PREFACE.

THIS little book is an attempt to present to the English reader a critical summary of the results of the science now commonly called criminal anthropology. In other words, it deals briefly with the problems connected with the criminal as he is in himself and as he becomes in contact with society; it also tries to indicate some of the practical social bearings of such studies.

During the last fifteen years these studies have been carried on with great activity. It seemed, therefore, that the time had come for a short and comprehensive review of their present condition. Such a review of a young and rapidly growing science cannot be expected to reveal any final conclusions; yet by bringing together very various material from many lands, it serves to show us how we stand, to indicate the progress already made, and the nature of the path ahead. In these matters we in England have of recent years fallen far behind; no book, scarcely a solitary magazine article, dealing with this matter has appeared among us. It seemed worth while to arouse interest in problems which are of personal concern to every citizen, problems which

are indeed the concern of every person who cares about the reasonable organisation of social life.

I would willingly have given the task to abler hands. But I found no one in England who was acquainted with the present aspects of these questions, and was compelled, therefore, after considerable hesitation, to undertake a task which had long appealed to me from various sides, medical, anthropological, and social.

There is, I believe, nothing original in this book. It simply represents a very large body of intelligent opinion in many countries. I have to acknowledge with gratitude the assistance, always ungrudgingly rendered, which I have received from very many directions. I would specially mention those medical officers of prisons in Great Britain who answered my Questions issued at the beginning of 1889, Dr. Hamilton Wey of the Elmira Reformatory, Dr. Vans Clark, formerly Governor of Woking Prison, Professor Lombroso of Turin, Dr. Antonio Marro, the Rev. J. W. Horsley, Dr. Langdon Down, Dr. Hack Tuke, Dr. Francis Warner, etc. It would, however, be impossible to enumerate all those to whom I am indebted. In such a task as this the writer himself has the smallest part; the chief shares belong to an innumerable company of workers, known and unknown.

H. E.

THE CRIMINAL.

CHAPTER I.

INTRODUCTION.

OF criminals, actual or nominal, there are many kinds. It is necessary, first of all, to enumerate the chief varieties.

There is the *political criminal*. By this term is meant the victim of an attempt by a more or less despotic Government to preserve its own stability. The word "criminal" in this expression is usually a euphemism to express the suppression of a small minority by the majority. The aims of the "political criminal" may be anti-social, and in that case he is simply an ordinary criminal, but he is not necessarily guilty of any anti-social offence; he simply tries to overturn a certain political order which may itself be anti-social. Consequently the "political criminal" of our time or place may be the hero, martyr, saint, of another land or age. The political criminal is, as Lombroso calls him, "the true precursor of the progressive movement of humanity;" or, as Benedikt calls him, the *homo nobilis* of whom the highest type is Christ. From any scientific point of view the use of the word crime,

to express a difference of national feeling or of political opinion, is an abuse of language. Such a conception may be necessary to ensure the supremacy of a Government, just as the conception of heresy is necessary to ensure the supremacy of a Church; the prison for political dissentients corresponds to the stake for religious dissentients. A criminality which is regulated partly by chronology, partly by longitude, does not easily admit of scientific discussion.

We have, again, the *criminal by passion*. He is usually a man of wholesome birth and of honest life, possessed of keen, even exaggerated sensibilities, who, under the stress of some great, unmerited wrong, has wrought justice for himself. Stung to sudden madness by some gross insult to his wife or wrong to his daughter, he makes an attempt on the life of the offender. The criminal by passion never becomes a recidivist; it is the social, not the anti-social, instincts that are strong within him; his crime is a solitary event in his life. Therefore he cannot figure as a serious danger to society; in some respects he serves even to quicken the social conscience and to check anti-social instincts. At the same time it is not to the advantage of society that a private individual should in a moment of passion even wreak justice; and the criminal by passion cannot complain that he in his turn becomes the victim of a social reaction.

We have also the *insane criminal*; that is to say, the person who, being already in a condition of recognisable mental alienation, performs some flagrantly anti-social act. A very large number of crimes are committed by persons who are impelled by delusions,

or who have, before the commission of the crime, been in a condition of mental alienation. Nearly a hundred persons every year in this country are sent to prison to be found insane on admission. The hanging of persons who are afterwards generally regarded as insane has always, and is still, frequently carried on. In Germany Dr. Richter has shown that out of 144 lunatics who were, as was afterwards shown, at the date of their crimes in the highest degree insane, only 38 were recognised as insane before the judge—*i.e.*, 106 madmen were, on account of their madness, condemned to severe punishment. Out of 100 insane persons brought to the bar of justice only 26 to 28 are recognised as insane.¹ The insane criminal is clearly in a category of his own. He is only a criminal in the same sense as an infant or an animal who performs some noxious act. The lunatic may be influenced by the same motives that influence the sane person, but he is at the same time impelled by other motives peculiar to himself, and to which we may have no means of access. To bring all the solemn formalities of law to bear against a madman, and to condemn him to severe punishment, is in a civilised country unreasonable.

The political criminal may usually be recognised without difficulty when we lay aside political prejudice; the criminal by passion can be recognised at once when we know his history. There is not usually much difficulty in ascertaining the insanity of the criminal who is insane in the strict and perhaps the only legitimate sense of the word—*i.e.*, intellectually

¹ Sander and Richter, *Die Beziehungen zwischen Geistesstörung und Verbrechen*. See also Lombroso, *L'Uomo Delinquente*, vol. ii., part 3, ch. 1, for many facts and figures concerning criminal insanity.

insane. But at this point we are no longer able to proceed with quite the same clearness and certainty. We are approaching the criminal in the proper sense, the criminal with whom we shall be chiefly concerned.

The uncertainty on this borderland may be illustrated by the following case. W. T. is a boy of fifteen, a very small ugly-looking lad, with a small head, low in the forehead, larger in the back, high narrow palate, heavy sullen aspect, and slight external squint of left eye. His father and mother are healthy and sober people; one of the father's uncles died in an asylum, and one of his aunts committed suicide. The boy had convulsions at the age of eighteen months, and was very backward in walking and speaking; at the age of twelve he could not dress himself. At school he was very dull, apt to strike his companions if roused, solitary, fond of reading, but not remembering what he had read. His schoolmaster, an experienced teacher, had never known so peculiar a boy. But he was not a bad or untruthful lad, and had no vices. When he left school his father tried to teach him his own trade of shoemaking; but, though he had no special distaste for the work, he could not learn even the most elementary part of the trade. Other boys made fun of him, and he complained of his little sister, ten years of age, doing the same. One day, when he had been left quietly sitting alone with this sister, he took up his father's hammer, which was at his feet, and struck her, smashing in her skull. Then he locked the back door, as he always did on leaving home, and went out, closing the front door after him. He returned in an hour, wet from the rain which had begun to fall. He was taken to prison,

and from the first displayed no emotion ; he ate and slept well, and was a good, docile boy. The judge who tried him (Lord Coleridge) was evidently in favour of a verdict of manslaughter. The jury fell in with this suggestion, although the authority of Dr. Savage was in favour of insanity, and the boy was condemned to ten years' penal servitude.¹ Such a case shows very well the inaccuracy of our hard and fast lines of demarcation. Here was a person clearly of abnormal or degenerate character, and liable to sudden violent impulses ; he would nowhere be popularly recognised as insane, and possibly it is not desirable that he should be so recognised. On the other hand, he cannot correctly be termed an instinctive criminal ; he is on the borderland between the two groups, and a touch may send him in either direction.

Let us take another illustration. Miss B., nineteen years of age, the daughter of a captain in the army, is described as a tall robust-looking girl of lively temperament. When a few months old she had an attack of meningitis. As a child she was always wilful and troublesome. When she was eighteen years old she developed new instincts of mischief. She would sometimes take off her clothes, stuff them up the chimney, and set fire to them. When the servants rushed in she would be sitting on the hearth clapping her hands : "What a fine blaze !" She had frequently destroyed furniture, clothing, and books ; she liked to cut carefully the strings binding a book, so that it would fall to pieces in the hands of the unsuspecting person who took it up. She drenched a baby, and frequently her own room, with water,

¹ *Journal of Mental Science*, October 1889. This case may be compared with that of Maria Köster, given in the Appendix D, vi.

without any reason. She once attempted to throttle the attendant in whose care she was put. She was backward for her age, though her education had not been neglected; she could not keep accounts, and was fond of reading children's books. There was a history of bad sexual habits, and she had a propensity to fall in love with every man she saw. She was perfectly coherent and rational, and accused others of doing the mischievous acts attributed to her. After being sent to a clergyman's house for some months she eventually recovered.¹ Here there was, strictly speaking, no insanity; there were vicious and criminal instincts which would no doubt have developed had the girl been sent to prison instead of to a comfortable home, and there was (as there very frequently is among instinctive criminals) a history of brain mischief. How shall we classify her?

Let us take another example—this time from France—in which the pathological element does not clearly appear. A gentleman named X., the French paper informs us, has been passing the summer at his country house with his daughter, aged twenty-two, and his son, aged twenty. From the moment of his arrival devastations occurred everywhere on his property. The shrubs were cut; garden plants and large branches of the birch trees removed; the doors and walls of the house were soiled. The grounds and dwellings of other persons in the neighbourhood were similarly treated. Windows were broken; the emblems of religion were outrageously insulted; the walls and doors of the church, the priest's house, and even the altar, were soiled with ordure. A drawing of the priest administering the sacrament to a cow was

¹ Dr. H. Sutherland, *West Riding Asylum Reports*, vol. vi.

found on the walls, and obscene letters, containing also menaces of death and incendiarism, were received by M. X., the priest, and others. Terror overspread the parish, and no one dared to go out by night. At last M. X.'s son and daughter were discovered in the act. Alexis, the least guilty, having been drawn on by his sister, confessed his part in what had been done; he was the accomplice and confidant of his sister. She denied everything, even that she had aided her brother. There was no motive for these acts, save the pleasure of spreading terror through the country; they had had no intention of accomplishing their threats. The girl carried her impudence and imprudence so far as to send an insulting letter to the magistrate who was investigating her misdeeds, and to break windows, unperceived, in his presence.¹ This is an example of moral perversity, showing itself in malevolent and unsocial acts. Possibly, if we possessed a scientific history of the case, we might find a pathological element in it, but as it stands it is but an extravagant example of anti-social instincts, on the borderland of crime, which in a minor degree are far from uncommon.

I will now give, in some detail, the history of a more decisive and significant example of this same moral insensibility. It is in a child, and I take it from German records. Marie Schneider, a school-girl, twelve years of age, was brought before the Berlin Criminal Court in 1886. She was well developed for her age, of ordinary facial expression, not pretty, nor yet ugly. Her head was round, the forehead receding slightly, the nose rather small, the eyes brown and lively, the smooth, rather fair hair combed back.

¹ Quoted by Despine, *Psychologie Naturelle*.

With an intellectual clearness and precision very remarkable for her age, she answered all the searching questions put by the President of the Court without hesitation or shrinking. There was not the slightest trace of any inner emotion or deep excitement. She spoke in the same quiet equable tone in which a school-girl speaks to her teacher or repeats her lesson. And when the questions put to her became of so serious a character that the judge himself involuntarily altered his voice and tone, the little girl still remained self-possessed, lucid, childlike. She was by no means bold, but she knew that she had to answer as when her teacher spoke to her, and what she said bore the impress of perfect truth, and agreed at every point with the evidence already placed before the court. Her statement was substantially as follows:—"My name is Marie Schneider. I was born on the 1st of May 1874, in Berlin. My father died long ago, I do not know when; I never knew him. My mother is still living; she is a machinist. I also have a younger brother. I lost a sister a year ago. I did not much like her, because she was better than I, and my mother treated her better. My mother has several times whipped me for naughtiness, and it is right that I should take away the stick with which she beat me, and to beat her. I have gone to school since I was six years old. I have been in the third class for two years. I stayed there from idleness. I have been taught reading, writing, arithmetic, geography, and history, and also religion. I know the ten commandments. I know the sixth: it is, 'Thou shalt not kill.' I have some playfellows at school and in the neighbourhood, and I am often with a young lady [believed to be of immoral life] who is twenty years old and

lives in the same house. She has told me about her childhood, and that she was just as naughty as I am, and that she struck the teacher who was going to punish her. Some time ago, in playing in the yard, I came behind a child, held his eyes, and asked him who I was. I pressed my thumbs deep in his eyes, so that he cried out and had inflamed eyes. I knew that I hurt him, and, in spite of his crying, I did not let go until I was made to. It did not give me special pleasure, but I have not felt sorry. When I was a little child I have stuck forks in the eyes of rabbits, and afterwards slit open the belly. At least so my mother has often said; I do not remember it. I know that Conrad murdered his wife and children, and that his head was cut off. I have heard my aunt read the newspapers. I am very fond of sweets, and have several times tried to get money to buy myself sweets. I told people the money was for some one else who had no small change. I know that that was deceit. I know too what theft is. Any one who kills is a murderer, and I am a murderess. Murder is punished with death; the murderer is executed; his head is cut off. My head will not be cut off, because I am still too young. On the 7th of July my mother sent me on an errand. Then I met little Margarete Dietrich, who was three and a half years old, and whom I had known since March. I said to her that she must come with me, and I took her hand. I wanted to take away her ear-rings. They were little gold ear-rings with a coloured stone. I did not want the ear-rings for myself, but to sell at a second-hand shop in the neighbourhood, to get money to buy some cakes. When I reached the yard I wanted to go somewhere, and I called to my

mother to throw me down the key. She did so, and threw me down some money too, for the errand that I was to go on. I left little Margarete on the stairs, and there I found her again. From the yard I saw that the second-floor window was half open. I went with her up the stairs to the second floor to take away the ear-rings, and then to throw her out of the window. I wanted to kill her, because I was afraid that she would betray me. She could not talk very well, but she could point to me ; and if it came out, my mother would have beaten me. I went with her to the window, opened it wide, and set her on the ledge. Then I heard some one coming down. I quickly put the child on the ground and shut the window. The man went by without noticing us. Then I opened the window and put the child on the ledge, with her feet hanging out, and her face turned away from me. I did that because I did not want to look in her face, and because I could push her easier. I pulled the ear-rings out. Grete began to cry because I hurt her. When I threatened to throw her out of the window she became quiet. I took the ear-rings and put them in my pocket. Then I gave the child a shove, and heard her strike the lamp and then the pavement. Then I quickly ran downstairs to go on the errand my mother had sent me. I knew that I should kill the child. I did not reflect that little Grete's parents would be sorry. It did not hurt me ; I was not sorry ; I was not sorry all the time I was in prison ; I am not sorry now. The next day a policeman came to us and asked if I had thrown the child out of the window. I said no, I knew nothing about it. Then I threw away the ear-rings that I had kept hid ; I was afraid they would search my pockets and find

them. Then there came another policeman, and I told him the truth, because he said he would box my ears if I did not tell the truth. Then I was taken away, and had to tell people how it happened. I was taken in a cab to the mortuary. I ate a piece of bread they gave me with a good appetite. I saw little Grete's body, undressed, on a bed. I did not feel any pain and was not sorry. They put me with four women, and I told them the story. I laughed while I was telling it because they asked me such curious questions. I wrote to my mother from prison, and asked her to send me some money to buy some dripping, for we had dry bread." That was what little Marie Schneider told the judge, without either hesitation or impudence, in a completely childlike manner, like a school-girl at examination; and she seemed to find a certain satisfaction in being able to answer long questions so nicely. Only once her eyes gleamed, and that was when she told how in the prison they had given her dry bread to eat. The medical officer of the prison, who had watched her carefully, declared that he could find nothing intellectually wrong in her. She was intelligent beyond her years, but had no sense of what she had done, and was morally an idiot. And this was the opinion of the other medical men who were called to examine her. The Court, bearing in mind that she was perfectly able to understand the nature of the action she had committed, condemned Marie Schneider to imprisonment for eight years. The question of heredity was not raised. Nothing is known of the father except that he is dead.¹

¹ Appendix by Dr. Paul Lindau to German translation of Lombroso, *Der Verbrecher*.

Marie Schneider differs from the previous cases, not merely by her apparent freedom from pathological elements, but by her rational motives and her intelligence. The young French woman intended nothing very serious by her brutal and unfeeling practical jokes. Marie Schneider was as thorough and as relentless in the satisfaction of her personal desires as the Marquise de Brinvilliers. But she was a child, and she would very generally be described as an example of "moral insanity." It is still necessary to take a further step, although a very slight one, to reach what every one would be willing to accept as an instinctive criminal. The example I will select is an Englishman, Thomas Wainewright, well known in his time as an essayist, much better known as a forger and a murderer. R. Griffiths, LL.D., Wainewright's maternal grandfather—to take his history as far back as possible—was an energetic literary man and journalist, whose daughter, Ann, born of a young second wife when he was well past middle life, "is supposed to have understood the writings of Mr. Locke as well as perhaps any person of either sex now living" (said the *Gentleman's Magazine*), and who married one Thomas Wainewright, and died in child-bed at the age of twenty-one, the last survivor, even at that age, of the second family. Thomas Wainewright, the father, himself died very soon afterwards. Of him nothing is known, though there is some reason to think that Dr. Griffiths regarded him with dislike or suspicion.

The child seems then to have been born of a failing and degenerating stock. He was clever, possessed of some means, and grew up in a literary and artistic circle; but he was vain and unstable, "ever to be

wiled away," as he says himself, "by new and flashy gauds." When still a lad, he went into the army for a time. Then, after a while, being idle in town, "my blessed Art touched her renegade; by her pure and high influences the noisome mists were purged," and he wept tears of happiness and gratitude over Wordsworth's poems. "But this serene state was broken," he wrote, several years before his career of crime had commenced, "like a vessel of clay, by acute disease, succeeded by a relaxation of the muscles and nerves, which depressed me

—'low

As through the abysses of a joyless heart
The heaviest plummet of despair could go,'—

hypochondriasis! ever shuddering on the horrible abyss of mere insanity! But two excellent secondary agents—a kind and skilful physician, and a most delicately affectionate and unwearied (though young and fragile) nurse—brought me at length out of those dead black waters, nearly exhausted with so sore a struggle. Steady pursuit was debarred me, and varied amusement deemed essential to my complete revivification." Then he began to write his essays and criticisms, dealing chiefly with the later Italian and the French artists, under the name of Janus Weathercock. He was a man of many sentimentalities and super-refinements; he hated all vulgarity and "sordid instincts." His tastes were sensual in every respect. Notwithstanding his means, they were not sufficient to satisfy his desires for luxurious foods and drinks, for fine perfumes, for large jewels to wear. He could not live without luxuries, just as little Marie Schneider could not live without sweets. At about the date that his chief

literary activities ceased, and when he was about thirty years of age, he forged a power of attorney with the names of his trustees, assigning to himself the principal of £5000, of which he was enjoying the interest. This was then a capital offence; it remained undetected for twelve years. He is described at this time as "a smart, lively, clever, heartless, voluptuous coxcomb." He was tall, stooping slightly, of dark hair and complexion, deeply set eyes, stealthy but fascinating, a large and massive head. He married a young lady who was poor, but a gay and brilliant person, and she had a widowed mother and two half-sisters. The young couple lived improvidently, and an uncle, Mr. G. E. Griffiths, who was well off, offered them a home in his own house. This welcome offer was accepted. A year after, Mr. G. E. Griffiths, after a short illness, died very unexpectedly, leaving his mansion and property to his nephew and niece. This money, however, also went rather fast; and now too there were no longer any expectations from relatives. The stepmother and her daughters, the Abercrombies, were poor, and their schemes to make a living were not successful. The Abercrombies were obliged to come and live with the Wainewrights in the large mansion they had inherited, and a very few months after this Mrs. Abercrombie died, like old Mr. Griffiths, very suddenly, in a fit of convulsions. No benefits, however, followed this death; affairs continued to grow worse, and soon the bailiffs were in the house, and there was a bill of sale on the furniture. The Wainewrights and Abercrombies migrated to handsome lodgings in Conduit Street, near Regent Street. They frequently went to the play, and one night, very soon after their arrival, Helen Abercrombie, who wore

the thin shoes that women then always wore, got her feet wet, became ill, and was assiduously attended by Wainewright and his wife, who held frequent consultations as to her treatment by means of certain powders; in a few days she was dead, with the same symptoms as her mother, the same symptoms as Mr. Griffiths—"brain mischief," the doctor called it. She died on the very day on which the bill of sale became due, and after her death it was found that her life had, during the same year, been insured, in various offices, for £18,000. Helen Abercrombie was a beautiful and very healthy girl, and her death led to suspicions, and gave rise to law-suits, which on the slighter but definite ground of misrepresentation were in favour of the companies. In the meanwhile Wainewright found it convenient to leave England (he had separated from his wife after the death of Helen Abercrombie), and took refuge with a rather impecunious gentleman who lived with his daughter at Boulogne. He persuaded this gentleman to obtain money to effect a loan by insuring his life. One night, after the policy had been effected, this gentleman suddenly died. We next hear of Wainewright travelling in France, doubtless for excellent reasons, under an assumed name. He fell into the hands of the police, and not being able to give a good account of himself, was imprisoned for six months. The French police found that he carried about with him a certain powder, at that time little known, called strychnine; this was put down to English eccentricity. At this time there was a warrant out against Wainewright for forgery; he was lured over to England by a detective, with the aid of a woman, and arrested. He was tried for forgery, and condemned to transport-

ation for life. At the same time the suspicions of the doctor who attended Helen Abercrombie were roused, and Wainewright himself, after his condemnation, admitted to visitors, with extraordinary vanity and audacity, his achievements in poisoning, and elucidated his methods. It is also said that he kept a diary in which he recorded his operations with much complacency. The one thing that hurt little Marie Schneider was the dry bread; the one thing that moved Wainewright was being placed in irons in the hold of the ship. "They think me a desperado! Me! the companion of poets, philosophers, artists, and musicians, a desperado! You will smile at this—no, I think you will feel for the man, educated and reared as a gentleman; now the mate of vulgar ruffians and country bumpkins." At Hobart Town on two occasions he endeavoured to remove by poison persons who had excited his animosity. He is described at this time by one who knew him well as "a man with a massive head, in which the animal propensities were largely developed. His eyes were deeply set in his head; he had a square solid jaw; he wore his hair long, stooped somewhat, and had a snake-like expression which was at once repulsive and fascinating. He rarely looked you in the face. His conversation and manner were winning in the extreme; he was never intemperate, but nevertheless of grossly sensual habits, and an opium-eater. As to moral character, he was a man of the very lowest stamp. He seemed to be possessed by an ingrained malignity of disposition which kept him constantly on the very confines of murder, and he took a perverse pleasure in traducing persons who had befriended him. He was a marked man in Hobart

Town—dreaded, disliked, and shunned by everybody. His sole living companion was a cat, for which he evinced an extraordinary affection.” He died of apoplexy in 1852, at the age of fifty-eight.¹ Wainewright presents to us a perfect picture of the instinctive criminal in his most highly developed shape, fortunately a rare phenomenon. It is this instinctive propensity to crime which is sometimes called “moral insanity.” This is, however, by no means a happy phrase, since it leads to much fruitless disputation. It is wiser at present to apply to such an individual the more simple term, *instinctive criminal*.² There is, however, distinct interest in noting that at one period of his life Wainewright was on the verge of insanity, if not, as is more likely, actually insane; it is extremely probable that he never recovered from the effects of that illness. It may well be that if we possessed a full knowledge of every instinctive criminal we should always be able to put our hands on some definite organically morbid spot.

The instinctive criminal, in his fully developed form, is a moral monster. In him the absence of guiding or inhibiting social instincts is accompanied by unusual development of the sensual and self-seeking impulses. The *occasional criminal*, as he is usually called, is a much commoner and more normally constituted person. In him the sensual instincts need not be stronger than usual, and the social elements, though weaker than usual, need not

¹ See Introduction by W. C. Hazlitt to Wainewright's *Essays and Criticisms*, 1880.

² Lombroso and some other authorities prefer the term “born criminal,” or “congenital eriminal” (*reo-nato*). The term “instinctive eriminal” seems to be safer, as it is not always possible to estimate the congenital element.

be absent. Weakness is the chief characteristic of the occasional criminal; when circumstances are not quite favourable he succumbs to temptation. Occasional crime is one of the commonest forms of crime; it is also that for whose existence and development society is most directly responsible; very often it might equally well be called social crime. Here is an example. Two lads of honest life, the sons of agricultural labourers, being unable to obtain a scanty subsistence at home, start one day in a fit of desperation for a distant town in search of work. Without food or shelter, sleeping under a hedge, they reach a farm-house. Looking through a window they see a plum-pudding; they open the window, seize the pudding, and go a few yards off to devour it. In a few hours they are on the way to the lock-up, to receive, later on, a sentence of six months' imprisonment. "At the close of it they were provided with an outfit and an introduction to an employer of labour in Canada; and when we last heard of them they were doing extremely well, with excellent prospects before them."¹ This sequel (which would have been better had it come before the seizure of the plum-pudding) proves that we are not dealing with instinctive criminals. Take another case mentioned by the same writer. A woman with a drunken husband who spends his last penny in the public-house, is driven by actual starvation to commit her first crime. She steals a small piece of meat to feed her hungry children. She is sent to prison. "We heard of her afterwards leading a most consistent and almost saintly life." These persons, it is clear, were not the criminals but the victims; society was

¹ *Scenes from a Silent World.* By a Prison Visitor. 1889.

the criminal. Now and then, as in the cases just cited, it happens that the occasional criminal who is thus recklessly flung into prison is assisted to live a human life. In the great majority of cases he is ruined for life, familiarised with the prison, introduced to bad company. We have, as well as we are able, manufactured him into what is called the *habitual criminal*.

The steps by which the occasional criminal, aided on the one hand by neglect, on the other by the hot-bed of the prison, develops into the habitual criminal are slow and subtle; that is one of the tragedies of life. M. Joly has recorded the experiences of the police concerning the thefts that take place at the great Parisian shops, the Louvre, and the Bon-Marché. "This is the beginning. From a gallery one sees a woman—rich or well-to-do—who buys a certain number of objects and pays for them; but without asking permission she takes some little, almost insignificant object—a little ribbon to fasten a parcel, a more commodious paper-bag. No one will say that she is stealing; no one will think of speaking to her or disturbing her. But she is observed and even watched, for one expects to see her again some time after taking, as she walks along, say, a flower worth twenty-five centimes. A little later she will appropriate an article of greater value, and henceforth she will take for the pleasure of taking. The inclination, which at the beginning had in it nothing instinctive or fatal, will grow as all habits grow. Another time a woman who had no intention of stealing, but whose conscience is probably elastic, grows impatient at the delay in attending to her wants. It is, let us suppose, a purse worth ninety-

five centimes, and the shopman is busy with purchasers of more expensive objects. Suddenly the woman nervously yields to a swift temptation; she does not wish to wait longer, but instead of replacing the purse on the counter she slips it into her pocket and turns on her heels without paying. 'From that moment,' said the inspector, '*she is lost*; she will come back to steal, but she will steal intentionally and deliberately.'"¹

The world and the criminal's friends are startled some day by a great crime, but that crime is linked on to a chain of slight, occasional, sporadic vices and offences. Sometimes we can trace out these links. Barré and Lebiez were two young French criminals who attracted attention some years ago. They were both of good family, both very intelligent, the former about to enter on a commercial life, the latter on the eve of becoming a doctor of medicine. At this point they murdered an old woman to rob her, and cut up the body to dispose of it. The crime was deliberate and carefully prepared; there was nothing romantic or obviously morbid about it, and a few days after the crime Lebiez delivered an able and eloquent lecture on Darwinism and the Church. In each of these young men there were, M. Joly observes, nine stages in the path of crime. Let us first note those of Barré:—1. His employer is obliged to dismiss him on account of misconduct with a servant girl. 2. He writes untruthful letters to his family, describing habits of work which do not exist. 3. He acquires an extravagant taste for speculation on the Stock Exchange. So far his course, though not exemplary, was one that has often enough been traversed by

¹ H. Joly, *Le Crime*, 1888, p. 269.

persons who have never reached the scaffold. 4. He speculates with the savings which two girls had entrusted to him for investment. 5. To obtain money from his father, to whom he talks of establishing himself, he forges letters. 6. He embezzles various sums of money by an aggravated form of the same process. 7. He steals a watch from a prostitute's rooms. 8. He steals eight francs from the same. 9. He decides on the murder of the old milk-woman with whom he has had business relations, and whose savings, as he knows, are considerable. Lebiez went through the following stages:—1. His violent language to his mother is remarked. 2. He is, notwithstanding very small means, known to be living with a mistress, and he procures obscene photographs. 3. On account of irregularity he is sent away from an institution where he gave lessons. 4. He speculates on the Stock Exchange, which, being poor, he could only do by accepting profit and refusing to meet loss. 5. He steals books from his friends and sells them. 6. He several times leaves his lodgings clandestinely, without paying the rent. 7. He participates in the theft of the watch by Barré. 8. He shares the profits of the second theft. 9. They decide on the murder together. Such are the slow steps by which the occasional criminal becomes the *habitual criminal* or the *professional criminal*. It must be remembered that the lines which separate these from each other, and both from the instinctive criminal, are often faint or imperceptible. "Natural groups," as Mr. Galton remarks, "have nuclei but no outlines." In the habitual criminal, who is usually unintelligent, the conservative forces of habit predominate; the professional criminal, who is usually intelligent, is guided

by rational motives, and voluntarily takes the chances of his mode of life ; while in the instinctive criminal the impulses usually appear so strong, and the moral element so conspicuously absent, that we feel we are in the presence of a natural monster. It is not, however, always possible to make these distinctions.

The professional criminal, though not of modern development, adapts himself to modern conditions. In intelligence, and in anthropological rank generally, he represents the criminal aristocracy. He has deliberately chosen a certain method of earning his living. It is a profession which requires great skill, and in which, though the risks are great, the prizes are equally great.¹

Lacenaire, a famous criminal of the beginning of the century, has sometimes been regarded as the type of the professional criminal, and to complete this classificatory outline it may be well to sketch his career. He was born at Lyons about the beginning of the century, received a good average education, and was very intelligent, though not distinguishing himself at college. He was ambitious and, at the same time, incapable of sustained work. He came to Paris to study law ; but his father's resources were inadequate, and he became a clerk, frequently changing his situation, growing tired of work at length, and engaging as a soldier. So far no offence is recorded. When he returned to France his father, become bankrupt, had

¹ Whoever wishes to study the modern professional criminal and his methods should consult Inspector Byrnes' *Professional Criminals of America*. It is not a scientific work, and has no reference to anthropologic methods, but it contains a very large and valuable series of photographs of contemporary criminals of note, with a sketch of the career of each.

fled. Some friends came to the young man's help, and gave him 500 francs. He hastened to Paris and spent it in enjoyment. Then he entered the literary Bohemia, and wrote verses and political articles, fighting a duel with a nephew of Benjamin Constant and killing him. He said, later on, that the sight of his victim's agony had caused him no emotion. Soon his love of enjoyment outran his means of getting money, though these might have been considerable had he cared to work steadily, and he obtained money by theft and swindling. Condemned to prison, he soon formed connections with professional criminals, and associated them in his schemes and joined them in their orgies. He adopted false names, multiplied forgeries and disguises, and preyed actively on society. After an orgy at this time he committed a murder, and he attempted to murder a man who had won a large sum from him in gambling. The crime and the attempt both remained unpunished. Gifted with intelligence, and still more with vanity and audacity, Lacenaire continued his career of systematic crime until finally he met the guillotine. He was a professional criminal, but also, it will be seen, he was something of an habitual, something of an instinctive criminal.¹

We have glanced briefly at the circles of crime—circles that extend from heaven to very murky depths of hell, and that yet are not far from any one of us. It is still necessary to touch on the various ways in which the causes and nature of this vast field of crime may be approached.

¹ The classification of criminals adopted in this chapter corresponds substantially with that of Professor Enrico Ferri, by him recognised as provisional. It is also, I find, almost identical with Dr. Colajanni's.

There are, first, the *cosmic* causes of crime ; that is to say, all the influences of the external inorganic world, the influence of temperature on crime, the increase of crimes of violence in hot weather, the periodicity of other kinds of crime, the influence of climate, the influence of diet.

Then there is the *biological* factor. Under this head we include the consideration of all the personal peculiarities of the individual, anatomical, physiological, psychological. These peculiarities may be atavistic, atypic, or morbid.

Lastly, there is the *social* factor in crime. Criminal sociology deals with the production of crime by social influences, and by economic perturbations. Infanticide is nearly always related to the social factor ; and the study of the various social influences which promote or hinder infanticide is extremely instructive. The relations between crimes against the person and the price of alcohol, and between crimes against property and the price of wheat, also belong to this department of the study of crime. Society prepares crimes, as Quetelet said ; the criminal is the instrument that executes them. "The social environment," Lacassagne has well said, "is the cultivation medium of criminality ; the criminal is the microbe, an element which only becomes important when it finds the medium which causes it to ferment : *every society has the criminals that it deserves.*"

It is impossible to over-estimate the importance of the social factor in crime. To some extent it even embraces the others, and can be made to regulate and neutralise them. But we cannot deal wisely with the social factor of crime, nor estimate the vast importance of social influences in the production or

prevention of crime, unless we know something of the biology of crime, of the criminal's anatomical, physiological, and psychological nature. This book is concerned with the study of the criminal man.

CHAPTER II.

THE STUDY OF THE CRIMINAL.

WHEN Homer described Thersites as ugly and deformed, with harsh or scanty hair, and a pointed head, like a pot that had collapsed to a peak in the baking—

*ἄισχιστος δὲ ἀνὴρ ὑπὸ Ἴλιον ἦλθεν.
φορκὸς ἔην, χλωδὸς δ' ἕτερον πόδα. τῷ δὲ οἱ ὤμῳ
κυρτῷ, ἐπὶ στῆθος συνοχωκότε. αὐτὰρ ὑπερθεν
φοζὸς ἔην κεφαλὴν, ψεδνῆ δ' ἐπενήροθε λάχνη*

—he furnished evidence as to the existence of a criminal type of man. These physical characters of Thersites are among those which in these last days have been submitted to scientific observation, and to statistics, and have been largely justified. The epigrammatic utterances in which primitive peoples crystallise and pass on their philosophy and science, include many sayings which prove the remote period at which men began to perceive the organic peculiarities which separate the criminal man from the average man. There are some proverbs of this character, such as those indicating the widespread dislike of the red-haired, for which no solid justification has yet been found ; but among various races, and in many countries, numerous proverbs are in harmony with the results of modern research: *A*

vultu vitium, the old Roman saying ; *Au vis* [*visage*] *le vice*, the old French saying ; "Salute from afar the beardless man and the bearded woman ;" "Distrust the woman with a man's voice ;" "A pale face is worse than the itch." Such are a few that might be easily increased.

At a very early period such popular generalisations as these were embodied in that empirical science of physiognomy, which found many professors among the Greeks and Romans. According to the well-known story, a Greek physiognomist who examined Socrates' face judged that the philosopher was brutal, sensuous, and inclined to drunkenness ; and Socrates declared to his disciples that such, although he had overcome it, was his natural disposition. He was himself a physiognomist ; he disliked a certain man who was of pale and dark complexion, such signs, he said, indicating envy and murder ; the peculiar dark and pallid complexion of the instinctive criminal has of late years been frequently noted.

Aristotle, that great master of all the sciences, clearly recognised not merely the physiognomic signs of habits, vices, and crimes, including many signs that are in accordance with modern scientific observation, but he also observed a connection between the shape of the head and the mental disposition, and he recognised the hereditary character of vicious and criminal instincts. Galen, who inaugurated the experimental study of the brain, adopted the views of Aristotle, and pointed out the influence of the abuse of alcohol in the production of crime ; he was of opinion, also, anticipating a modern doctrine, that when the criminal is a criminal by nature he ought to

be destroyed, not in revenge, but for the same reason that scorpions and vipers are destroyed.¹

Although these feeble beginnings of criminal anthropology received the sanction of the highest scientific authorities, as well as of the people, and later on a mediæval law declared that if two persons fell under suspicion of crime the uglier or more deformed was to be regarded as more probably guilty, they were not universally admitted, and some, like Pliny, regarded it as absurd that the outward form could indicate the inward disposition. Whatever art or science there was in the matter was left, then and long after, to the physiognomists, of whom Polemon may be taken as a distinguished example, and these were ready to supply the most elaborate physical signs to correspond to any vicious or criminal disposition. Polemon wrote of the criminal that he was of pallid complexion, with long hair, large ears, and small eyes, and he proceeded to give the characteristics of various classes of criminals, his observations often showing keen insight. This pseudo-science was passed on from physiognomist to physiognomist, usually with added absurdities, until in the sixteenth century we reach the Neapolitan Dalla Porta, at once the greatest (and except Lavater

¹ Seneca also advocated, in a similar way, the removal without vengeance of noxious members of the social body: "At corrigi nequeunt, nihilque in illis lene aut spci bona capax est?—Tollantur e coetu mortalium facturi pejora quæ contingunt et quo uno modo possunt, desinant esse mali; sed hoc sine odio. Nam quis membra sua tunc odit eum abscidit? Non est illa ira, sed misera curatio. Rabidos effigimus canes, et trucem atque immansuetum bovem occidimus, et morbidibus pecoribus, ne gregem polluant, ferrum dimittimus. Nee ira sed ratio est, a sanis inutilia secernere."—*De Ira*, lib. i., cap. 15.

the last) of the physiognomists of the old school and the first of the new. He treated judicial astrology with contempt, and at the same time wrote a treatise of celestial physiognomy; he gathered up all that his predecessors had done, and at the same time laid the foundations of a more scientific treatment.

Passing by Lavater, with his fine intuition and genial humanity, which formed, however, no epoch in the scientific study of criminal anthropology, at the beginning of the present century we reach Gall, a very great figure in the history of science, and the representative of the most important moment in the development of our knowledge of the brain.

Before speaking of Gall, however, it is necessary to give a word, in passing, to Grohmann, who slightly preceded him, and who anticipated many of the conclusions relative to facial and cranial characteristics reached by modern criminal anthropologists. Thus, in 1820, he wrote:—"I have often been impressed in criminals, and especially in those of defective development, by the prominent ears, the shape of the cranium, the projecting cheek-bones, the large lower jaws, the deeply-placed eyes, the shifty, animal-like gaze."

Gall thrust aside for ever the credulous fancies of the physiognomists; and he has been described, not altogether without reason, as the founder of the modern science of criminal anthropology. He was certainly its most brilliant pioneer. Lavater believed in the homogeneity of the human organism, but he was not a man of science, and he had been content to study the surface of the body; Gall, with true scientific instinct, tried to get to the root of the matter; following the great English anatomist, Willis,

who had made some attempt at cerebral localisation, he studied the brain, sought to differentiate the functions of its various parts, and the effects of its varying development on the skull.

For Gall the varying development of the brain was the cause of the divergent mental and moral qualities of the individual ; he was firmly convinced that all the facts of psychical life are rooted in the physical organisation ; he wished to write the natural history of every primitive moral and intellectual force, in health as well as in disease. To the best of his ability he carried out this programme in detail, by an unceasing study of all the varieties of the brain and of the living head that he could find ; he pursued his studies throughout Europe, in lunatic asylums and in prisons, as well as among the ordinary population, and he foresaw the extent of the applications of the science he was opening up to medicine and to law, to morality and to education. While his work extended far beyond the borders of what we should now call criminal anthropology,¹ he devoted much attention to the problems of the criminal organisation, and even to its varieties, many of his observations according well with the results of recent investigation. More than this, following Galen and Diderot (who had written, fifty years earlier, "The evil-doer is one whom

¹ This is the term now generally used to signify the science of the criminal. It is, however, open to objection. "Criminal Psychology" has been suggested, but is somewhat narrow. Professor Liszt has proposed "Criminal Biology," and at the last International Congress of Criminal Anthropology, Topinard suggested "Criminology." "Criminal Anthropology," however, is so widely used that I have not ventured to introduce any substitute. The reader must remember that criminal anthropology, although related to general anthropology, is not merely a branch of that science.

we must destroy, not punish"), he clearly advocated a method of dealing with the criminal which is now widely regarded as the only right and reasonable method. "There can be no question," he said, "of culpability or of justice in the severe sense; the question is of the necessity of society preventing crime. The measure of culpability and the measure of punishment cannot be determined by a study of the illegal act, but only by a study of the individual committing it." In his great work, *Les Fonctions du Cerveau* (1822), Gall has summed up his conclusions.

It has been the misfortune of this great and truly scientific investigator to give origin to an empiric art of phrenology which took the place of the old art of physiognomy he had done so much to destroy. He has consequently, until recent years, been popularly known chiefly by his mistakes, especially perhaps by his localisation of the sexual instinct in the cerebellum—a localisation, however, which he supported by a large body of evidence. The influence of dubious phrenological doctrines hardened into a system somewhat impairs the value of Lauvergne's *Les Forçats* (1841), which seems to have been the first book of any importance devoted entirely to the study of convict nature, physical, moral, and intellectual. Lauvergne, who was the chief medical officer to the hospital for convicts at Toulon, appears to have been a man of humanitarian instincts, whose wit and *bon-homie* enabled him to maintain friendly relations with the criminals he was studying; he had little capacity for scientific analysis, but he wrote fully of what he had seen and known, and his book contains many keen observations which have been since verified.

He fully recognises also the importance of the social factor in the production of criminals.

Lauvergne had observed how many of his subjects were insane or diseased ; the students of the criminal who followed him all insisted on the pathological element. Dally maintained that the criminal and the lunatic are identical, and both equally irresponsible. Prosper Lucas, in his valuable *Traité philosophique de l'hérédité* (1847), showed how deeply rooted in the organism are the morbid tendencies of crime. Lélut compared the length and breadth of head in criminals. Voisin noted their defects in cerebral organisation. It was, however, Morel who, in his *Des Dégénérescences* (1857), chiefly developed this aspect of criminality, and his influence is still strong among French students of the criminal. Morel regarded crime as one of the forms taken on by degeneration in the individual or the family ; and degeneration he defined as "a morbid deviation from the normal type of humanity." The causes of degeneration which he recognised were intoxications, famines, social environment, industries, unhealthy occupations, poverty, heredity, pathological transformations, moral causes. "My principal aim," he says, "has been the study of these causes, and of the influences which they exercise, firstly on the constitution of individuals, and afterwards on that of their descendants." Among these causes he gives a chief place to the manifold effects on the children of alcoholism in the parents. In his pamphlet *De la Formation du Type dans les variétés dégénérées* (1864), Morel proposed to give the name of morbid anthropology to "that part of the natural science of man, the aim of which is to study the characters due to certain special diseased

influences, as well as to hereditary transmissions of bad nature."

Despine, by his great work, *Psychologie Naturelle* (1868), made a new and important step in criminology. Leaving aside the study of the criminal's physical nature, he sought to make an exhaustive study of his mental nature. No one has done more than Despine to prove that what we should now call the instinctive criminal is, on the psychological side, a natural anomaly, a mental monstrosity. He brought into clear relief the unforeseeing imprudence, the entire lack of moral sensibility and of remorse, which characterise the instinctive criminal. He recognised that the criminal is not necessarily an insane or diseased person, and he showed that his abnormality is not of the kind that intellectual education can remedy. "No physiologist," he said, "has yet occupied himself with the insanity of the sane;" he considered the criminal as "morally mad," and therefore irresponsible. Maudsley, from an opposite philosophic standpoint, came to very similar conclusions. Without bringing any fresh contribution of importance, he re-affirmed emphatically the conclusions already reached. Speaking in his *Responsibility in Mental Disease* (1872) of instinctive criminals, he remarks, "It is a matter of observation that this criminal class constitutes a degenerate or morbid variety of mankind, marked by peculiarly low physical and mental characteristics." Like Despine, he drew from this the conclusion, since widely accepted, that the criminal, being morally insane and usually incurable, should be treated in the same way as the intellectually insane person. "If the matter be considered deeply, it may appear that it would, perhaps, in the end make little difference

whether the offender were sentenced in anger and sent to the seclusion of prison, or were sentenced more in sorrow than in anger, and consigned to the same sort of seclusion under the name of an asylum. The change would probably not lead to an increase or to a decrease in the number of crimes committed in a year." An artist as much as a man of science, master of a sombre and weighty style, illumined by vivid flashes of imagination, Maudsley by his numerous works popularised the new ideas, and is justly regarded abroad as a pioneer of criminal anthropology.

Broca, who, by initiating the Anthropological Society of Paris in 1859, has been regarded as the founder of the modern science of anthropology, gave attention also to the special science of criminal anthropology by noting the peculiarities of the skulls and brains of criminals. At the Exeter meeting of the British Association in 1869, Dr. G. Wilson read a paper on "The Moral Imbecility of Habitual Criminals as exemplified by cranial measurements." He had measured 464 heads of criminals, and found that habitual thieves presented well-marked signs of insufficient cranial development, specially anteriorly. "The cranial deficiency," he observed, "is associated with real physical deterioration. Forty per cent. of all the convicts are invalids, more or less; and that percentage is largely increased in the professional thief class." He argued that a prisoner must be treated on reforming principles, and not allowed unrestricted liberty until there was reasonable evidence to show that he would not prove dangerous to society. About the same time, also (in 1870), J. Bruce Thomson, Resident-Surgeon to the General

Prison for Scotland at Perth, published in the *Journal of Mental Science* a summary of his observations on over 5000 prisoners. From the decisiveness of his utterances and the large number of prisoners of whom he was able to speak, this summary gave a stimulus to the study of the criminal throughout Europe. Thomson enumerated some of the physical characteristics of the instinctive criminal now generally recognised, pointed out the semi-imbecility prevalent among the juvenile criminals under his observation, the frequency of accumulated morbid appearances at *post-mortem* examinations, and the large proportion of cases at Perth needing treatment for mental diseases soon after admission, "apparently from congenital causes." Thomson's facts and opinions were too curtly, and, probably, too emphatically stated. Dr. Nicolson, writing also in the same journal from 1873 to 1875, dealt with the morbid psychology of the criminal, the unstable, emotional element in him, his proneness to delusions, his insensibility, and his weak-mindedness. Dr. Nicolson's papers, all written before the latest and most fruitful era of criminal anthropology began, were, so far as I have been able to trace, the latest original contributions from the scientific side made in England to the study of the criminal. Such knowledge as has been furnished since has come from writers who have, almost of necessity, dealt with what may be called the mental and social symptomatology of criminals. Among the books which supply more or less valuable or interesting information of this kind may be mentioned the Rev. J. W. Horsley's *Jottings from Jail*, Michael Davitt's *Leaves from a Prison Diary*, and the *Scenes from a*

Silent World, by a Prison Visitor, which appeared in *Blackwood's Magazine* during 1889. An earlier book of this class, Mayhew's *London Labour and the London Poor* (vol. iv.), is perhaps still the most valuable.

Italy is to-day the home of criminal anthropology, and not of criminal anthropology only, but of all the sciences that are connected with crime and the criminal; the Zanardelli criminal code, which has recently become law, while by no means entirely satisfactory from the scientific point of view, shows the influence of the new movement. In this respect Italy remains true to traditions that are two thousand years old; in the sixteenth century Italy was still the centre of studies in penal law, and, to keep to modern times, it is enough to mention the great names of Beccaria, and, still more recently, Romagnosi. It was under the auspices of Beltrani-Scalia, well known in connection with prison reform, that the earlier Italian studies in criminal anthropology were published, from 1870 onwards, in the *Rivista delle discipline carcerarie*, a journal which continues to publish valuable monographs. In this journal Lombroso published, in 1872, the results of some investigations which he had made on prisoners at Padua.

Professor Cesare Lombroso, of Turin, occupies a position of such importance in the development of criminal anthropology that it is necessary to have a clear idea of his aims and methods and the nature of his achievement. Born in 1836, of Venetian parentage, the various and restless activities of Lombroso's career are characteristic of the man who has been all his life opening up new paths of investigation and enlarging the horizon of human

knowledge. At the age of eleven he composed romances, poems, and tragedies in the manner of Alfieri; at twelve he developed a passion for classical antiquity, and published two small works on Roman archæology. At thirteen he was attracted to the study of sociology from a linguistic point of view (chiefly, we are told, with relation to Greek, Hebrew, Chinese, and Coptic); at the same time he was drawn to natural science, being interested especially in the formation of crystals, and before entering the University he had published two books of a somewhat evolutionary character. While a student he was led, by the combined study of ancient religions and of medicine, to the subject of mental diseases. He began with studies on cretinism in Lombardy and Liguria, his conclusions being afterwards adopted by Virchow and others. In the eventful year of 1859 he became first a soldier, and afterwards a military surgeon. In 1862 he was in charge of the department of mental diseases at Pavia University, and he initiated there an institution for the insane, a psychiatric museum, and a series of researches in the application of exact methods to the study of insanity. This last attempt was at the time received with general derision; it was said that he was studying madness with a yard measure; but his methods gradually made progress, and slowly met with general adoption. After this he made some important investigations into the causes of pellagra. Called to direct the asylum at Pesaro, he reformed it, and established a journal, written and managed by the insane. He then returned to Pavia, where he continued his psychiatric work, investigated the influence of atmospheric conditions on the mind,

invented an instrument to measure pain, and engaged in a great number of studies, marked by extraordinary ingenuity, patience, and insight. Even as a youth Lombroso possessed the art of divining fruitful ideas, which at the time appeared absurd to scientific men as well as to the public. Every line of investigation he took up was at the time apparently opposed to the tendency of thought, and only received general attention at a later date. This was true, to some extent, even of the great achievement of his life.

In the year 1859—perhaps the most memorable of the century—Broca, who had a decided influence on Lombroso, had inaugurated the naturalist method of treating man with the Anthropological Society of Paris. The illuminating genius of Virchow, and his prodigious energy, which has done so much for anthropology and the methods of anthropology, also had its influence on the Italian, in some respects a kindred spirit. And Darwin's *Origin of Species*, published in 1859, supplied, for the first time, an indispensable biological basis, and furnished that atavistic key of which Lombroso was tempted to make at first so much use, sometimes, it must be added, so much abuse. These circumstances combined to render possible, for the first time, the complete scientific treatment of the criminal man as a human variety, while Lombroso's own manifold studies and various faculties had given him the best preparation for approaching this great task. It was in 1859 that he first conceived this task; *L'Uomo Delinquente* was not, however, finally published until 1876, while the second volume only appeared in 1889.

The influence of *L'Uomo Delinquente* in Italy, France, and Germany seems to have been as immediate and

as decisive as that of *The Origin of Species*. Despine's *Psychologie Naturelle*, the greatest work on the criminal that had appeared before Lombroso, was partial; the criminal was therein regarded purely as a psychological anomaly. Lombroso first perceived the criminal as, anatomically and physiologically, an organic anomaly. He set about weighing him and measuring him, according to the methods of anthropology. Even on the psychological side he gained new and more exact results. He went back to the origins of crime among plants and animals, among savages and children. He endeavoured to ascertain the place of the criminal in nature, his causes, and his treatment. Lombroso's work is by no means free from faults. His style is abrupt; he is too impetuous, arriving too rapidly at conclusions, lacking in critical faculty and in balance. Thus he was led at the beginning to over-estimate the atavistic element in the criminal, and at a later date he has pressed too strongly the epileptic affinities of crime. His weaknesses have never been spared rough handling from friendly or unfriendly hands. Thus Mantegazza, while recognising his *ingegno potentemente apostolico e geniale*, denies that Lombroso possesses any of the qualities of a scientific investigator, and Dr. Napoleone Colajanni, who, from the socialistic left of the movement, has, in his *Sociologia Criminale* (1889-90) and elsewhere, bestowed much elaborate and often valuable criticism on the centre, compares Lombroso's indiscriminate collection of facts to Charles IX.'s famous order on St. Bartholomew's eve: "Kill them all; God will know His own." But his work has been so rich, so laborious, so various; it has opened up so many new lines of investigation,

and has suggested so many more, that it has everywhere been received as marking a new epoch. He was, as he has himself expressed it, the pollen-conveying insect, and the new science which he fecundated has grown with extraordinary rapidity. A continuous stream of studies—from books of the most comprehensive character down to investigations into minute points of criminal anatomy or physiology—is constantly pouring forth. It is still impossible to gather up this mass of investigation, often necessarily discordant, into more than a tentative whole, but its existence is sufficient to prove the vitality of the new science. It has of course met with fierce antagonism, and Lombroso himself has declared that perhaps not one stone will remain upon another, but that if this is to be the fate of his work, a better edifice will arise in its place.

Two other Italians must be mentioned with Lombroso. Enrico Ferri, Professor of Penal Law at Rome and a Deputy in the Italian Parliament, while doing valuable work as a criminal anthropologist, has at the same time studied the social bearings of criminality in his best-known book, *Nuovi Orizzonti del Diritto*. He has occupied himself less with the instinctive than with the occasional criminal, and his clear and philosophic spirit has placed him at the head of criminal sociologists. Garofalo, a Neapolitan lawyer, accepting generally the conclusions reached by Lombroso and Ferri, has become the most distinguished jurist of the movement, the pioneer in that reform of law through the methods of natural science which must eventually become so fruitful. His *Criminologie* (the new and enlarged edition is written in French) is marked by luminous yet careful general-

isation, and it contains many suggestions of wise reform. Garofalo has brought into clear relief the inadequacy of legal maxims founded on antiquated and unscientific conceptions, and he has shown that not the nature of the crime, but the dangerousness (*temibilità*) of the criminal constitutes the only reasonable legal criterion to guide the inevitable social reaction against the criminal. This position is now generally accepted as the legitimate outcome of the scientific study of the criminal.

Among Italian workers in the department of criminal anthropology proper, a very high place belongs to Dr. Antonio Marro, formerly surgeon to the prison at Turin. *I Caratteri dei Delinquenti* (1887) contains the results of a carefully-detailed and methodic examination of more than five hundred prisoners, men and women, and of over one hundred normal persons together with an investigation into their ancestry and habits. All the data are presented in tabular form, and his excellent methods and judicious moderation in drawing conclusions impart great value to his work. His exactness and impartiality have been admired even by those whose instincts and training have led them to dread the invasions of this department of science. Dr. Marro has made interesting contributions to the differentiation of various criminal types, and he has brought out very clearly the disastrous tendency to degeneration among the children of parents who have passed middle age. Other Italian studies, among many that might be mentioned, are Virgilio's, dating from 1874, Dr. P. Penta's elaborate studies, the various works of Zuccarelli, the energetic Neapolitan professor and editor of *L'Anomalo*, V. Rossi's work, *Studio sopra*

una Centuria di Criminali, Salsotto's on women delinquents, and Ottolenghi's investigations into the senses of criminals. The *Archivio di Psichiatria*, a rich storehouse of elaborate observations, founded in 1880, directed by Lombroso, Ferri, Garofalo, and Morselli, edited by Rossi and Ottolenghi, remains at the head of journals of criminal anthropology.

The first suggestion of an international congress of criminal anthropology arose in Italy, and dates from the year 1882, when Salvatore Tommasi published an important article in the *Rassegna Critica*. The first congress, that of Rome, was not, however, actually held until 1885. It was attended by all the most distinguished criminal anthropologists, criminal sociologists, and jurists of the "positive" school, chiefly Italian, French, and German, and its *Actes* are of great interest. The second international congress was held in August 1889, in Paris. It was of a more cosmopolitan character than the first, and of even greater interest.¹

France has always been a laboratory for the popularisation of great ideas, and Tarde's *La Criminalité Comparée* is among the best of such attempts. M. Tarde is a *juge d'instruction*, not an alienist or an anthropologist; he touches on all the various problems of crime with ever-ready intelligence and acuteness, and a rare charm of literary style, illuminating with suggestive criticism everything that he touches. This easily accessible little volume of the Librairie de Philosophie Contemporaine is the most comprehensive introduction for those who would go down to the *città dolente* by a rose-strewn path. Lacassagne, the eminent medico-legal expert of Lyons, and editor of the

¹ For a brief summary of its proceedings, see Appendix B.

valuable *Archives de l'Anthropologie Criminelle*, stands perhaps at the head of French criminal anthropologists, although beyond his monograph, *Les Tatouages*, he has published little. The judicial qualities of his mind, and his power of expressing just and large conceptions in felicitous and memorable phrases, impart value to all that he writes, and his forthcoming work on the criminal man will, it is probable, for all practical purposes, supersede other works. *De la Criminalité chez les Arabes*, by A. Kocher, a pupil of Lacassagne's, is a book of great interest, and the names of Manouvrier, Bournet, Corre, Laurent, etc., are well known in connection with criminal anthropology in France, while Féréably represents the French school which explains criminality by degeneration alone.

In Germany the serious study of the criminal may be said to have begun with Krafft-Ebing, the distinguished professor of psychiatry, now at Vienna, who, by laying down clearly in his *Grundzuge der Kriminal Psychologie* (1872), and other works, the doctrine of a criminal psychosis, and pointing out its practical results, deserves, as Krauss remarks, to be regarded as an important precursor of Lombroso. Knecht studied over 1200 prisoners anthropologically. Dr. A. Krauss, who began with investigations into criminal psychology, has since done much solid work in criminal anthropology. Flesch made important observations on the morbid pathology of criminals; Benedikt, known in connection with various interesting investigations in criminal anthropology, began in 1879 with a remarkable study of the criminal brain, in which he observed frequent confluence of the fissures, as among some lower races, and also an

additional convolution in the frontal lobe, which he assimilated to that of the carnivora. His conclusions in this difficult field of research were, however, considerably shaken by Professor Giacomini, of Turin, and others, who showed that similar anomalies are found, although not so frequently, in normal persons. The brilliant Viennese professor has in his recently-published *Kraniometrie und Kephalmetrie* shown himself the most original and suggestive of living students of the architecture of the skull.

In Holland, Professor Van Hamel, of Amsterdam, represents the new spirit of approaching the problems of criminality.

In Belgium, where Quetelet's great work, *Physique Sociale*, inaugurated criminal sociology, and where prison reform, which has always attracted much attention, is now ably represented by Professor Adolphe Prins, the results of criminal anthropology have been received and discussed with interest and sympathy, and various researches have been carried on. Professor Héger and Dr. Semal of Mons should also be named here. In 1884 the Anthropological Society of Belgium nominated a commission for the investigation of criminal anthropology. This led to various interesting researches, none of them, however, of great importance.

In Spain and Portugal criminal anthropology is being prosecuted with much zeal. Among its chief representatives may be named especially Vera and Rafael Salillas (whose interesting book, *La Vida Penal en España*, gives a very vivid picture of life in the Spanish prisons), and at Lisbon Bernardo Lucas. D'Azevedo Castello Branco, sub-director of Lisbon prison, should also be mentioned. In 1889,

at a congress held in Lisbon, the relation of criminal anthropology to penalty, legal reform, and allied problems was fully discussed.

In the rapidly-developing Spanish countries of South America, especially in the Argentine Republic, criminal anthropology seems to be making great progress. It is officially taught at the University of Buenos Ayres. Luis del Drago, a judge in the Argentine Republic, with his *Los hombres de Presa* (1888), an able study of criminality, which has rapidly reached a second edition, thus showing the interest generally felt in these studies, and some other workers, witness to the progress made in this country. On the initiative of Dr. del Drago, with influential coadjutors, a society for the promotion of criminal anthropology was founded in Buenos Ayres in 1888, "to study the person of the criminal, to establish the degree of his dangerousness and of his responsibility, and to effect the gradual and progressive reform of penal law in accordance with the principles of the new school." In Brazil Professor Viejra de Aranjeo of Pernambuco is the chief representative of the science.

In Russia and Poland, although the study of criminal anthropology dates from very recent years, it is making considerable progress. Bielakoff, in the *Archives of Psychiatry* of Kharkoff, studied 100 homicides. Professor Troizki, of Warsaw, published a careful study of 350 prisoners. Dr. Prascovia Tarnowskaia examined 100 female thieves, whom she compared with 150 prostitutes and 100 peasant women. On the legal side, Dimitri Drill is engaged on a great work, of which one volume only is published at present, in which he deals thoroughly with

the organic factors of crime, and with the social applications of criminal anthropology. The Russians seem to be characteristically audacious in their applications of the new science, and there is in Russia a feeling, not merely against imprisoning criminals, but even against secluding them. In 1885 a young girl assassinated a Jewish child to obtain possession for her lover of the money of the child's father, a rich usurer. Professor Babinski declared that she was not mad, but entirely devoid of moral notions, that she was incurable, and that it would be quite useless (useless, that is, from a medical point of view) to put her in an asylum. She was acquitted.

In Great Britain alone during the last fifteen years there is no scientific work in criminal anthropology to be recorded. When Dr. Coutagne inaugurated, in 1888, a "Chronique Anglaise" in the *Archives de l'Anthropologie Criminelle*, he could not conceal his embarrassment. While the Italian, Spanish, Portuguese, and Russian summaries are founded on a large series of works in criminal anthropology, in England there is absolutely no centre for the scientific study of criminality. "Legal medicine," he remarks, "has there inspired no special publication, nor any learned society. At the International Medical Congress of London, in 1881, although so remarkably organised, it was less well treated than laryngology or dentistry, and formed the object of no section, state medicine being almost synonymous with hygiene. If we consult the scientific journals of England dealing with allied subjects, our baggage will receive very few additions." In 1889 the International Association of Criminal Law was founded

by Professor G. A. Van Hamel of Amsterdam, Professor Fr. von Liszt of Marburg, and Professor Adolphe Prins of Brussels. This association, which has a great future before it, represents, from the scientific and practical standpoint, the movement of reform in matters that relate to the criminal. It maintains that criminality and the repression of crime must be regarded as much from the social as from the legal point of view. It endeavours to establish this principle and its consequences in the science of criminal law as well as in penal legislation. The association already numbers between three and four hundred members, and includes well-known representatives from twenty-one different countries in Europe and America. England is among the least well represented of all; the English members rank in number with the Portuguese, Servian, and Argentine members. Germany is more than twenty times better represented.¹ No interest was felt in England in the International Congress of Criminal Anthropology recently held in Paris. At this Congress official delegates came from all parts of the civilised world, from Russia to Hawaii, but although there were two from the United States, there was not one from Great Britain. When some twelve months since I issued a series of Questions, dealing with some of the main points in the investigation of the criminal, to the medical officers of the larger prisons in Great Britain and Ireland, the answers that I received, while sometimes of much interest—and I am indebted to my correspondents for their anxiety to answer to the best of their ability—were amply sufficient to show that criminal

¹ See Appendix C.

anthropology as an exact science is yet unknown in England. Some of my correspondents, I fear, had not so much as heard whether there be a criminal anthropology.¹ England has, however, in the past been a home of studies connected with the condition of the criminal. The centenary of John Howard, which we have lately celebrated, is a brilliant witness to this fact. Fifty years ago Englishmen sought to distinguish themselves by the invention of patent improved tread-mills and similar now antiquated devices to benefit the criminal. We began zealously with the therapeutics of crime; it is now time to study the criminal's symptomatology, his diagnosis, his pathology, and it is scarcely possible to imagine that in these studies England will long continue to lag so far behind the rest of the civilised world.

¹ It is worthy of note, as Lombroso remarks, that the first investigator of the criminal in England on modern scientific lines should be a clergyman—the Rev. W. D. Morrison. See his “Reflections on the Theory of Criminality” in the *Journal of Mental Science*, April 1889.

CHAPTER III.

CRIMINAL ANTHROPOLOGY (PHYSICAL).

§ I. *Cranial and Cerebral Characteristics.*

CONSIDERABLY greater importance was formerly attributed to the shape and measurements of the head than we can now accord to them, although the subject still retains much interest. A vast quantity of data has accumulated concerning the heads of criminals; some of the results are contradictory, but certain definite conclusions clearly emerge.

The *average* size of criminals' heads is probably about the same as that of ordinary people's heads; but both small and large heads are found in greater proportion, the medium-sized heads being deficient. The same is true, as Tigges and others have shown, of the insane, though among these the larger preponderate to a greater extent. Thieves more frequently have small heads; the large heads are usually found among murderers.

Nothing very definite can be said of the cephalic indices save that they are frequently an exaggeration of those of the race to which the criminal belongs; those of long-headed race being sometimes very long, and those of broad-headed race sometimes very broad; the Corsican criminal being often very dolichocephalic, and the Breton criminal often very brachycephalic.

There is a generally recognised tendency to the pointed (oxycephalic) or sugar-loaf form of head. Though this form is probably, as Benedikt points out, an effort at compensation, it is an effort that testifies to defective organisation. The opposite defect of low or flat-roofed skull is also found among criminals, and is characteristic of degeneration. Lauvergne, in his old book on criminals, has a vivid and picturesque sketch of a variety of this kind of head, which he called the satanic type, and which he found among many of the worst criminals: "Such are the heads which painters throw into their pictures, and call 'heads of the other world.' I have recognised them in mediæval pictures, and in all the museums in which the products of early art are preserved. You will see them on old cathedrals, in which devils play a part, or wherever the artist has received some diabolical inspiration, as in the Campo Santo at Pisa. One cannot, indeed, better represent the genius of evil, Satan, the fallen angel, than by giving him such a head. . . . Behind the frontal bones the head seems to have been tied with a band to compress it around and to force the swelling of the hemispheres upwards and backwards. It is the head vulgarly called sugar-loaf. When it is complete, that is to say, when it presents a prominent base supporting an inclined pyramid, more or less truncated, this head announces the monstrous alliance of the most eminent faculty of man, genius, with the most pronounced impulses to rape, murder, and theft." Benedikt regards the bilateral elevation of the sagittal suture as, though rare, "significant of profound perversity of brain function." He also regards disproportionate development of the occipital part of the skull as a characteristic mark of

degeneration.¹ It appears that the posterior half of the skull varies much more in different individuals than the anterior half.

The orbital capacity has been noted by Lombroso and others to be frequently larger than normal (as among birds of prey and some savages), especially among thieves. There is marked exaggeration of the orbital arches and frontal sinuses which may be related, at all events in the cases of individuals living in the country, with energy of the respiratory system.

Receding foreheads, very commonly observed among criminals, have always been regarded as evidence of low mental and moral organisation, not without reason, though it must be remembered, as Ten-Kate and Benedikt point out, that the breadth, vaulting, and general size of the head must be taken into consideration. Many men of marked intellectual power have had receding foreheads.

Tenchini has pointed out (and the observation has since been confirmed) that the frontal crest is often stronger and more prominent in criminals. In normal skulls he found it 3-4 millimetres in length; in criminals frequently 5-6 mm. It is also larger in the insane and lower races, and relatively larger in orang-outangs. It may signify precocious union of the two parts of the frontal bone with consequent arrest of brain development.

The presence of a median occipital fossa has been specially noted by Lombroso, sometimes in connection with hypertrophy of the vermis of the cerebellum, as among the lower apes, in the human foetus between the third and fourth months, and in some lower races.

¹ This, and most of the other opinions of Professor Benedikt quoted in this section, are from *Kraniometrie und Kephalometrie*, Vienna, 1889.

Lack of cranial symmetry is one of the most marked features of the criminal skull, although it has not often at present been subjected to exact measurement.¹ It must be remembered that every skull, criminal or non-criminal, is deficient in strict symmetry (and, indeed, every part of the body likewise), and that statistics therefore are here of little value; it is simply a question of the amount of asymmetry; and two observers going over the same series of skulls would almost certainly come to different conclusions. They would probably, however, both find the proportion of asymmetrical heads greater in the criminal than in the ordinary series.

All these cranial abnormalities are found occasionally in ordinary persons; very rarely are they found combined in normal persons to the extent that they are found among instinctive criminals. Thus Lombroso, when he examined the skull of Gasparone, a famous brigand of the beginning of the century, whose name still lives in legends and poems, found microcephaly of the frontal region, a wormian bone, eurigmatism, increase in the orbital capacity, oxycephaly, and extreme dolichocephaly. Mingazzini found that out of thirty criminals eight presented brains and skulls of a weight and capacity only found in submicrocephalic subjects; that several of these showed, either in brain or skull, or both, the union of several anomalies; and that in the skulls of other six the abnormal appearances were so manifold as to

¹ The evolutionary tendency of the skull among the higher vertebrates seems to be from the asymmetrical to the symmetrical, while the tendency of the brain is from the symmetrical to the asymmetrical. See M. O. Fraenkel: "Etwas über Schädel-Asymmetrie und Stirnnaht," *Neurologisches Centralblatt*, August 1, 1888.

present an aspect which might be called "completely teratologic."¹ Most of these anomalies are found much more frequently in the male than in the female skull. If, however, the criminal woman is compared with the normal woman, she is found to approach more closely to the normal man than the latter does; while the corresponding character (feminility) is not found so often in the criminal as in the normal man, except among pæderasts and some thieves. It may also be mentioned that nearly all these anomalies are much more rarely found in the insane.

In Plates I.-VI. will be found a series of convicts' heads—concerning which information may be found in Appendix A—illustrating in a very remarkable manner many of the peculiarities noted in this and subsequent sections. They are reproduced from sketches made by Dr. Vans Clarke, formerly governor of Woking Prison. The thirty-six here reproduced I have selected from 111 of a similar character in Dr. Clarke's note-books. They are, as Dr. Clarke remarks, exceptional rather than typical heads; but as he discontinued making the sketches after he had seen about a thousand men, the specimens given are evidently by no means very exceptional. They represent at the least 10 per cent. of the criminals examined. "My sketches," he writes, "were taken at the 'model prison' of Pentonville, where the duty of filling up the medical history-sheet of every convict on his arrival devolved upon me, and I was prompted to use my sketch-book during the physical examination, on the observation of remarkable peculiarities in many of the heads and faces of the criminals. The portraits were necessarily taken in haste, but they were

¹ *Archivio di Psichiatria*. 1888. Fasc. VI.

true, and were considered to be successful as likenesses. I may say that I was compelled to make a selection rather from want of time than the lack of material. In a less marked degree the instances of misshapen heads and repulsive facial characters were very common." Some of the cranial and facial characteristics noted by criminal anthropologists are brought out in these sketches in so well-marked a form that it may be as well to say that they were taken some years ago, before the publication of Lombroso's work, and it was therefore impossible for Dr. Clarke to have been unconsciously influenced by any preconceived notions on the subject.

As far back as 1836 Lélut weighed ten brains of criminals, and his results show, according to Topinard, a result below that of the normal. Bischoff, in 1880, published the results of an important series of observations he had made on the weight of the brain in criminals. He weighed the brains of 137 criminals and 422 normal persons. He found that small-sized and medium-sized brains were about equally common in criminals and in normal subjects; while among the heavier brains, weighing from 1400 to 1500 grammes, the criminals were in the proportion of 24 per cent., the normal persons of 20 per cent. Topinard, putting together the results of several series of observations on the weight of the brain in criminals, and comparing them with those of Broca for ordinary individuals of the same age, finds that in criminals there is an inferiority of some 30 grammes. There is some reason to suppose that the weight of the cerebellum in criminals is often decidedly superior to the normal savage. It is clear, on the whole, that little importance attaches to the weight of

PLATE I.

PLATE II.

PLATE III.

PLATE IV.

PLATE V.

PLATE VI.

the brain in criminals, a conclusion which harmonises with such a fact as that Gambetta's brain resembled in weight that of a microcephalic idiot.

There is more evidence in favour of attaching some importance to the shape of the brain, to its relative development, to the condition and relations of its convolutions. Broca, Topinard, and many other eminent anthropologists and anatomists have attributed great value to these relations. Gall was perhaps the first to suspect their significance. Benedikt, in 1879, published some interesting generalisations on the brains of criminals which he had examined. He found special frequency of confluent fissures; that is to say, according to his own description, if we imagine the fissures of the brain to be channels of water, a swimmer might with ease pass through all these channels. Benedikt also found in the brains of his criminals that the frontal lobe frequently presented four convolutions, a peculiarity which he considered as a reversion to the carnivorous type; the investigations of Hanot and Bouchard confirmed these results. But Benedikt neglected to make an adequate comparison with the normal brain, and Giacomini, Corre, Fallot, and Féré have shown that these peculiarities are not very rare in ordinary subjects. The question of confluent fissures had before this time attracted the attention of Broca, and his conclusions may probably still be accepted:—"One or more of these communications," he said, "do not prevent a brain from being at once very intelligent and very well balanced, but when they are numerous, and when they affect important parts, they indicate defective development. They are often seen in the small brains of the weak-minded and idiots, very

frequently also in the brains of murderers, with this difference, that in the first case they are related to the smallness of the convolutions and of the brain generally; while in the second case they coincide with convolutions for the most part ample in size, and bear witness to irregularity in cerebral development." Flesch studied the brains of fifty criminals, and found that every one presented some anomaly, sometimes of a remarkable character, as incomplete covering of cerebellum by cerebrum. He found two kinds of deviations common, one characterised by less richness of convolution than is found usually in ordinary brains, the other characterised by much greater richness of convolution than he had ever observed in normal brains. On the whole we may agree with Hervé, that "what the brains of criminals present, not characteristically but in common with those of other individuals badly endowed though by no means criminals, is a frequent totality of defective conditions from the point of view of their regular functions, and which renders them inferior."¹

Although a very considerable mass of evidence is now accumulating, we know considerably less of the brains of criminals than of their skulls. This is in large measure due to the fact that there is at present insufficient evidence regarding the condition of the normal and healthy brain, and unless controlled by careful series of observations on normal persons, observations on criminal brains cannot be interpreted.

¹ For an admirable statement of the present condition of the question see an article by Professor Fallot of Marseilles, "Le Cerveau des Criminels," in the *Archives de l'Anthropologie Criminelle*, 15th May 1889. Lombroso's treatment of this question is extremely brief, and not always accurate.

The important matter of the vascular supply of the brain in criminals has yet received little attention, but a variety of pathological features have been found in the cerebral substance and membranes—pigmentation, degenerating capillaries, cysts, thickened and adherent membranes, the vestiges of old hyperæmia and hæmorrhages. Some of these conditions are found with great frequency, much oftener than in the insane; meningitis, for instance, being found, according to Lombroso's experience, in 50 per cent. of the cases examined; while Flesch has obtained very similar results. The frequency of meningitis was noticed in some of the answers to my Questions, especially by one prison surgeon who wrote of "well-organised adhesions between the dura mater and vault of cranium, localised but more extensive than one would expect to find." Unfortunately, he was unable to supply exact figures as to the frequency of such signs. It must be added, as a point of considerable importance, that in very few cases have these pathological lesions produced any traceable symptoms during life.

§ 2. *The Face.*

Prognathism has frequently been noted as a prominent characteristic of the criminal face, both in men and women. This is, however, a point that requires further study; giving due weight to racial characteristics, to the proportion of prognathous individuals among the general population, and to method and uniformity in measurement.

There is little doubt that the lower jaw is often remarkably well developed in those guilty of crimes

of violence. The squareness and prominence of the jaw are obvious to the eye, and this is verified by weighing after death, as has been shown by Manouvrier. The average weight of the Parisian criminal skull is, if anything, below that of the ordinary Parisian, but while the average weight of the lower jaw in the latter is about 80 grammes, it is about 94 grammes among murderers. In this respect the criminal resembles the savage and the prehistoric man; among the insane the jaw weighs rather less than the normal average. A type of receding chin is also found frequently among petty criminals, the occasional or habitual, who are criminals by weakness; such heads Lauvergne called *têtes moutonnes*.

Prominence of the zigoma or cheek-bone has been noted by many observers, especially in sexual offenders, among whom Marro found it in 30 per cent. as against 22 per cent. in normal persons. This recalls a remark made many years ago by Charles Kingsley: "I have generally seen with strong animal passion a tendency to high cheek-bone;" but he confines this generalisation to women, and to those who are dark-complexioned. Virchow believes that the large development of the jaws and the cheek-bones (to which powerful muscles are attached) is favoured by coarse and hard food through many generations.

A few isolated observations have been made on the teeth of criminals by Lombroso, Zuccarelli, and others, who have observed certain anomalies, such as exaggerated or deficient development of the canines; and Dr. Prascovia Tarnowskaia, in her one hundred women thieves, found defects of the bony palate and undeveloped teeth among the most frequent anomalies.

So far as I know, however, no extensive and careful series of observations has yet been made on the teeth of criminals. It is desirable that this should be done. The course of dental evolution among the higher mammals is now fairly well known. Atavism in dental anomalies is well recognised among the races of man ; a fourth molar, for instance, found generally among the platyrrhine apes, is occasionally found in man : in what proportion is it found among criminals? What, again, is the relative condition of the canine teeth? The wisdom-teeth are dying out ; they are only absent among lower races in 19 per cent. cases, while in the higher races they are absent in 42 per cent. of the observed cases (Mantegazza). How do criminals stand in this respect? The development of the teeth is very closely related to the development of the nerves and brain. The extraordinary frequency of dental and palatal anomalies in idiots was pointed out in England in 1860 by Ballard and Langdon Down, and they have been carefully studied of recent years by Dr. Talbot, of Chicago, and by Dr. Alice Sollier at the Bicêtre in Paris. It is worth noting, in reference to the undeveloped teeth so frequently found by Dr. Tarnowskaia among women thieves, that Dr. Sollier found abnormally small teeth in 13 per cent. of her idiots. Among the insane dental anomalies are comparatively rare.

Even non-scientific observers have noted the frequency among criminals of projecting or of long

1. Darwinian tubercle and absence of helix. 2. Absence of lobule and antitragus. (Féré and Séglas.)

and voluminous ears. In the answers to my Questions issued to medical officers of prisons I found that the prominent ears of criminals were more generally recognised than any other abnormality. Thus Dr. V. Clarke says—"The largely developed external ear is a common feature;" others speak of "ears often large and outstanding," etc. Lombroso finds the ear *ad ansa*, as he calls it—the handle-shaped ear—in 28 per cent. of his criminals; Knecht in 22 per cent.; Marro not more frequently than among ordinary people. Ottolenghi, who has recently examined the ears of nearly 600 criminals and of 200 normal persons, finds that while among the latter it is found in 20 per cent., among the former it is found in 39 per cent., the percentage varying from 35 among thieves to 42 among those convicted of assault and wounding. This observation is indeed by no means of recent date. In reading lately that curious treatise of mediæval physiology, Michael Scott's *De Secretis Naturæ*, I found that a very bad character is given to those persons whose ears are uncommonly long, or ample transversely; they are bold, vain, foolish, incapable of work. To come down to comparatively recent times, Grohmann in 1820 noted the prominent ear as a marked characteristic of the criminal. Morel studied the abnormalities of the ear, especially in relation to heredity; Foville, as Dr. Barnes informs me, was accustomed to point out their significance in the insane; and in England Laycock fully appreciated their value as indications of degeneration.¹ Dr. Langdon Down, working on the same lines as Laycock, points out in *Mental Diseases of Childhood*

¹ "Lectures on Physiognomical Diagnosis of Disease." *Medical Times*, 1862.

the frequency of congenital ear deformities in idiots and the feeble-minded, associated often with webbed toes and fingers; also an implantation of the ears farther back than is normal, giving an exaggerated facial development. In France, Italy, and Germany there has within the last two or three years sprung up a considerable literature on the subject, of which Frigerio's little book, *L'Oreille Externe: Étude d'Anthropologie Criminelle* (Paris, 1888), is perhaps the most valuable. Dr. Frigerio, who has devoted special attention to this feature both among criminals and the insane, finds certain peculiarities very common, and also notes various anomalies of movement in the pinna and its partial hyperæmia, especially in neurotic subjects. From the examination of several

1. Darwinian tubercle. 2. Root of the helix dividing the concha into two distinct cavities. 3. Adherent lobule. (Féré and Séglas.)

hundred subjects, he concludes that the auriculo-temporal angle (measured by a special otometer from the edge of the pinna to the mastoid) undergoes a gradual progression from below 90° in the normal person, above 90° among criminals and the insane, up to above 100° among apes. He found the large angle very marked in homicides; less so in thieves. The longest ear Frigerio has ever seen in man or woman was in a woman convicted of complicity in the murder of her husband; the left ear was 78 mm., the right 81 mm. (the normal being 50-60 mm.) in length. Her father, her two sisters, and three cousins all possessed excessively large ears, and were all

convicts. The degenerative variations to which he attributes most importance are the Darwinian tubercle—*i.e.*, a pointed projection in the outer margin of the ear—frequent among the insane and criminals, the doubling of the posterior branch of the fork of the antihelix, and a conical tragus (very frequent in childhood and among apes) often found among the insane and criminals. Féré and Séglas,¹ who examined over 1200 subjects—healthy, insane, idiot, and epileptic—found anomalies frequent among epileptics, and especially so among idiots; but not notably more frequent among the insane than among the sane. They especially noted the number of abnormalities frequently found in the same subject; and also a connection between defects in the ear and sexual abnormalities. The committee appointed by the British Medical Association to investigate the development and condition of brain function among the children in primary schools, found that ear-defects were especially frequent in connection with nerve-defects and mental weakness.²

The most common (so-called) atavistic abnormalities of the ear—*i.e.*, those most frequently and prominently seen among the anthropoid and other apes—are the Darwinian tubercle,³ absence of one of the branches of the fork, absence of helix, effacement of antihelix, exaggerated development of root

¹ "Contributions à l'Étude de quelques Variétés Morphologiques de l'Oreille Humaine." *Revue d'Anthropologie*, 15th April, 1886.

² Dr. F. Warner, "Form of Ear as a Sign of Defective Development." *Lancet*, 15th Feb. 1890.

³ Schwalbe, who distinguishes five principal forms of the Darwinian tubercle, regards it as normal, and believes that with a little practice it might be discovered in nearly all ears. This may well be, but in its distinctly marked form it can scarcely be called normal.

of helix, absence of lobule. Adherent lobule may frequently be observed in well-developed individuals; it is not found among apes, and appears to have no special significance.

The projecting ear has usually been considered as an atavistic character, and with considerable reason, as it is found in many apes, in some of the lower races, and it corresponds to the usual disposition of the ear in the fœtus. Marro prefers to regard it as a morbid character because it is so frequently united with true degenerative abnormalities, and because it is not always found in the lowest human races; Hartmann, for instance, having found it frequently among the European peasants, and in Africa more frequently among Turks, Greeks, and Maltese than among the indigenous fellaheen, Berbers, and negroes of the Soudan. Among so low a race as the Australians the ear is often, I have noticed, very well shaped. At the same time the projecting ear frequently accompanies deaf-mutism, Dr. Albertotti having found it in sixteen out of thirty-three deaf-mutes.

The ear, it is well known, is very sensitive to vasomotor changes, slight changes serving to affect the circulation visibly; so that in pale, nervous people a trifling emotion will cause the ears to blush. Galton tells us of a schoolmistress who judges of the fatigue of her pupils by the condition of their ears. If the ears are white, flabby, and pendent, she concludes that the

1. Forking of the root of the helix. (Péré and Séglas.)

children are very fatigued; if they are relaxed but red, that they are suffering, not from overwork, but from a struggle with their nervous systems, rarely under control at the age of fourteen or fifteen. If this kind of sensitiveness is not common among criminals, a few of neurotic temperament, as well as some lunatics, possess the power, rare among normal persons, of moving the ear. Frigerio notes movements of the superior and posterior muscles, especially when touched; in apes the transverse muscle also acts. Frigerio connects this power of movement with perpetual fear, always on the look-out; many of the criminals with this peculiarity were recidivists, and three of the lunatics had delusions of persecution.

The interest of these investigations, now so actively carried on, into the malformations of the pinna among criminals is obvious. A few ingenious persons have sought to explain some of them by the influence of the headgear, pulling of the ears, etc.; but on the whole it is generally recognised that they are congenital. The study of them, therefore, is of distinct value in enabling us to fix the natural relationships of the criminal man. There is still need for careful series of observations on criminals, the insane, epileptics, and idiots, and every such series should be controlled by a similar series of observations, by the same observer, on ordinary subjects.

The criminal nose has been measured and studied with great care and enthusiasm by Ottolenghi.¹ He finds that the criminal nose in general is rectilinear,

¹ See his paper, "Lo Scheletro e la forma del naso nei criminali, nei pazzi, negli epilettici e nei cretini," in the *Archivio di Psichiatria* for 1888. Fase. I.—Professor Héger, in a communication to the Société d'Anthropologie of Brussels, remarks that he is able to con-

more rarely undulating, with horizontal base, of medium length, rather large and frequently deviating to one side, and he describes several varieties. Thus the typical thief's nose is rectilinear, often incurved, short, large, and often twisted, with lifted base. The sexual offender presents the most rectilinear nose, though he shows the undulating profile of nose more frequently than any other group of criminals, of medium length and rather large. Ottolenghi believes that his observations help to show, both in the skeleton and in life, an anatomical relationship between criminals against the person and epileptics and monomaniacs; also a relationship between thieves and sexual offenders and cretins. His observations are full and interesting, but the matter needs further investigation; the anthropological importance of the nose has scarcely yet been fully realised.

Most writers on criminals speak of the pallor of the skin; this has been noted at a very remote period by Polemon, l'Ingegneri, and other early physiognomists. Marro has found it in 14 per cent. of his criminals, as against 3 per cent. among the ordinary population. He considers that it is related to habitual cerebral congestion. Pallor is also caused (as Colajanni points out, and testifies to from personal experience) by prolonged imprisonment, even under favourable circumstances. It is probable that the influence of this cause has not yet been eliminated with sufficient care.

Ottolenghi has investigated the wrinkles on the faces of 200 criminals as compared with 200

firm many of Dr. Ottolenghi's conclusions with reference to the nasal aperture in the cranium, by examination of the skulls of Belgian murderers.

normal persons. He finds that they are much more frequent and much more marked in the criminal than in the non-criminal person, and this must have struck many persons who have seen a large number of criminals or photographs of criminals. The relative frequency is especially marked in zygomatic and genio-mental wrinkles, while the foreheads, even of youthful criminals, and when the face is in a state of repose, sometimes present a curiously marked and scored appearance. The precocity of these wrinkles is worthy of note. "We found young criminals of fourteen," Ottolenghi remarks, "with wrinkles more evident and marked than are met with in many normal men above thirty. It is these precocious wrinkles which give to young criminals that aspect of premature virility which Lombroso and Marro have already noticed." "It is worthy of note," he remarks also, "that the part of the face which, by the prevalence of wrinkles, shows more active expression in criminals as in other degenerated persons, is that corresponding to the region of the nose and mouth—that is to say, the less contemplative, more material, part of the face; and, in fact, we see that, with the exception of some murderers, who have a surly look and corrugated forehead, the typical delinquent presents habitually in the more rational and contemplative part of his face the least degree of active expression, this corresponding to his limited psychical sensibility."

§ 3. *Anomalies of the Hair.*

The beard in criminals is usually scanty. As against 1.5 per cent. cases of absence of beard in

normal persons, Marro found 13.9 per cent. in criminals, and a very large proportion having scanty beard. The largest proportion of full beards among criminals was found by Marro in sexual offenders.

On the head the hair is usually, on the contrary, abundant. Marro has observed a notable proportion of woolly-haired persons, a character very rarely found in normal individuals. The same character has been noted among idiots. In contrast with what is found among the insane, baldness is very rare. Among criminal women remarkable abundance of hair is frequently noted, and it has sometimes formed their most characteristic physical feature, accompanied by an unusual development of fine hair on the face and body. Salsotto, who has given special attention to criminal women, finds a considerable distribution of hair between the pubes and the umbilicus (as in men) in 10 per cent. of the forty women he examined as to this character; such distribution among normal women only occurring (according to Schulze) in 5 per cent. cases. Salsotto also found abundant hair in seven out of the forty around the anus, a part in normal women rarely supplied with hair. The excess of down on the face is found with special frequency in women guilty of infanticide. It is worth while pointing out that (as Dr. Langdon Down notes) there are frequent anomalies in the development of hair among idiots. Some are hirsute over the entire body; 11 per cent. have continuous eye-brows.

This abundance of hair seems to be correlated with the animal vigour which is often so noticeable among criminals. It may at the same time be to some extent explained by arrest of development or

atavism leading to the deficiency of beard which in its fully developed form marks, with few exceptions, only the highest human races. Strong sexual instincts are but the effervescence of this animal vigour ; hence, perhaps, the connection between the presence of an unusual amount of hair and infanticide. In the case selected by Bucknill and Tuke as a typical example of insanity in women due to repressed sexual instinct, the chief physical characteristic noted was the amount of hair on the body ; and in a case recorded by Dr. H. Sutherland (*West Riding Asylum Reports*, vol. vi.) of a girl whose illness and subsequent death were in his opinion due to "unsatisfied sexual desire," the long fair hair, which she delighted in letting flow down to her knees, was specially noted. It was observed of the French writer, Restif de la Bretonne, of whose extraordinary and abnormal sexual proclivities, even at an early age, he has himself left ample evidence in his autobiographical book, *Monsieur Nicolas*, that his body was remarkably hairy.

In regard to colours, the proportion of dark-haired persons is considered greater among criminals than among the ordinary population in England, Italy, and Germany. An exception to this general rule in the case of sexual offenders (rape and pæderasty) appears to be well marked in Italy ; though, so far as I have been able to ascertain, it has not been frequently observed in England. Marro associates the fair hair of sexual offenders with the precocious puberty of fair-haired women, as shown by the investigations of Professor Pagliani. The researches of Marro and Ottolenghi over a very considerable field give the following results for North Italy :—

	Chestnut Hair.	Fair.	Black.
Normal persons (900)	90.78 per cent.	9.22 per cent.	
Criminals (1620)	93.83 „	6.17 „	
Sexual offenders (100)	81.85 „	16.67 „	1.48 per cent.

Ottolenghi notes that the prevailing fair colour is reddish.¹

Grey hair was found by Ottolenghi to be vastly more frequent at an early age among ordinary working men and peasants than among the 200 male criminals he examined: thus, between the ages of 30 to 33 it was 60 per cent. for the former, only 12 per cent. for the latter. This does not hold true for criminal women, who become grey more quickly than ordinary women. The male criminal in this respect resembles the epileptic, and especially the cretin, in whom grey hair is seldom seen. Baldness, Ottolenghi shows, is very rare, comparatively, in the criminal, in relation not only to the normal man but even to the epileptic and the cretin. In this respect the criminal differs greatly from the ordinary professional man, in whom baldness is frequently found.²

To the existing statistics of the colour of hair among criminals, taken as a whole, it is not possible at present to attach much value. There is no uniform

¹ Almost as well marked as this tendency to fair hair among Italian sexual offenders—which possibly may be a question of race—is the predominance of blue eyes. Ottolenghi, who considers it as one of the most constant characters of the class, gives the following figures:—

	Blue.	Brown.	Greenish.
Normal persons	29.04 per cent.	63.91 per cent.	7.05 per cent.
Criminals	35.80 „	59.50 „	4.70 „
Sexual offenders	49.60 „	45.76 „	4.64 „

Bichromatism (irregular colouring) of the iris is also found with unusual frequency in this class of offenders.

² Ottolenghi, “La canizie, la calvizie e le rughe nei criminali.” *Archivio di Psichiatria*, 1889, Fasc. I.

system of description and nomenclature ; it is difficult to make full allowance for ethnic divergence, and there rarely exists an adequate standard of comparison for the normal persons of corresponding race. Of 129 persons "wanted" at Scotland Yard, I find that 45 have "dark brown" hair, and of these 17 (*i.e.*, 37.7 per cent.) are described as "dangerous," "desperate," "expert," or "notorious"; 46 have "brown" hair, and of these 14 (*i.e.*, 30 per cent.) are "dangerous," etc. ; 11 are "dark" (9) or "black" (2), and of these 3 (*i.e.*, 27.2 per cent.) are "dangerous"; 27 are described as "light brown," "light," "sandy," "fair," "auburn" (one, a woman), "red" (one, a man, who is "dangerous"), and of these 9 (*i.e.*, 33.3 per cent.) are "dangerous," etc. This gives a proportion of red-haired persons about the same, according to my observations, as is found among middle-class men in the city, but considerably lower than is found, according to Dr. Beddoe, the chief authority on this subject (in his *Races of Britain*), among the lower classes in London—*i.e.*, about 4 per cent. This is the class from which the criminals in question were chiefly drawn, but they do not exclusively belong to London ; many come from the northern towns, and in many of these, Leeds, for instance,¹ according to my observations, the proportion of red-haired persons is decidedly larger than in London, and certainly not smaller.

It is interesting to compare these statistics of the hair of London criminals with a body of statistics

¹ The surgeon of Leeds prison, in his answers to my Questions, records his opinion that the red-haired are "relatively more prevalent" among prisoners than among the ordinary population. This opinion stands alone, nor is it supported by any figures.

concerning the colour of the hair of 1220 insane persons (omitting the grey-haired) in the New Brunswick Asylum; although as the racial mixture is certainly not quite identical, and the nomenclature probably varies, no strict comparison is possible. Of these 1220 insane persons the hair of 1050 is described as "dark," "dark brown," "brown," while 170 have "light," "auburn," or "red" hair. One person in seven among the insane persons has fair hair, one in five among criminals; one person in fifty among the insane has red hair, one in 129 among the criminals; one in forty among the insane has auburn hair, one in 129 among the criminals. So that while the proportion of fair-haired is distinctly smaller among the insane, the proportion of red-haired and auburn-haired is very decidedly larger than among the criminals.

So far as exact evidence on the colour of the hair goes, it points chiefly to a relative deficiency of red-haired persons among criminals. This may perhaps be accounted for. There seems to be a lessened power of resistance to disease among persons of brilliant pigmentation. The extensive anthropological statistics of the American War showed a very marked inferiority on the part of fair persons. These statistics have been criticised by De Candolle, who believes, however, that even with deductions they may probably still be accepted. Our evidence as to the proportion of bright-haired people in lunatic asylums seems to point in this direction. These red-haired people, with their "sanguine" temperament of body, are peculiarly susceptible to zymotic disease; they take scarlet fever, for instance, very easily, and suffer from it severely. Among the manifold risks of a

criminal life the brightly pigmented person, with his sensitive vascular system, seems to be soon eliminated.

§ 4. *Criminal Physiognomy.*

The science of physiognomy is still in a vague and rudimentary condition, although the art has long been practised with more or less success. There are, for instance, a large number of proverbs in which some of the most recent results reached by the criminal anthropologists of to-day were long ages back crystalised by the popular intelligence. Such are the Roman saying, "Little beard and little colour; there is nothing worse under heaven;" the French, "God preserve me from the beardless man;" the Tuscan, "Salute from afar the beardless man and the bearded woman;" the Venetian, "Trust not the woman with a man's voice."

Many of the old physiognomists, especially the two greatest, Dalla Porta and Lavater, tell us how they immediately recognised criminals, although they sometimes ludicrously failed; and Lavater once mistook the portrait of an executed assassin for Herder's. A criminal anthropologist of to-day, Professor Enrico Ferri, declares that out of several hundred soldiers whom he examined, he found one, and one only, whom his face declared to be a murderer; he was told that this man had, in fact, been found guilty of murder. Garofalo, the Neapolitan jurist, observes that he is scarcely deceived twice out of ten times. Nor is this acuteness of perception by any means confined to skilled observers. It is very commonly found among women. Many persons, on first meeting an individual, are conscious of an unfavourable

impression which they succeed in out-living, but which is subsequently justified. Sometimes the revealing glance is found, perhaps with a shock of horror, in a face already familiar. It is a mistake to attempt to stifle such instinctive impressions as irrational. They are part of the organised experiences of the race, and, subject to intellectual control, they are legitimate guides to conduct.

Professor Lombroso tells us that his mother, who had always lived far from the world, was twice able to discover the criminal character of young people whom as yet no one had suspected. A more curious example, he goes on to remark, occurred in connection with the murderer Francesconi. There was nothing remarkable about him, nothing to indicate ferocity or a temper unlike that of other people; his beard was abundant and forehead high; one just perceived a slight degree of prognathism and some prominence of the frontal eminences. Yet years before his crime, a young girl of sixteen (afterwards the Countess della Rocca), who had never quitted the paternal home, and had no experience of life, refused to speak to him when every one welcomed him on account of his wit. When asked why she treated him as though he were a scoundrel, she replied: "If he is not a murderer he will become one." When Lombroso afterwards asked her by what sign she was guided to this too speedily verified prophecy, she replied: "By his eyes." Lombroso once asked an intelligent schoolmistress to submit to thirty-two young girls twenty portraits of thieves and twenty of great men. Eighty per cent. of these children recognised the first as bad people, the second as good. On another occasion he showed two hundred

photographs of youths to three medical men, and they all selected one as of the criminal type; a little girl of twelve also selected the same. This youth had never appeared in a court of justice, but he had cruelly betrayed those who had assisted him to obtain a good position in life. He was not legally a criminal, but, as Lombroso remarks, he was so anthropologically.

Beautiful faces, it is well known, are rarely found among criminals. The prejudice against the ugly and also against the deformed is not without sound foundation. What Hepworth Dixon wrote in 1850 on this point is still of general application in all civilised countries:—"The population of Millbank is always numerous and always changing; but its character remains substantially the same. Year after year the visitor might drop in and see no difference. There is a certain monotony and family likeness in the criminal countenance which is at once repulsive and interesting. No person can be long in the habit of seeing masses of criminals together without being struck with the sameness of their appearance. A handsome face is a thing rarely seen in a prison; and never in a person who has been a law-breaker from childhood. Well-formed heads, round and massive, denoting intellectual power, may be seen occasionally, but a pleasing, well-formed face, never."

In looking through the large number of photographs in Lombroso's great work, *L'Uomo Delinquente*, very few pleasant faces can be found. The two or three attractive ones are those of women in whom the glow of youth, plumpness, and abundant hair serve as a disguise to features that will scarcely bear examination. The proportion of good-looking faces among the excellent photographs in Inspector Byrnes'

Professional Criminals of America, is much larger. As the able chief of the Detective Department of New York, who, however, distinctly recognises a criminal type of face, remarked to a visitor: "Look through the pictures in the Rogues' Gallery and see how many rascals you find there who resemble the best people in the country. Why, you can find some of them, I daresay, sufficiently like personal acquaintances to admit of mistaking the one for the other." Those, however, belong to the aristocracy of crime; they are criminals by calculation; they have achieved a certain amount of success, and a passable face is part of their stock-in-trade. Yet even among these the proportion of faces that will bear examination is by no means large.

Émile Gautier, who was with Prince Krapotkine in the Lyons prison, remarks that he is not acquainted with the anatomical peculiarities of criminals, but that he knows that prisoners are not like the rest of the world. "Their cringing and timid ways, the mobility and cunning of their looks, a something feline about them, something cowardly, humble, suppliant, and crushed, makes them a class apart. One would say, dogs who had been whipped; hardly, here and there, a few energetic and brutal heads of rebels."

A curious fixed look of the eye has often been considered a characteristic mark of, more especially, the instinctive criminal, a mark which cannot be disguised. "I do not need to see the whole of a criminal's face," said Vidocq, "to recognise him as such; it is enough for me to catch his eye." Lombroso finds that the eyes of assassins resemble those of the feline animals at the moment of ambush or struggle;

he has often observed it when the man has been making a muscular effort, as in compressing a dynamometer. Sometimes this feline and ferocious glance alternates with a gentle, almost feminine gaze ; this combination giving them a strange power of fascination which has often been exercised on women.

Insistence on the feline aspect is very frequent among those who describe criminals. Thus, for instance, Professor Sergi:—"I have had occasion lately to observe a homicide, aged fifteen, who three months before committing this murder had attempted another, and at another time showed his ferocious nature by attacking a cow with a bill-hook and wounding it in several places. He has been condemned to eleven years' imprisonment, is well developed for his age, and apparently has no morphological abnormalities, but he is prognathous, his nose is depressed, and all the lower part of the face, from the upper jaw down, has a savage cast. What most distinguishes him is his look ; his eye is cruel and feline in the true sense of the word. Reserved, taciturn, even when he was free, now that he is in prison he has the appearance of a wild beast, the glance of a tiger."

An interesting point in connection with the criminal physiognomy is that it is to a large extent independent of nationality. The German criminal is not very unlike the Italian, nor is the French unlike the English criminal. M. Joly remarks, "I should say that in M. A. Bertillon's office I was shown nearly sixty photographs of Irish, English, and American thieves. It would have been difficult in many cases to discern the Anglo-Saxon rather than any other physiognomy."

There is, in the opinion of many of the Italian criminal anthropologists, a special physiognomy for different crimes, though this statement is qualified by the well-known fact that quite different crimes may be committed by the same person. Dr. Marro, in his *Caratteri dei Delinquenti*, describes no fewer than eleven different classes of criminals, though the distinctions are not all physiognomical. Professor Lombroso's descriptions are however the most vigorous and picturesque, though it is scarcely possible to receive them without qualification. Thieves he describes as frequently remarkable for the mobility of their features and of their hands; the eyes are small and very restless; the eyebrows thick and close; the nose often crooked or incurved; the beard thin; the forehead nearly always narrow and receding; the complexion pale or yellowish, and incapable of blushing. In those guilty of sexual offences Lombroso finds the eyes nearly always bright; the voice either rough or cracked; the face generally delicate, except in the development of the jaws, and the lips and eyelids swollen; occasionally they are hump-backed or otherwise deformed. Sometimes in incendiaries Lombroso has noted a peculiar delicacy of the skin, an infantile aspect, and abundance of hair, occasionally resembling a woman's. The eye of the habitual homicide is glassy, cold, and fixed; his nose is often aquiline, beaked, reminding one of a bird of prey, always voluminous; the jaws are strong; the ears long; the cheek-bones large; the hair dark, curling, abundant; the beard often thin; the canine teeth much developed; the lips thin; nystagmus frequent; also spasmodic contractions on one side of the face, by which the canine teeth are exposed. The

forger and sharper, on the other hand, has frequently a singular air of *bonhomie*, a kind of clerical appearance, which is indeed necessary in his business, because it inspires confidence. Some have angelic faces ; others are small, pale, and haggard. The poisoner also frequently has a peculiarly benevolent aspect. "In general," Lombroso concludes, "born criminals have projecting ears, thick hair, a thin beard, projecting frontal eminences, enormous jaws, a square and projecting chin, large cheek-bones, and frequent gesticulation. It is, in short, a type resembling the Mongolian, or sometimes the Negroid."

It is very interesting to compare this concluding remark with some observations made by Dr. Langdon Down, who has carefully studied and endeavoured to classify the facial characteristics of idiots. Dr. Down finds a resemblance between feeble-minded children and the various ethnic types of the human family ; he specially refers both to a Mongolian and a Negroid type. Just as Professor Lombroso finds the Mongolian type most common among his criminals, so Dr. Down finds it most common among his idiots: "more than 10 per cent. of congenital feeble-minded children are typical Mongols. Their resemblance is infinitely greater to one another than to the members of their own families." Their characteristics are very marked : the hair is brownish (not black, as in the Mongol), straight, and sparse, the face flat and broad, the cheeks rounded and widened laterally, the eyes obliquely placed, and the fissure between the eyelids very narrow, the forehead wrinkled transversely, the lips large and thick, the nose small, the skin tawny. In Dr. Down's Negroid type of idiot there are characteristic cheek-bones, prominent eyes, puffy lips,

retreating chins, woolly but not black hair, and no pigmentation of skin. These points of resemblance are of considerable interest if we are of opinion that the instinctive criminal is best defined as a moral idiot.

As to the causes and indelibility of the criminal expression there is much divergence of opinion. Certain writers have spoken too incautiously on this point. Thus Professor Sergi, in the description of the homicidal lad, already quoted in part, goes on to remark: "In him nothing is acquired, everything is congenital." And Maudsley, in a sombre and powerful description of the criminal physiognomy which has often been quoted, speaks of it as branded by the hand of nature. "Everything is congenital," says Professor Sergi; yet we rarely hear of a baby who looks round from its mother's breast with fierce and feline air. We have to distinguish between the anatomical physiognomy and the expression or *mimique*. To the ordinary observer the latter is far more striking; he notices at once if a countenance is sad or merry, angry or good-tempered, cowed or elate; he does not so readily observe the shape of the jaws, or the cut of the ears, or the lines of the forehead, yet such marks as these are alone strictly organic and can safely be called congenital.

M. Joly cites some interesting examples of discrepancy in the descriptions of the same criminal under varying conditions, even when the descriptions are the work of good observers. Some years ago a youth of nineteen, named Menesclou, was executed for having violated and killed a little girl, whom he afterwards cut up and burnt. A journalist on the staff of the *Figaro*, whose reports are considered very

exact, thus described him at the trial: "Imagine a sort of abortion, bent and wrinkled, with earthy complexion, stealthy eyes, a face gnawed by scrofula, of cunning, dissipated, and cruel aspect. The forehead is low, the beard sparse and slovenly; the hair, black and thrown backwards, reaches to the shoulders; it is a head absolutely repulsive." On the other hand, the chaplain of the prison, the Abbé Crozes, thus wrote:—"Menesclou by no means resembles the portraits which the journalists have drawn of him. Far from being repulsive, hideous, repugnant, he had a sympathetic and prepossessing physiognomy, the air of a young man who has been well brought up, a gentle, honest, *naïve* face; he looked, to me, like a page in a good house."

In another example the varying descriptions have the advantage of being written by the same person, the Abbé Moreau, successor to the Abbé Crozes as chaplain to the Roquette Prison, and author of the valuable and interesting book, *Le Monde des Prisons*. "At the trial of Campi," he wrote, "I had only perceived a coarse demoniac, brutal, cynical, making violent repartees. His repellent head was photographed on my memory; a slovenly beard framing a yellow, bilious face, the muscles of a beast of prey, and, lighting up the livid features with sinister gleam, two small piercing mobile eyes, of a ferocity which I could scarcely bear to see. Campi left on me the most melancholy impression; his head had appeared to me enormous; his shoulders of extraordinary breadth." Here is another portrait by the same hand of Campi as he appeared in prison:—"I had now before me a young man of ordinary size, slim rather than broad, with a calm face lighted by a good-natured smile;

the eyes had lost their ferocity. He approached me with a certain timidity, holding his cap in his hand ; and waited respectfully until I spoke to him."

It is clear that several factors go to make up our impressions of physiognomy. It is well known that it is difficult to estimate the dimensions of an individual seen alone at a distance, whether a criminal at the bar or an actor on the stage. An actor off the stage is as commonplace as a criminal in the streets. Add to this the horror of the spectator, to whose mental vision the crime is present, and the probable perturbation of the criminal whose fate is being argued. Would the conscientious reporter of the *Figaro* have written such a description had he simply met Menesclou as a stranger in the streets? And would the worthy Abbé's impression of Campi have changed so greatly if the latter had not, when in complete command of himself, chosen to appear in an attitude of respectful humility?

In the Middle Ages there was a law by which, when two persons were suspected of a crime, the ugliest was to be selected for punishment. At the present day judges are, consciously or unconsciously, influenced by physiognomy, and ordinary human beings, who also in a humble way sit in judgment on their fellows, are influenced in the same manner. The modern criminal anthropologists, with all their minute and patient investigations, have not yet, however, succeeded in making criminal physiognomy a very exact science, and the more criminal amongst us may still find consolation in the reflection that there are no unfailing criteria by which our crimes may be read upon our faces.

§ 5. *The Body and Viscera.*

Notwithstanding their agility and spasmodic activity, the muscular system of criminals is generally feeble. Such few observations as have yet been made show that muscular anomalies are found with remarkable frequency. Thus the investigations of Guerra on the bodies of 12 normal persons and 18 criminals, showed 11 anomalous muscular conditions in the latter as against 5 in the former.

Lacassagne some years ago pointed out the remarkable length of the extended arms (*la grande envergure*). Although many observers refer to this peculiarity, and in many isolated cases it is marked and doubtless connected with the agility of criminals, as among some lower races and the apes, I am not acquainted with any extended series of observations in which criminals and normal persons are fairly compared in this respect. Marro's series, although the normal persons are in too small number, as he himself points out, is as reliable as any, and does not in the average show any preponderance of long-armed individuals among criminals. There is, however, reason to believe that individuals with exceptionally long arms are more often met with among criminals.

"Among the inmates of the Elmira Reformatory," remarks Dr. H. Wey, "the greatest physical deficiency and least resistive power is found in the respiratory apparatus. Pigeon-breasts, imperfectly developed chests, and stooping shoulders abound. During a period of eight years, with 26 deaths, 13, or 50 per cent., were from diseases of the chest, not including affections of the heart."

In his answers to my Questions a prison surgeon

remarks, "Many men have large nipples and large well-marked areolæ. This is often very remarkable." I am not aware that this has been noticed by any other observer, and the point deserves further examination.

Heart disease is common among criminals. Out of 54 examined by Flesch, 20 per cent. died of heart disease, 50 per cent. showed affections of the heart. Valvular insufficiency and cardiac atrophy seem to be remarkably prevalent. Penta found endarteritis and atheroma in 82 of his 184 instinctive criminals, *i.e.* 44 per cent., although many of them were young. The condition, he says, was diffused and pronounced; 20 of these 82 showed aortic insufficiency. It may be noted that arterial anomalies are extremely frequent. Thus Guerra found 14 arterial anomalies in his 18 criminals as against 4 in his 12 normal persons. Heart disease is also common among the insane. Its tendency to produce mental alterations has often been noted; pride, egotism, and an inclination to violence are found, especially (according to Witkowski) among those affected with ventricular hypertrophy; with aortic disease, neurotic and hysterical states; with mitral disease, melancholy and attacks of violence. This is not surprising when we remember the intimate connection that subsists normally between the heart and the brain, the vascular system forming, as it were, the basis of the brain.

The sexual organs in women criminals very frequently reveal pathological conditions. Undescended testis has been frequently found by one of the medical officers who answered my Questions. Unusual size of penis by another. It is interesting to note in this connection that Drs. Bourneville and Sollier found

exaggerated development of the glans penis extremely common among the idiots at the Bicêtre, and that among 728 individuals examined they found no fewer than 262 presenting anomalies of the sexual organs, an enormous proportion when compared with the ordinary population.¹ Ottolenghi believes that "on the whole anomalies of the genital organs have in sexual offenders no small diagnostic importance, especially when united to other characters which distinguish them from the honest and from criminals in general—as the greater frequency of fair hair, of malformed ears, of bichromatism of the iris, of blue eyes, of twisted noses, of facial asymmetry, of voluminous lower jaws, and of various neuroses, especially epilepsy."²

It may be noted here that Marro and Ottolenghi have recently studied metabolism in criminals. The chief point that comes out is an augmented elimination of phosphoric acid in the urine. The same has been observed in chronic alcoholism. These researches will, no doubt, be continued.³

§ 6. *Heredity.*

The detailed study of criminal heredity and of criminal habit, or recidivism, scarcely forms part of criminal anthropology. It is an important branch of criminal sociology. But the facts of heredity form part of the evidence in favour of the reality of the

criminal anthropologist's conclusions, and it is not possible to ignore them here entirely. Moreover, the attitude of society towards the individual criminal and his peculiarities must be to some extent determined by our knowledge of criminal heredity.

The hereditary character of crime, and the organic penalties of natural law, were recognised even in remote antiquity. They were involved in the old Hebrew conception, which seems to have played a vital part in Hebrew life, of a God who visited the sins of the parents upon the children unto the third and fourth generation. We know also the story in Aristotle of the man who, when his son dragged him by his hair to the door, exclaimed—"Enough, enough, my son; I did not drag my father beyond this." And Plutarch puts the doctrine of heredity in a shape that is both ancient and modern—"That which is engendered is made of the very substance of the generating being, so that he bears in him something which is very justly punished or recompensed for him, for this something is he." Or again—"There is between the generating being and the generated a sort of hidden identity, capable of justly committing the second to all the consequences of an action committed by the first."

There are two factors, it must be remembered, in criminal heredity, as we commonly use the expression. There is the element of innate disposition, and there is the element of contagion from social environment. Both these factors clearly had their part in Sbro . . . who is regarded by Lombroso as the classical type of "moral insanity." His grandfather had committed murder from jealousy; his father, condemned for rape, had killed a woman to

test a gun. He in his turn killed his father and his brother. Practically, it is not always possible to disentangle these two factors; a bad home will usually mean something bad in the heredity in the strict sense. Frequently the one element alone, whether the heredity or the contagion, is not sufficient to determine the child in the direction of crime. A case given by Prosper Lucas seems to show this: "In November 1845 the Assize Court of the Seine condemned three members out of five of a family of thieves, the Robert family. This case presented a circumstance worthy of remark. The father had not found among all his children the disposition that he would have desired; he had to use force with his wife and the two younger children, who up to the last were rebellious to his infamous orders. The eldest daughter, on the other hand, followed, as if by instinct, her father's example, and was as ardent and violent as he in attempting to bend the family to his odious tastes. But in one part of the family the instinct was lacking; they inherited from their mother."

The influence of heredity, even in the strict sense of the word, in the production of criminals, does not always lie in the passing on of developed proclivities. Sometimes a generation of criminals is merely one stage in the progressive degeneration of a family. Sometimes crime seems to be the method by which the degenerating organism seeks to escape from an insane taint in the parents. Of the inmates of the Elmira Reformatory, 499, or 13.7 per cent., have been of insane or epileptic heredity. Of 233 prisoners at Auburn, New York, 23.03 per cent. were clearly of neurotic (insane, epileptic, etc.

origin; in reality many more. Virgilio found that 195 out of 266 criminals were affected by diseases that are usually hereditary. Rossi found 5 insane parents to 71 criminals, 6 insane brothers and sisters, and 14 cases of insanity among more distant relatives. Kock found morbid inheritance in 46 per cent. of criminals. Marro, who has examined the matter very carefully, found the proportion 77 per cent., and by taking into consideration a large range of abnormal characters in the parents, the proportion of criminals with bad heredity rose to 90 per cent. He found that an unusually large proportion of the parents had died from cerebro-spinal diseases, and from phthisis. Sichard, examining nearly 4000 German criminals in the prison of which he is Director, found an insane, epileptic, suicidal, and alcoholic heredity in 36.8 per cent. incendiaries, 32.2 per cent. thieves, 28.7 per cent. sexual offenders, 23.6 per cent. sharpers. Penta found among the parents of 184 criminals only 4 to 5 per cent. who were quite healthy.

Even when well-marked disease is absent in the parents, exhausting and debilitating influences, age at time of conception and overwork, may play a disastrous part. Dr. Langdon Down (*Mental Diseases of Childhood*) has shown how the same influences play a part in the production of idiocy; how, for instance, a man may during periods of strain and overwork conceive idiot children, and at other periods healthy children. Marro has made some interesting investigations into the ages of the father at the period of conception of criminals, as compared with ordinary persons and with the insane. He divided the fathers into three groups, according to age at con-

ception: the first included those in the period of immaturity, which he reckoned as below 25 years of age; the second was the period of maturity from 26 to 40; the third from 41 onwards, the period of decadence. Plate VII. represents in a graphic form the percentage of fathers belonging to each period in various groups; the first column in each group representing the proportion of fathers belonging to the period of immaturity, the second those belonging to the period of maturity, the third those belonging to the period of decadence. It will be seen that the largest proportion of immature parents is among the class of thieves, although among the insane the proportion is still larger. More remarkable is the abnormally large proportion of criminals with parents belonging to the period of decadence. It is most marked among the murderers, 52.9 per cent. of whose fathers had passed the period of maturity; but it is very large also, exceeding the insane among those convicted of assault and wounding (not represented in the Plate), and among sharpers. Sexual offenders have the largest proportion of mature fathers, the smallest of youthful fathers. Suspecting that among idiots a very large proportion of elderly fathers would be found, I applied to Dr. Langdon Down, who has kindly gone through the notes of one thousand cases, and confirmed this suspicion. He finds that in 23 per cent. cases there has been a disparity of age of more than ten years at the birth of the idiot child, the father in nearly every case being the elder, and that in many cases this disparity has reached more than 25 years. It appears, then, Dr. Down adds, that the disparity of age is a factor in the production of idiocy. It may be added that the

PLATE VII.

RELATION OF AGE OF PARENTS IN NORMAL PERSONS, THE INSANE AND CRIMINAL.

elderly parent, by dying and leaving his children young and unprotected, has also a social influence in the creation of criminals.

It is interesting to compare these results with those of Korosi, Director of the Hungarian Statistical Bureau, on the ordinary population. He has investigated 24,000 cases, and found that the children of fathers below 20 are of feeble constitution; that fathers aged from 25 to 40 produce the strongest children, and that above 40 fathers tend to beget weak children. The most healthy children have a mother below the age of 35; the children born between 35 and 40 are 8 per cent. weaker; after 40, 10 per cent. weaker. The children born of old fathers and young mothers, it should, however, be added, are generally of strong constitution. If the parents are of the same age the children are less robust.

Such hereditary influences as these seem to have played a part in the production of that typical criminal by instinct, T. G. Wainewright, who appears to have had no criminals or lunatics among his ancestry. The often-quoted case of the criminal family, first mentioned by Despine in his *Psychologie Naturelle*, is interesting in this connection. Three brothers, the sons of one Jean Chrétien, had children and grandchildren as under—

	Jean Joseph	{	Jean-François, thief.
			Benoît.
			Claire, thief.
			Marie-Renée, thief.
			Marie-Rose, thief.
			Victor, thief.
			Victorine. — Victor, murderer.
Thomas	{	François, murderer.	
		Martin, murderer—(son, thief).	
Pierre	—Jean-François, thief and murderer.		

Nothing is told us of the man and his three sons who produced this awful brood, save that they were not themselves condemned criminals; but whatever the influence was, it existed in all three of the brothers, who each begat murderers and thieves. It is by subtle hereditary influences, as well as by the instinctive habits of a lifetime, that we must explain the influence of criminal contagion on men of honest life and clean record. M. Émile Gautier, a political prisoner with Prince Krapotkine and a number of French working-men in the great prison of Clairvaux, has recorded an experience which is of interest in this connection. "Out of fifty political prisoners," he writes in his interesting and thoughtful impressions published in the *Archives de l'Anthropologie Criminelle* in 1888, "belonging to the average, or even the *élite*, of the working-class population of a large town like Lyons, a good half-dozen will be found who feel themselves at home in prison, and go immediately towards the criminal-law prisoners, assuming at once, in virtue of I do not know what equivocal predestination, their language, their appearance, their habits, their mental dispositions, even the same negative morality, savagery, treachery, artfulness, rapacity, and unnatural vice."

Alcoholism in either of the parents is one of the most fruitful causes of crime in the child. To the drunkenness of Jupiter when Vulcan was conceived the Romans attributed the deformity of that god; in the words of the old Latin poet:—

" Quis nescit crudo distentum nectare quondam
 Indulsisse Jovem Junoni; atque inde creatum
 Vulcanum turpem, coelique ex arce ruendum?"

There is to-day no doubt whatever that chronic

alcoholism as well as temporary intoxication at the time of conception modifies profoundly the brain and nervous system of both parent and offspring. Some of the most characteristic cases of instinctive criminality are solely or chiefly due to alcoholism in one of the parents. When insanity and alcoholism are combined in the parents, a rich and awful legacy of degeneration is left to the offspring. Thus, one among many instances, Morel quotes a case in which the father was alcoholic, the mother insane, and of the five children one committed suicide, two became convicts, one daughter was mad, and another semi-imbecile. Carefully-drawn statistics of the 4000 criminals who have passed through Elmira, New York, show drunkenness clearly existing in the parents in 38.7 per cent., and probably in 11.1 per cent. more. Out of seventy-one criminals whose ancestry Rossi was able to trace, in twenty the father was a drunkard, in eleven the mother. Marro found that on an average 41 per cent. of the criminals he examined had a drunken parent, as against 16 per cent. for normal persons.

Nor is it necessary that the alcoholism should be carried so far as to produce great obvious injury to the parent. The action of the poison may be slow and carried on from generation to generation. The fathers eat sour grapes ; the children's teeth are set on edge.

The relation of alcoholism to criminality is by no means so simple as is sometimes thought ; alcoholism is an effect as well as a cause. It is part of a vicious circle. For a well-conditioned person of wholesome heredity to become an inebriate is not altogether an easy matter. It is facilitated by a predisposition, and alcoholism becomes thus a symptom as well as a cause of degeneration. The conclusions of Dr.

Crothers, who has devoted considerable study to this subject, are worthy of attention. He believes that we do not sufficiently study the origin of inebriety. His conclusions are—(1) that inebriety is itself evidence of more or less unsoundness; (2) in a large proportion of cases it is only a sign of slow and insidious brain disease; (3) when crime is committed by inebriates, the probability of mental disease is very strong; (4) using spirits to procure intoxication for the purpose of committing crime is evidence of the most dangerous form of reasoning mania. The crime and the inebriety are only symptoms of disease and degeneration, "whose footprints can be traced back from stage to stage."¹ It may be added that the danger of alcoholism, from the present point of view, lies not in any mysterious prompting to crime which it gives, but in the manner in which the poison lets loose the individual's natural or morbid impulses, whatever these may be.

If we set aside these slow and subtle causes and symptoms of degeneration—causes which, while they may have long been recognised, are only now beginning to be understood—there is no doubt whatever that the criminal parent tends to produce a criminal child. There are, as Vidocq said, families in which crime is transmitted from generation to generation, and which seem to exist merely in order to prove the truth of the old proverb: *bon chien chasse de race*. The investigations at Elmira showed that in 51.8 per cent. the home was "positively bad," and only "good" in 8.3 per cent. A large number of the criminals investigated by Rossi (*Studio sopra una Centuria di Criminali*) belonged to criminal families. Two typical

¹ *American Medico-Legal Journal*, June 1888.

examples may be given :—N. N., condemned for fraud and violence ; father, alcoholic, convicted of fraud ; mother, healthy ; six brothers, died young ; one brother, a monster ; another brother, born with webbed fingers ; another brother, highway-robber ; another brother, convicted of wounding ; two sisters, one insane, the other a prostitute. R. S., a thief, camorrista, convicted of wounding, etc ; father, convicted of wounding ; paternal uncle, a thief ; mother, a drunkard, convicted for fraud and wounding ; maternal grandfather, insane ; maternal uncles, camorrista ; one brother, pickpocket, who five times feigned madness ; another brother, camorrista, convicted of fraud ; another, thief ; another, receiver ; another, camorrista and thief ; a sister, honest and healthy.

Sometimes the criminal tradition is carried on through many generations and with great skill, a kind of professional caste being formed. The Johnson family of counterfeiters in America is an example of this. The grandfather was a famous counterfeiter in his day ; the next generation were well known to the police ; in the third generation criminal audacity and skill appear to have reached a very high degree in seven brothers and sisters, one of them, especially, being considered one of the most expert counterfeiters of the day ; he has spent a large part of his life in various prisons.

The so-called "Jukes" family of America is the largest criminal family known, and its history, which has been carefully studied, is full of instruction.¹ The

¹ *The Jukes: A Study in Crime, Pauperism, Disease, and Heredity.* By R. L. Dugdale. Putnam's, New York, 1877. It may be as well to mention that when Continental writers refer to the "Yueke," or "Yuke," family, they mean the "Jukes."

ancestral breeding-place of this family was in a rocky inaccessible spot in the state of New York. Here they lived in log or stone houses, sleeping indiscriminately round the hearth in winter, like so many radii, with their feet to the fire. The ancestor of the family, a descendant of early Dutch settlers, was born here between 1720 and 1740. He is described as living the life of a backwoodsman, "a hunter and fisher, a hard drinker, jolly and companionable, averse to steady toil," working by fits and starts. This intermittent work is characteristic of that primitive mode of life led among savages by the men always, if not by the women, and it is the mode of life which the instinctive criminal naturally adopts. This man lived to old age, when he became blind, and he left a numerous, more or less illegitimate, progeny. Two of his sons married two out of five more or less illegitimate sisters; these sisters were the "Jukes." The descendants of these five sisters have been traced with varying completeness through five subsequent generations. The number of individuals thus traced reaches 709; the real aggregate is probably 1200. This vast family, while it has included a certain proportion of honest workers, has been on the whole a family of criminals and prostitutes, of vagabonds and paupers. Of all the men not twenty were skilled workmen, and ten of these learnt their trade in prison; 180 received out-door relief to the extent of an aggregate of 800 years; or, making allowances for the omissions in the record, 2300 years.¹ Of the 709 there were 76 criminals, committing 115 offences.

¹ The cost being, at a very moderate estimate, 47,000 dollars for a single family during 75 years. The total cost Dugdale estimates at a million and a quarter dollars during this period, without taking into

The average of prostitution among the marriageable women down to the sixth generation was 52.40 per cent. ; the normal average has been estimated at 1.66 per cent. There is no more instructive study in criminal heredity than that of the Jukes family.

§ 7. *Tattooing.*

The practice of tattooing is very common among criminals, and is frequently carried to an extraordinary extent, twenty or thirty designs being occasionally found on the same subject. Lombroso was the first to point out the full biological and psychical significance of this practice.

Alborghetti found 15 per cent. of the inmates of the prison at Bergamo tattooed. Lombroso examined 100 children at the reformatory at Turin, and found 40 of them tattooed. Among 235 other youthful criminals he found 32 per cent. tattooed. Among the ordinary

Arms of criminal whose whole body was more or less tattooed. (Lombroso.)

consideration the entailment of pauperism and crime on succeeding generations. The hereditary blindness of one man cost the town 23 years of out-door relief for two people, and a town burial.

population tattooed children are very rarely seen. Rossi found 23 tattooed among the 100 criminals whom he has so carefully studied. Lacassagne among 800 convicted French soldiers found 40 per cent. tattooed.¹

The designs vary in character, but certain emblems are frequently repeated. Tardieu out of 160 designs found 20 relating to love, 20 to war, 8 to religion, 8 to occupation, 6 to obscene practices.

Dr. Greaves, the medical officer of Derby Prison, has kindly noted details of the tattoo marks observed on the prisoners received there during three months. Out of 555 persons admitted, 41 (40 men and one woman) were tattooed; *i.e.*, 7.3 per cent. The tattooed individuals were chiefly soldiers, with a few miners and sailors. The favourite de-

A French glazier, thief, deserter from army; had been in Africa. The chief figure on breast is St. George. (Lombroso.)

¹ For the sake of comparison with the non-criminal population, it may be mentioned that among 2739 soldiers of the Italian infantry Baroffio found only 41 tattooed—that is, 1.50 per cent.

vices were flags, ships, anchors, female figures, bracelets, and initials. There were two inscriptions, "Love" and "Jesus wept"; and among the less common devices were a crucifix, Maltese crosses, a ballet girl, a mermaid, and Chinese flower-pots. The most numerous and complex figures were all found on soldiers.

The designs most frequently found by Rossi among his 23 tattooed criminals were—portrait of mistress or nude woman (8); initials, either of self, mistress, or friend (9); a transfixed heart, an emblem sometimes of love, sometimes of vengeance (5); flowers, comets, swords, serpents, etc.

Tattooed inscriptions, as noted by Lacassagne, who has given special attention to this matter, are frequently characteristic of the criminal's mental attitude; here are a few of the commonest: "Son of misfortune," "No luck," "Death to unfaithful women," "Vengeance," "Son of disgrace," "Born under an unlucky star," "Child of joy," "The past has deceived me."

The favourite position for tattooing, among the ordinary population, is the front of the forearm; to a less degree the shoulders, the chest (especially sailors), or the fingers. All who are tattooed on the back or the sexual organs (according to Lombroso) have without exception either been among the Pacific islands or sojourned in a prison. The greater number of tattooed criminals are naturally found among recidivists and instinctive criminals, especially those who have committed crimes against the person. The fewest are found among swindlers and forgers, the most intelligent class of criminals. There is evidence that criminals frequently refrain from tattooing them-

M. J., French sailor and deserter; the nature of his crime is unknown. (Lombroso.)

selves because they know these marks form an easy method of recognition in the hands of the police. It appears that, in Italy at all events, the connection between tattoo marks and crime has been of late recognised by the common soldiers. In 1848 the soldiers of the Piedmontese army considered tattooing a mark of virility. Recently, when Lombroso asked a soldier why he was not tattooed, he replied : " Because those are the things that lead to the galleys ;" and an army doctor assured Lombroso that tattooed men were considered *a priori* as bad soldiers.

The causes that produce tattooing are doubtless of a complex kind. Religion, formerly and still among some races a chief cause of the practice, was up to 1688 practised at Bethlehem by the Christian pilgrims, and still survives at Loretto. Of 102 tattooed criminals, 31 bore religious emblems. Vengeance frequently leads to it among criminals, and among the feebler ones the spirit of imitation. Idleness often explains it among prisoners, shepherds, and sailors.¹ Vanity is almost as powerful a cause among criminals as among savages. " The more one is tattooed," said a Neapolitan soldier to Rossi, " the more one is esteemed and feared by one's com-

¹ This cause doubtless plays the chief part in keeping up the practice of tattooing among the wealthy and well-to-do. A London professor of the art, when asked by a representative of the *Pall Mall Gazette* to what class of society his customers chiefly belonged, replied : " Mostly officers in the army, but civilians too. I have tattooed many noblemen, and also several ladies. The latter go in chiefly for ornamentation on the wrist or calf, or have a garter worked on just below the knee." " On what part of the body are most of your clients tattooed ?" " Mostly on the chest or arm ; but some are almost completely covered, patterns being worked on their legs and back as well. They do not care to have patterns where they would be seen in every-day life."

panions, because it shows greater progress in the path of crime." Higher emotions always play a considerable part; and recollections of childhood and the memory of loved friends are thus recorded. Lacassagne attributes considerable importance to tattooing as a species of heraldry used by uneducated people, analogous to the banners and seals of corporations. Erotic passion is a very frequent—probably the most frequent—cause of tattooing. All sorts of symbols of love, from the initials of the loved one to the grossest emblems of unnatural passion, are very common. The tattoo designs among prostitutes are usually of this character; and such emblems are common among pæderasts and tribades. Among savages nudity is of course one of the predisposing causes, and the same cause acts among sailors and prostitutes. Lombroso attaches prime importance to atavism. In the strict sense of the word, however, I doubt very much whether we can legitimately accept the atavistic explanation. The criminal is exposed to many of the influences which lead the savage to adopt the practice, the chief of which have been already enumerated; this is a sufficient explanation of the similarity of habit, and it seems scarcely accurate to describe it as atavism. It is better described as a survival. "I regard it," Lacassagne well says in his instructive work, *Les Tatouages*, "as the uninterrupted and successive transformation of an instinct. The construction and material expression of metaphor and emblematic language were first adopted by the most elevated classes, who had no other means of communicating or materialising their thoughts. Little by little this method took refuge with those lower classes who

have as yet no better means of expressing what they feel and experience. It is in these classes also that vanity, or the need of approbation, predominates, and this has a marked influence in maintaining the custom."

Tattooing is exceedingly rare among women. Out of 300 women criminals at Turin, Gamba found only five tattooed. Soresina, who examined 1000 prostitutes at Milan, did not find one tattooed. Lombroso, out of 200 criminal women, found only one tattooed; she came from Chioggia, was an adultress who had killed her lover from jealousy, and she had associated much with sailors.¹

Among the insane tattooing does not seem always to be uncommon. In the lunatic asylum at Ancona, we learn from Dr. Riva,² out of 184 men and 147 women no fewer than 16.30 per cent. of the former, and 6.80 of the latter, were tattooed. It is worthy of note that it was chiefly among the more severe and incurable cases of mental degeneration (dementia, alcoholism, epilepsy, congenital mental weakness)

¹ "Among savage women (with the exception of the Kabyles and the Arabs) the custom," remarks Lombroso, "is very infrequent. It scarcely ever goes beyond the arms or cheeks. Still less can one say that it has been adopted by the honest women of Europe, even of the poorest class, except in some rare vallcys of Venetia where the peasant women trace a cross on their arms. Parent-Duchatelet found that prostitutes of the lowest order tattooed their arms, shoulders, armpits, or pubis with the initials or name of their lover, if young, or their tribade, if old, changing these signs, even thirty times (with the aid of acetic acid), according as their caprices changed. Among the prostitutes of Verona, as I have learnt from a police official, some instances of tattooing have been noted (hearts, initials, etc.), but only among those who had already been in prison."

² "Il tatuaggio nel Manicomio d' Ancona," *Cronaca del Manicomio d' Ancona*, Nov. 1888.

that these signs were found. In character and position they differed from those usually found among criminals, by being exclusively worked on the arms and hands, and consisting only of religious symbols, especially the Madonna of Loretto.

§ 8. *Motor Activity.*

Extraordinary and ape-like agility has frequently been noted among criminals. Every one is familiar with the daring feats of agility by which prisoners frequently escape scatheless from the hands of their guardians. This characteristic appears to be sometimes favoured by unusual length of arm. A thief, incendiary, violator, and murderer, examined by Marandon de Monthyél, showed little abnormal or criminal in his physical character, except an extraordinary agility.

Left-handedness has, by instinct or from accurate observation, been regarded with disfavour in the proverbial sayings of many nations. It is decidedly common among criminals. Examining 81 normal persons, Marro found 70 right-handed, 7 left-handed, and 4 ambidextrous. Examining 190 working-men, he only found 6 left-handed. Altogether the proportion of normal left-handed and ambidextrous persons was 6.2 per cent. Among criminals, on the other hand, with the single exception of highwaymen, the proportion of left-handed and ambidextrous persons was in every case higher. Among 40 assassins in 17.5 per cent.; among 7 incendiaries in 28.5 per cent.; among 44 burglars in 18.1 per cent. This corresponds with a greater sensory obtuseness, which has also been observed on the right side

among criminals. It is also interesting to note the ambidextrous tendency among children, savages, and idiots.

With the dynamometer, also, there appears to be a slightly greater prevalence of excess of the left hand over the right, judging from Marro's experiences. It may be of interest to note here that among normal persons the proportion in which the left hand is stronger than the right is by no means small. Thus at the International Exhibition in London in 1884 observations made under Mr. Galton's superintendence on 400 male adults—artisans, clerks, professional men, etc.—between the ages of twenty-three and twenty-six, showed that in 253 cases the right hand was stronger than the left in squeezing power; in 147 the left was stronger; in 28 both hands were equal. If we divide the individuals thus examined according to occupation the results vary curiously. Of 18 chemists, in 12 the right hand was stronger, in 5 the left, in 1 both were equal. Of 9 carpenters and joiners, in 4 the right hand was stronger, in 3 the left, in 2 both were equal. Of 87 clerks, in 52 the right hand was stronger, in 29 the left, in 6 both were equal. Of 9 medical men, in 5 the right hand was stronger, in 4 the left. Of 7 clergymen and ministers, in 3 the right hand was stronger, in 3 the left, in 1 both were equal. The high proportion of right-handed squeezers among the chemists is no doubt due to the effects of occupation, to the constant practice of gripping heavy bottles with the right hand. Occupation also, no doubt, among the carpenters and joiners, favours squeezing power in the left hand. The factor of occupation is less obvious among clerks, but would no doubt favour

the right hand, and among these the proportion keeps very close to the average among the 400. The doctors are almost as left-handed in this respect as the carpenters, though the result can scarcely be influenced by occupation ; while the clergymen, who are certainly most free from the influence of occupation in this respect, are the most left-handed of all, although here the figures are too small to allow of any very reliable results.

It seems that sufficient care has not yet been taken to determine what constitutes left-handedness. The relative strength of the two hands is not enough to decide this, for mancinism, or left-sidedness, is a matter of relative skill as well as of relative strength. It is quite possible for a person to be left-handed in some respects, right-handed in others ; thus (as happens to be the case with the present writer) he may be right-handed in regard to all those actions which are exercised habitually and socially, or which are the result of training, and left-handed in all other respects. In such a case there appears to be a natural tendency to left-sidedness, which is controlled and concealed by training, but which takes every opportunity to assert itself in more unguarded directions. It appears to me that the act of throwing a stone, an act requiring delicate nervous adjustment as well as muscular force, and which is not subjected to the influence of artificial training, is for practical purposes the most convenient and accurate test for determining left-handedness. This was the test adopted by Clapham and Clarke ; they found that 6 per cent. of the 500 criminals examined were left-handed.¹

Ottolenghi has recently investigated the anatomical

¹ *West Riding Asylum Reports*, vol. vi.

mancinism of criminals. At the suggestion of Lombroso, he has measured with Bertillon's instruments, which give the maximum of precision, the length of the hands, the middle fingers, and the feet in 100 criminals and 50 normal persons. Differences of less than a millimetre he disregarded. He found that while the right hand was longer in 14 per cent. of the normal persons, it was so in only 5 per cent. of the criminals generally, and in none of the thieves and pickpockets. In 35 per cent. of the pickpockets the left hand was longer as against 11 per cent. in the normal persons. Very similar results came out in regard to the fingers. In 38 per cent. of the normal persons the right foot was longer, in only 27 per cent. of the criminals; in this respect, however, the pickpockets (35 per cent.) most nearly approach the normal, while those convicted of wounding, who in regard to the hand are nearest to the normal, are in this respect farthest from the normal. In 15 per cent. of the normal persons the left foot was longer, in 35 per cent. of the criminals, including 55 per cent. of the cases for wounding, and in 56 per cent. of the sexual offenders. It should be added that this anatomical mancism is not necessarily related with motor mancism.¹

Anomalies of the tendon reflex of the knee are very common among criminals; they are either exaggerated or, very frequently, absent. Lombroso found feeble tendon reflexes especially common among thieves, and a very large proportion of exaggerated tendon reflexes among sexual offenders. Marro also found the highest proportion of exagger-

¹ "Il Mancinismo anatomico nei criminali," *Archivio di Psichiatria*, 1889. Fasc. VI.

ated reflexes (the enormous proportion of 40 per cent.) among sexual offenders. There was an alcoholic or insane parentage among 79 per cent. of those with exaggerated reflexes.

§ 9. *Physical Sensibility.*

The extent to which tattooing is carried out among criminals, sometimes not sparing parts so sensitive as the sexual organs, which are rarely touched even in extensive tattooing among barbarous races, serves to show the deficient sensibility of criminals to pain.¹ The physical insensibility of the criminal has indeed been observed by every one who is familiar with prisons. In this respect the instinctive criminal resembles the idiot to whom, as Galton remarks, pain is "a welcome surprise." He may even be compared with many lower races, such as those Maoris who did not hesitate to chop off a toe or two, in order to be able to wear European boots. Dr. Felkin found the maximum distance at which two points of a compass could be distinguished at the tip of the tongue was in an average European 1.1 mm., in a Soudanese 2.6 mm., in a negro 3 mm.

Lauvergne mentions a convict, imprisoned for life, who smiled with pleasure when, moxas having been applied to him, he saw his skin burning and heard it crack. Sbro . . . (who killed his brother and his father), Lombroso's favourite typical case of "moral insanity," was found by Tamburini and Seppilli to be without perception of pain when tested with

¹ At Tahiti and Viti the sexual organs were sometimes tattooed. Among 142 tattooed criminals, Lombroso found 5 with designs on the penis; Lacassagne's very extensive researches show a smaller proportion (11 out of 1,333).

a needle. Other criminals have been found very deficient in sensibility to the electric current. Dr. Nicolson remarked: "They are comparatively free from that agitation and tremulousness which are so apt to arise under circumstances involving suspense and painful foreboding. The prisoner with the knowledge of a probable flogging on the morrow, instead of giving way to restlessness and anxiety, maintains a calm and stolid behaviour." It is not uncommon to read in the newspapers of criminals who hold out their hands to be handcuffed without the slightest trembling, and who eat heartily on the eve of execution, or even while the jury above are still deliberating on their fate.

One of Rossi's hundred criminals received when a child his father's blows "as caresses," and he was able to walk with a dislocated foot from Genoa to Novi (some thirty miles); another wounded himself severely and declared that it gave him no pain. Dr. Penta, in the course of his elaborate researches, found that the majority of his 184 instinctive criminals at Santo Stefano were insensible to the pain of punctures, burns, cuts, and even grave surgical operations. "I have extirpated tumours," he remarks, "of considerable size, in the back and the neck, without the necessity of producing anæsthesia, and without causing pain; in a case of feigned epilepsy ammonia to the nose caused no reflex phenomenon, and deep puncture and burning of the skin produced no painful contraction."

This insensibility shows itself also in disvulnerability, or rapid recovery from wounds, first pointed out by Benedikt, which appears to be a frequently observed phenomenon among criminals; thus it had

been noticed by several of the medical officers of prisons who answered my Questions.¹ In this respect the instinctive criminal resembles the lower animals as well as the lower races of man ; among the Egyptians, Chinese, and Annamites, and other races, wounds heal much more rapidly than in Europe. Thus Mr. Tregear remarks :—" I have seen a Maori speared with a big rafting-spear (an iron-shod pole thicker than the wrist), the point driven through the breast, just under the collar-bone, and coming out at the back. In a week's time he walked fifteen miles, crossing a mountain range, the wound being healed."² Benedikt speaks of a brigand who, in a revolt of prisoners, had several vertebræ broken ; all his wounds healed, and the giant of former days became a dwarf, but he could work at the forge with a heavy hammer with all his old vigour. Lombroso knew a thief whose frontal bone was cloven laterally with a hatchet ; in fifteen days he was cured without any relapse. He speaks also of a murderer who, when working as a mason, was reprovèd for some fault ; he threw himself from the third storey into the court ; every one supposed he was killed, but he got up, smiling, and asked to be allowed to continue work. A pregnant woman performed on herself Cæsarean section with a kitchen knife, subsequently killing the child ; she recovered without dressings and without fever. We hear also of a criminal with a fractured rib and pleurisy who could hew wood and travel in a cart over rough mountain

¹ The dependence of disvulnerability on insensibility is well shown in Delbœuf's experiment: he made two equal and symmetrical wounds on the right and left shoulders of a hypnotised subject, and suggested insensibility on the right side. That side healed much more rapidly

² *Journal Anthropological Institute*, Nov. 1889.

roads. "Individuals who possess this quality," Lombroso remarks, "consider themselves privileged, and treat with contempt those who appear delicate and sensitive. It is a pleasure to such men to torment others whom they regard as inferior beings."

Though loud in their complaints of trivial ailments, they are often unconscious of severe illness. At Chatham, in 1888, a prisoner dropped down dead on returning from labour; both lungs were found in an early stage of pneumonia, and death was probably due to syncope; he had made no complaints to any one. Prisoners will inflict severe injuries on themselves in order to gain some very trifling object. At Chatham, in 1871-72, 841 voluntary wounds or contusions are recorded; 27 prisoners voluntarily fractured a limb, and 17 of them had to submit to amputation; 62 tried to mutilate themselves, and 101 produced wounds by means of corrosive substances. Lombroso found the general sensibility decreased in 38 out of 66. Working with Du-Bois Reymond's electrical apparatus, in conjunction with Marro, he found the sensibility of the criminals much inferior to that of the normal persons examined. Swindlers possessed much greater sensibility than murderers and thieves. Marro found sensibility, measured by an esthesiometer, most obtuse in murderers and incendiaries. Similar results were obtained by Ramlot, in reference to tactile sensibility; he examined 103 criminals and 27 normal persons, and found obtusity in 44 per cent. of the former, and in only 29 per cent. of the latter.¹ It should be noted that cases of excessive sensibility, due either to extreme pusillanimity, or to some morbid

¹ *Bulletin de la Société d'Anthropologie* of Brussels, 1885.

condition of the skin or brain, are also found among criminals.

The eyesight of criminals was found by Bono to be superior to the normal. He examined 190 youthful delinquents, and compared them with over 100 youths of similar age in an agricultural institute, the examination in all cases being made under the same conditions. The visual acuity of 49 per cent. of the criminals was superior to 1.5 Snellen; only 31 per cent. of the honest youths possessed an equal acuteness.

Ottolenghi obtained similar results.¹ He examined 100 criminals with Snellen's types in the open air, using various precautions to ensure uniformity and accuracy. The results were—

Visus (average) for	82 thieves	=1.8
„ „	18 homicides	=2.2
„ „	100 criminals	=2.0

In one of the homicides sight was exceedingly keen ($V=3$). He examined 15 warders, between the ages of 27 and 45, under the same conditions, and found vision = 1.5. Further observations on this point are needed, as previous observers (Bielakoff, for instance) have found the sight of criminals inferior to the normal. If Ottolenghi's results are confirmed by extended observation, there is an interesting analogy on this point between criminals and many lower races. Thus examinations by Seggel in 1881 yielded the following results—

Terra del Fuegians	.	.	.	V=5
Nubians	.	.	.	V=3
Georgians	.	.	.	V=1 $\frac{3}{4}$

¹ "L'occhio dei delinquenti," *Archivio di Psichiatria*, 1886. Fasc. VI.

while among German and Russian soldiers the average varied between $1\frac{2}{3}$ and 0.95.

Ottolenghi also found colour-blindness very rare ; he met with one case (green-blindness) among 460 criminals tested with Holmgren's wools. This result also corresponds with examinations of lower races, such as Samoyeds, Lapps, Esquimaux, Nubians, etc. It should be added that this result also needs confirmation, as it does not correspond with other observations. Thus Holmgren found that colour-blindness existed in 5.60 per cent. of 321 criminals, while among 32,000 of the ordinary population the proportion was scarcely 3.25 per cent. Dyschromatopsia has been found common, a fact of great significance, since this disorder is so frequently connected with grave disturbance of the nervous system.

The healthiness of eye in criminals, if confirmed, may be compared with a similar condition in imbeciles. In a study of twenty young adult male imbeciles of a minor degree than idiocy, Dr. Oliver found vision normal and colour perception apparently normal, and the eyes singularly free from the slight morbid changes so common in the eye. This condition, "which is shown by a proper balance of muscular action, a persistence of congenital hypermetropia, and an abnormally healthy appearance of the eye-ground (presenting a picture that is almost identical to the one seen during infantile existence), may be considered as significant of a type of unused, healthy, adult human eye."¹

The hearing of criminals is relatively obtuse, and

¹ Charles Oliver, "The Eye of the Adult Imbecile." *Transactions of the American Ophthalmological Society*, 1887.

they are prone to disease of the ear. Thus Dr. Gradenigo, at the request of Lombroso, undertook a series of researches into the matter,¹ in 110 instinctive and occasional criminals. Of the 82 criminal men he examined, 55 (67.3 per cent.) proved to be inferior to the normal. Of these 82, there were 40 who were instinctive criminals, and of these 29 (72.5 per cent.) had defective hearing. Of the 28 women, 15 (53.5 per cent.) possessed hearing inferior to the normal. Four of the women, however, possessed hearing much superior to the normal average.² Gradenigo found that the defective hearing was due in the great majority of cases to inflammatory affections of the middle and internal ear. He found no constant relation between defective hearing and obtuseness of touch, taste, and smell, frequently found among criminals.

Ottolenghi has examined the olfactory acuteness of 80 instinctive criminals (50 men and 30 women) and 50 normal persons of the middle and lower classes. He constructed a kind of osmometer consisting of twelve aqueous solutions of essence of cloves, contained in similar bottles in similar quantities. The solutions were graduated from $\frac{1}{80000}$ to $\frac{1}{100}$.³ Beginning with the weakest solution he noted when olfactory sensation commenced; and he also used the method of Nichols and Bailey, inviting the subject to arrange the bottles in order of intensity. The result, unlike what he had ex-

¹ *Archivio di Psichiatria*, Fasc. III-IV., 1889.

² For the sake of comparison, Gradenigo gives the result of examination of 69 men and women belonging to the ordinary population, chiefly the lower class. Of these 44.6 per cent. of the men, and 22 per cent. of the women, showed diminished hearing.

³ "L'Olfatto nei Criminali," *Archivio di Psichiatria*, 1888. Fasc.V.

pected, was to show distinctly that the olfactory sense is less developed in the criminal than in the normal person, and slightly less in the criminal women than in the criminal men. Among normal persons (as Nichols and Bailey had previously found) the olfactory sense of women is less keen than that of men. Among the 80 criminals, 8 (6 men and 2 women) possessed no olfactory sensibility; in 2 of these there was entire absence of perception, in 6 absence of specific sensation.

Ottolenghi has also investigated the sense of taste in criminals.¹ He examined 60 instinctive criminals, 20 occasional criminals, 20 normal persons of the lower class, 50 students and professional men, 20 criminal women and 20 normal women, all healthy and robust, and for the most part between the ages of twenty and fifty. The three test substances used were sulphate of strychnia, saccharine, and common salt; various precautions (attention to uniformity of amount of solution used, temperature of solution, cleanliness of mouth, etc.) were adopted in order to make a series of experiments, full of practical difficulties, as reliable as possible. From these experiments, it appeared that the sense of taste is more developed in the normal man than in the criminal, and more developed in the occasional criminal than in the instinctive criminal. He found gustatory obtuseness in 38.3 per cent. of the instinctive criminals, in 25 per cent. of the lower class men examined, and in 14 per cent. of the professional men. The criminal women also showed a larger proportion of gustatory obtuseness than the normal women. He noted, however, that the women who passed as

¹ *Archivio di Psichiatria*, 1889, Fasc. III.-IV.

normal, but who were given to vice and prostitution, showed an even larger percentage of gustatory obtuseness than criminal women. The defect in gustatory acuteness seemed to him generally to be rather of a qualitative than quantitative character. The generic excitation was produced in a large number of cases as soon as in the normal person, but the specific sensation was very retarded. The subject was conscious of a taste, but could not tell of what kind it was; that is to say, the defect was situated centrally, in the cerebral cortex, rather than in the sensorial apparatus.

It is worthy of note that criminals begin to use tobacco at an early age. Thus among a population which normally begins to smoke before the age of thirty only in the proportion of 14 per cent. (and the insane 7.2 per cent.), 22 per cent. of criminals smoke before the age of thirty, and nearly all (279 out of 300 males and 32 out of 32 women) before entering prison. Venturi¹ found tobacco used by 14.3 per cent. of normal men, 1.5 of normal women; 45.8 of criminal men, 15.9 of criminal women. Marambat² concluded that the love of tobacco was the first passion that rooted itself in the youthful criminal. Out of 603 juvenile delinquents, between the ages of eight and fifteen, 51 per cent. had acquired the custom of using tobacco before their detention.

Lombroso notes that the sensibility of criminals to the weather appears to be greater than that of the ordinary population. He found it in 29 out of 112. There were 9 who became quarrelsome shortly before

¹ *Studio sul tabacco nei pazzi e nei criminali.*

² *Revue Scientifique*, 1889.

storms, and one of these remarked that his companions always foretold bad weather when he sought to quarrel. Dostoeffsky observed that quarrels and disturbances were particularly common among the convicts in the spring. What is true of the Russian prisoners in Siberia seems also to be true of American prisoners at New York. From some tables given by Dr. Wey of Elmira it appears that marks for bad conduct are specially numerous in the spring, and also, to some extent, in the autumn.

Vaso-motor Sensibility.—Inability to blush has always been considered the accompaniment of crime and shamelessness. Blushing is also very rare among idiots and savages; the Spaniards used to say of the South American Indians: "How can one trust men who do not know how to blush?" From the investigations of Amadei, Tonnini, and Bergesio, it appears that if we compare lunatics and criminals, twice as many of the latter are incapable of blushing. Pasini, in his examinations of women, noted blushing in 21 per cent. of murderers, 20 per cent. of poisoners, 18 per cent. of infanticides, and only 10 per cent. of thieves. It was not at the mention of their offences that they blushed, but when questioned concerning their menstrual functions. Out of 130 criminal women examined by Salsotto, 50 blushed when spoken to concerning their offences. Dr. Andronico of Messina communicated to Lombroso some interesting, though too general, observations concerning the prostitutes and young female criminals in prison under his charge. "Among the inscribed prostitutes," he remarks, "none blushed when questioned concerning their occupation. I have seen some of them blush when reproached for unnatural practices. I have noted that female

homicides narrate their deeds ingenuously and without blushing; those who have poisoned their husbands blush, but partially. Among female prisoners condemned for theft, blushing shows itself first on the ears, then on the face; those who are condemned for excitation to prostitution do not blush."

In order to test the vaso-motor reactions of the criminal to various thoughts and emotions, Lombroso made a series of very interesting experiments, during the course of a year, with the sphygmograph and with Mosso's ingenious and valuable instrument, the plethysmograph. With the sphygmograph (or, rather, the hydrosphygmograph) he observed the degree of excitement produced on various individuals by the sight of wine, cigars, food, money, and photographs of nude women. The plethysmograph is a delicate instrument for measuring mental excitement, depending on the fact that the slightest emotion causes an alteration in the amount of blood present in any part of the body.¹ With the plethysmograph Lombroso found that the strongest impressions (superior to the normal) were produced by cowardice, fear of the judge, some favourite mode of excitement (wine or women), but above all, by vanity. It is not, however, easy to generalise from his observations; it is necessary for such observations to be carried on during a long period on a great number of persons, normal as well as criminal, and to be carefully controlled. They are of very great interest, for they enable us to penetrate into the most secret recesses of the mind, and to measure the force of the motives that move it. It is to be hoped that they will be

¹ See Mosso's own account of the plethysmograph in his attractively written monograph, *La Peur*, Ch. V.

conducted on a much larger scale than they have hitherto been.

All these researches into the physical sensibilities of the criminal are of the first importance, and it is necessary that they should be greatly extended and carefully checked. So far they nearly all converge to show that the criminal is markedly deficient in physical sensibility. On this physical insensibility rests that moral insensibility, or psychical analgesia, as it has been called, which is, as we shall see, the criminal's most fundamental mental characteristic.

CHAPTER IV.

CRIMINAL ANTHROPOLOGY (PSYCHICAL).

§ 1. *Moral Insensibility.*

THE moral insensibility of the instinctive and habitual criminal, his lack of forethought, his absence of remorse, his cheerfulness, had been noted long before they were exhaustively studied by Despine. In the *argot* of French criminals, conscience is *la muette*, and to induce any one to lead a dishonest life is *l'affranchir*. This moral insensibility is, indeed, a commonplace of observation with all who have come in close contact with criminals. Gall remarked: "If criminals have remorse, it is that they have not committed more crimes, or that they have let themselves be caught." Dostoieffsky, speaking from his intimate and sympathetic acquaintance with convicts in Siberia, said: "During so many years I ought to have been able to seize some indication, however fugitive, of regret, of moral suffering. I have perceived positively nothing. Seclusion and excessive work only develop among those people a profound hatred, the thirst of forbidden pleasures, and a terrible indifference." He goes on to tell of a parricide who remarked carelessly, in the course of conversation: "Take my father, for example; he was never ill up to the day of his death." "Scenes of heartrending despair are hardly ever witnessed among prisoners," observes Dr. Wey of Elmira; "their

sleep is disturbed by no uneasy dreams, but is easy and sound ; their appetites, also, are excellent.”¹ “ It is a most singular thing,” remarks Mr. Davitt, “ that I have met very few individuals in prison who gave evidence in appearance or talk of being *truly* miserable, no matter what the length of their sentence, amount of extra punishment, or contrast between their previous and their convict life may have been.”² Mr. Davitt seems inclined to attribute this sinister contentment to a sort of heroic fortitude providentially implanted in the criminal breast. He refers, however, to one man who never smiled during the time he was in Dartmoor. “ His existence seemed to be one perpetual sorrow, and he formed altogether the most striking exception to the rule of non-despairing prisoners which came under my notice during my long intercourse with Dartmoor’s criminal population.” Now this man was a Swansea stone-mason who had come home one Saturday evening “ a little fresh,” but not drunk, to find his wife in tears, and on learning that she had been insulted by a man who lived on the other side of the street, he rushed out, chisel in hand, to the man’s house and left him desperately wounded. It is clear that this man, who was sentenced to seven years’ penal servitude, was not an instinctive criminal, or an habitual criminal at all ; it was the strength of his social, and not of his anti-social, instincts which had caused his crime. He was merely a criminal by passion, and his case forms, therefore, no exception to the general rule.

On the whole we may conclude that the practice of the instinctive and habitual criminal corresponds

¹ *Physical and Intellectual Training of Criminals*, p. 53.

² *Leaves from a Prison Diary*, p. 119.

very closely with the faith of that religious sect who in Commonwealth days held "that heaven and all happiness consists in the acting of those things which are sin and wickedness," and "that such men and women are most perfect and like to God or eternity which do commit the greatest sins with least remorse."

Despine, in his *Psychologie Naturelle* (1868), studied this question on the largest scale in order to obtain exact results. "I addressed myself for this purpose," he tells us, "to the collection of the *Gazette des Tribunaux*, going back to 1825, and I soon acquired certainty that this psychical peculiarity is an invariable rule among these criminals. . . . I acquired the certainty that those who premeditate and commit crime in cold blood never experience moral remorse. I found also that those who manifest acute sorrow and real remorse after a criminal act, have committed that act either under the influence of a violent passion which has momentarily stifled the moral sense, or by accident, without intention." He concludes that the two great psychical conditions for crime are moral insensibility and perversity, with two accessory moral anomalies, imprudence and lack of foresight.

"You premeditated your crime?" said the judge. "Yes, for eighteen months." "But that is monstrous." "I know; I ought to have done it in April, but having no money, I arranged it for January." A murderer, after receiving sentence, was led out in the midst of a crowd who hurled imprecations at him. He saw a comrade and shouted to him, almost laughing—"Hallo! I've just been condemned to death." An Albanian, after having killed a traveller to rob him, lamented that the expense of the shot amounted to

five paras; he had only found four paras on the victim; that was his one regret. An assassin after his crime passed two days eating and drinking with a comrade; "he was as gay as a lark," said the latter. "But," said the judge to the accused, "one fact indicates remorse on your part: you were about to cut your throat when arrested." "That was that I might not be taken to prison."

Wainwright unblushingly avowed his atrocities. How could he kill such an innocent and trustful creature as Helen Abercrombie, he was asked once. After a moment's reflection he replied, "Upon my soul I don't know, unless it was because she had such thick legs."

It would be easy to give many similar stories exhibiting the moral insensibility of the instinctive criminal, frequently manifested in brutal bravado. They are, however, easily accessible and of sufficient notoriety. It is enough to give one more. A corporal at Paris killed an old woman, the landlady of an inn, in order to rob her. He was condemned to death without any hope that his penalty would be commuted. He knew this, but was not disturbed, and was proud of his calmness and *sangfroid*; he talked to his warders on the most various subjects, without reference, however, to his crime; read books from the prison library, and finally devoted himself to what he called the literary labours of his last hours. He had a taste for verse, and wrote a drama concerning his crime. "Death!" he often said to those around him; "I cannot fear it either as a soldier or as a philosopher. Yet it is overtaking me in my youth and strength. It is a terrible thing, but I am prepared, and I shall go to my execution courage-

ously and with head erect." The acts of this Socratic criminal agreed with his words. He slept peacefully, rose and dressed himself with a smile on his lips, glad, as he said, to find himself still in this world, where it is, after all, so pleasant to live. His appetite was always good, and he joked with the warder who attended him about the small amount of food supplied to him. "Patience!" he exclaimed, "*à la guerre comme à la guerre.*"

An executioner told Lombroso that all the highwaymen and murderers went to their deaths joking. It would, however, be a mistake to trace moral insensibility in the tranquil avocations and *bon-mots* of men who, whatever their crimes, are about to pay the extreme forfeit for them. One criminal occupied his last hours with arranging his unpublished literary works; another gave lessons in hygiene to the warders; a third remarked to those who sought to hurry him to the place of execution, "Do not be disturbed; they will not begin without me." Such stories have, however, been recorded of the most eminent political offenders in all countries.

Dr. Corre, in his interesting work, *Les Criminels*, has investigated the historic and judicial documents relative to the last moments of 88 criminals condemned to death, of whom 64 were men and 24 women. Of the men 25 died in a cowardly manner, already half-dead with fear, or else after a despairing struggle with the executioner. These were more than two-fifths of the whole number, and included many of the chief criminal celebrities, some of them educated men, doctors and priests. Four accepted their fate in a state of extreme nervous excitement, accompanied by loquacity. Twelve maintained to

PLATE IX.

the end a cynical and theatrical attitude ; these were vain individuals, often with some pretensions to literary ability ; Lacenaire is the type of them. Five died with indifference, an impassivity which recalls the insensibility of the brute or the unconsciousness of the madman. Eighteen went out of the world with a calm and resigned courage, often repentant, and prepared by the exhortations of the priest. They belonged to various social classes. Those of the lower classes were generally more sincere, and publicly avowed their guilt, holding themselves up as warnings to others ; those belonging to the middle classes, anxious to leave behind a doubt as to their guilt, declared themselves innocent ; others were silent. Of the 24 women, only 5 (about one-fifth) showed cowardice. Only one, a poisoner, showed "revolting cynicism." The rest, 18 in number, were self-possessed and resigned, frequently repentant, and generally consoled by religious administrations. In this category is included the Marquise de Brinvilliers, who for a long quarter of an hour was exposed to an immense crowd nearly naked—"mirodée, rasée, dressée et redressée par le bourreau," wrote Mme. de Sevigné—with unshaken firmness. Three-fourths of the women, little more than one-fourth of the men, are among those who died with resigned self-possession. The cynicism, cowardice, and brutal passivity of the others alike testify to moral insensibility.

Out of more than 400 murderers Bruce Thomson had known, only three expressed remorse. Of the 4000 criminals who have passed through Elmira, 36.2 per cent. showed on admission positively no susceptibility to moral impressions ; only 23.4 per cent. were "ordinarily susceptible." Dr. Salsotto, in his recent

study of 130 women condemned for premeditated assassination or complicity in such assassination,¹ was only able to recognise genuine penitence in six. He is careful to point out that precise statistics on this point are of no great value, unless they are associated with a very intimate knowledge of individual criminals; the assumed penitence is seldom real, and the real penitence is not obtrusive. Dostoieffsky, the most profound student of the human heart who has ever studied criminals intimately, has noted this fact—"In one prison there were men whom I had known for several years, whom I believed to be savage beasts, and for whom, as such, I felt contempt; yet at the most unexpected moment their souls would involuntarily expand at the surface with such a wealth of sentiment and cordiality, with such a vivid sense of their own and others' suffering, that scales seemed to fall from one's eyes; for an instant the stupefaction was so great that one hesitated to believe what one had seen and heard."

The moral insensibility of the instinctive criminal is the cause of his cruelty, a cruelty which he frequently displays from his childhood. Rossi found in ten of his 100 criminals an exaggerated and precocious cruelty; one of them, as a child, used to take young birds, pull out their feathers, and roast them alive; another revenged himself on birds for the punishments imposed on him by his parents. A certain amount of cruelty is, however, almost normal in healthy children. The instinctive criminal is more distinctively marked by his continuance of the same practices throughout life. At Buenos Ayres a man

¹ *Archivio di Psichiatria*, 1889, Fasc. III.-IV.

killed his father in order to rob him, and not finding the money, he placed his mother's feet on the fire to make her confess that of which she was ignorant. Another, after killing an entire family, played with the corpses of the children by throwing them in the air and catching them alternately. Another, mentioned by Lombroso, when shown a photograph of his wife whom he had murdered, testified to the identity without the tremor of an eyelid, tranquilly adding that after inflicting the fatal wound he had asked for forgiveness, which had not been granted. A little nursemaid poisoned the twin children under her care with the phosphorus from a box of matches, in order to procure the excitement of going out to the doctor's and the chemist's.¹

In India no motive for murder seems too unnatural or too far-fetched to be occasionally true. "A village schoolmaster in Aligarh (1881) killed one of his pupils; and a stepfather in the same district threw his two stepsons into the Ganges because he was tired of them. A man in Jhansi (1885) killed his daughter because his neighbour had slandered her, in order that the girl's blood might be upon the neighbour's head. A master murdered his servant (1881) and threw the body before his enemy's door, solely in order to bring a false charge against the latter. A similar case occurred in Azamgarh five years later: a boy was murdered by his grandfather and uncle; they threw the body into a sugar-cane field, and then charged the owner with the crime. A still stranger story comes from the Mutha District: Randbir, a Jat, who had once been a thriving man

¹ Numerous examples of the moral insensibility of criminals may be found in Dr. Corre's book, *Les Criminels* (1889), p. 157, *et seq.*

in Randbirpur, fell into the hands of the money-lenders, lost his property and his house, and became for some crooked reason embittered against his old fellow-villagers. He made up his mind to bring them into trouble. Taking his chopper with him, he met a little Chamar girl, whom he took into a temple in Bahadurpur. There he cut her throat and slightly wounded himself, and then brought a charge of dacoity and murder against the people of his old village.”¹

Such moral insensibility is, no doubt, intimately related to the physical insensibility already noted, and is of an equally morbid or atypical character. It passes far beyond that of the savage with which the moral insensibility involved in deliberately killing or injuring a fellow-creature may fairly be compared. “How you snore!” said one person to another. “Do it again, and I kill you.” An hour afterwards he killed him. Lord Gifford mentions an Australian woman of the Muliana tribe who admitted having killed and eaten two of her own children, who annoyed her by crying. (The Australian aborigines are, however, usually very tender to their children.) A Maori chief said to Mr. Tregear—“If I go out for a morning walk with my spear, and I see a man, and I push my spear through him, *that* isn’t murder—that is ‘*killing*.’ But if I invite him to my home, give him food, tell him to sleep, and then kill him, *that* is ‘*murder*.’”² Such a clear-cut distinction as this testifies to a considerable degree of moral insensibility. It must be noted,

¹ Kitts' *Serious Crime in an Indian Province*, 1889, pp. 14, 15.

² “The Maoris of New Zealand.” *Journal Anthropological Institute*, Nov. 1889.

however, that while in this respect the criminal approximates to the savage, he is at the same time related to those more or less civilised persons who tolerate killing with equanimity when it is called war.

§ 2. *Intelligence.*

The two most characteristic features in the intelligence of the average criminal are at first sight inconsistent. On the one hand he is stupid, inexact, lacking in forethought, astoundingly imprudent. On the other hand he is cunning, hypocritical, delighting in falsehood, even for its own sake, abounding in ruses. These characteristics are fully illustrated in the numerous anecdotal books which have been written concerning crime and criminals.

Several attempts have been made to attain accurate figures as to the relative intelligence of criminals, but there must be a considerable element of guess-work in such calculations. Dr. Marro, a reliable observer, detected a notable defect of intelligence in 21 cases out of 500. He found that incendiaries and then murderers yielded the largest proportion of individuals with defective intelligence; then came vagabonds, sexual offenders, those convicted of assault, highwaymen, and those convicted of simple theft. The fraudulent class, as well as pick-pockets and burglars, showed no instances of defective intelligence. That is to say that criminals against the person show a much lower level of intelligence than criminals against property.

The stupidity and the cunning of the criminal are in reality closely related, and they approximate him to savages and to the lower animals. Like the

savage, the criminal is lacking in curiosity, the foundation of science, and one of the very highest acquisitions of the highly-developed man. He is constantly compared in this respect to animals. Macé, a former chief of the Parisian *police de sûreté*, remarks: "In spite of the cunning and tricks, which are too gratuitously credited to thieves, their stupidity generally is scarcely credible; they nearly all resemble the ostrich who, when his head is hidden behind a leaf, thinks that he is not seen because he cannot see." Dr. Corre remarks: "There is something feline in the criminal: like the cat, indolent and capricious, yet ardent in the pursuit of an aim, the anti-social being knows only how to satisfy his impulsive instincts." Dr. Wey of Elmira says: "It is a mistake to suppose that the criminal is naturally bright. If bright, it is usually in a narrow line and self-repeating. Like the cunning of the fox, his smartness displays itself in furthering his schemes, and personal gratification and comfort." "Many criminal illiterates," he remarks elsewhere, "are so densely stupid as to be unable to tell the right hand from the left." M. Joly, discussing the criminal's delight in ruse, adds: "Animals are of all living things fondest of ruse when their special instincts are in action. Idle and untrained children, resolved to deceive their teachers and to amuse themselves at all risks, are more *ruse'* than their comrades at the head of the class. Women make use of ruse much more than men." I will quote, finally, on this point some words of Dr. A. Krauss¹:—"The specialists say that criminals are

¹ "Cesare Lombroso's Werk in seinem Verhältniss für Gegenwart und Zukunft der gerichtlichen Psychopathologie." *Friedreich's Blätter*, Nürnberg, 1888.

more astute than intelligent. But what is this astuteness? It is an instinctive, innate faculty, which does not depend on real intelligence, and which is already found precociously perfected in children, in the lowest savages, in women, and also in imbeciles; although experience comes to its aid, it is never capable of artificial culture. It is essentially a faculty limited to the consideration of concrete cases, and which is chiefly concerned with the deception of others. The mental inertia so often combined with this faculty is recognised in this, that a criminal, in planning a crime, does not calculate all the possible eventualities, and immediately after the success of his action he loses all caution, as if the energy of his mind directed to the project and its execution was exhausted at one stroke. Beside this instinctive faculty, intelligence is a faculty of infinite variety, which matures slowly, and gradually affects language and questions of abstract culture. It needs to be cultivated with diligence, and with the help of a happy organisation of the nervous centres. It often develops late even in highly-gifted men."

At the same time men of undoubted intellectual power are sometimes found among criminals. Villon, one of the truest, if not one of the greatest of poets, was a criminal, a man perpetually in danger of the gallows; it does not seem to me, however, by any means clear that he was what we should call an instinctive criminal. Vidocq, a clever criminal who became an equally successful police official, and wrote his interesting and instructive *Memoirs*, may not have been, as Lombroso claims, a man of genius, but he was certainly a man of great ability. Eugene Aram is now generally recognised as a comparative

philologist who foresaw and to some extent inaugurated some of the later advances of that science.

Jonathan Wild is an interesting example of a criminal of great practical ability, a man whose genius for organisation would have made him equal to any position in which he might have been placed. "In the republic of the thieves' guild"—I quote Mr. Pike's excellent summary of his career¹—"Jonathan Wild became as it were a dictator; but like many of the great men of the middle ages, he owed his greatness to double dealing. From small beginnings he became, in London at least, the receiver-in-chief of all stolen goods. He acquired and maintained this position by the persistent application of two simple principles: he did his best to aid the law in convicting all those misdoers who would not recognise his authority, and he did his best to repair the losses of all those who had been plundered and who took him into their confidence. By degrees he set up an office for the recovery of missing property, at which the government must, for a time, have connived. Here the robbed sought an audience of the only man who could promise them restitution; here the robbers congregated like workmen at a workshop, to receive the pay for the work they had done. Wild was, in some respects, more autocratic than many kings, for he had the power of life and death. If he could reward the thief who submitted to him, he could hang the robber who omitted to seek his protection. If he could, for a sufficient fee, discover what had been lost, he could, when his claims were forgotten, make the losers repent their want of worldly wisdom. He was not above his position, and never allowed such a senti-

PLATE X.

3

4

ment as generosity to interfere with the plain rules of business. He carried a wand of office, made of silver, which he asserted to be an indication of authority given to him by the government. Valuable goods he carefully stowed away in some of his numerous warehouses; and when there was no market for them in England, through the apathy of the persons robbed, or the dangers to dishonest purchasers, he despatched them on board a ship of his own to Holland, where he employed a trustworthy agent. Like barbarian monarchs, he gave presents when he wished to express a desire for friendship and assistance; and in order that the recipients of these favours might not be compromised, he retained a staff of skilled artizans, who could so change the appearance of a snuff-box, a ring, or a watch, that not even the real owner could recognise it. When satisfied with the good service of any of his subordinates who might be in danger, he gave them posts in his own household, with money and clothing, and found employment for them in clipping and counterfeiting coin. He did not even restrict his operations to London, but, in imitation of other great conquerors and pillagers, or perhaps through the independent working of his own intellect, he divided England into districts, and assigned a gang to each; each had to account to him, as the counties of old to the king, for the revenue collected. And as a well-appointed army has its artillery, its cavalry, and its infantry, so among Jonathan Wild's retainers there was a special corps for robbing in church, another for various festivities in London, and a third with a peculiar aptitude for making the most of a country fair. The body-guards of a sovereign are usually chosen for their appearance, or for tried valour

in the field. Wild's principle of selection was somewhat different. He considered that fidelity to himself was the first virtue in a follower, and that fidelity was certain only when there was absolute inability to be unfaithful. For this reason the greatest recommendation which any recruit could possess was that he had been a convict, had been transported, and had returned before the time of his sentence had expired. Such a man as this not only had experience in his profession, but was legally incapable of giving evidence against his employer. Through his actions he was always in the power of Wild, who, as the law stood, could never be in his power. Thus Wild's authority was in two ways supreme. Nor was he the first man who ever abused such authority. He did what political parties had done in earlier times. He used without stint or scruple all the means at his disposal, either to ensure his own safety, or to crush any one whom he suspected. It was necessary, according to the public opinion of his time, that a considerable number of thieves and robbers should be hanged; he satisfied at once the popular notions of justice and his own principles by bringing to the gallows all who concealed their booty, or refused to share it with himself. When required, he provided also a few additional victims in the form of persons who had committed no offence whatever. Sometimes he destroyed them because they were unfortunately in possession of evidence against himself, sometimes only because a heavy reward had been offered for the conviction of any one who might have perpetrated a great crime, and because, with the gang at his back, it was quite as easy to prove the case against the innocent as

against the guilty, and not less convenient." Wild's greatness had a sudden fall. He was arrested for coming to the rescue of a highwayman near Bow, and his enemies at once took courage. He was speedily overwhelmed with evidence, and was hanged in 1725.

§ 3. *Vanity.*

The vanity of criminals is at once an intellectual and an emotional fact. It witnesses at once to their false estimate of life and of themselves, and to their egotistic delight in admiration. They share this character with a large proportion of artist and literary men, though, as Lombroso remarks, they decidedly excel them in this respect. The vanity of the artist and literary man marks the abnormal element, the tendency in them to degeneration. It reveals in them the weak points of a mental organisation, which at other points is highly developed. Vanity may exist in the well-developed ordinary man, but it is unobtrusive; in its extreme forms it marks the abnormal man, the man of unbalanced mental organisation, artist or criminal.

George Borrow, who was so keen a student of men, has some remarks on the vanity of criminals in regard to dress:—"There is not a set of people in the world more vain than robbers in general, more fond of cutting a figure whenever they have an opportunity, and of attracting the eyes of their fellow-creatures by the gallantry of their appearance. The famous Sheppard of olden times delighted in sporting a suit of Genoese velvet, and when he appeared in public generally wore a silver-hilted

sword at his side ; whilst Vaux and Hayward, heroes of a later day, were the best-dressed men on the *pavé* of London. Many of the Italian bandits go splendidly decorated, and the very gipsy robber has a feeling for the charms of dress ; the cap alone of the Haram Pasha, a leader of the cannibal gipsy band which infested Hungary towards the conclusion of the last century, was adorned with gold and jewels to the value of four thousand guilders. Observe, ye vain and frivolous, how vanity and crime harmonise. The Spanish robbers are as fond of this species of display as their brethren of other lands, and, whether in prison or out of it, are never so happy as when, decked out in a profusion of white linen, they can loll in the sun, or walk jauntily up and down." He then describes the principal features of Spanish robber foppery.¹

More significant and even more widely spread is the moral vanity of criminals. "In ordinary society," said Vidocq, "infamy is dreaded ; among a body of prisoners the only shame is not to be infamous ; to be an *escarpe* (assassin) is the highest praise." This is universally true among every group of murderers or of thieves ; the author of a large criminal transaction is regarded by all his fellows as a hero, and he looks down upon the others with contempt ; the man who has had the misfortune to be imprisoned for a small or, in the opinion of criminal society, disreputable offence, represents himself as the author of some crime of magnitude.

A Russian youth of nineteen killed an entire family. When he heard that all St. Petersburg was talking of him, he said : "Now, my schoolfellows will

¹ *The Bible in Spain*, Chap. xl.

see how unfair it was of them to say that I should never be heard of." It is this same weak-minded desire to excite interest and sympathy which leads young men and women of ill-balanced mental organisation to commit suicide in some public and startling fashion. The same feeling, and also, doubtless, the need for expression, leads to the frequency with which criminals keep diaries. The Marquise de Brinvilliers wrote a minute account of her vices and crimes which was brought up in evidence against her ; Wainewright appears to have kept a diary of this kind which also fell into other hands ; John Wilkes Booth, the shallow-brained young actor who killed President Lincoln, had, with his stagy patriotism, some of the characteristics of the instinctive criminals, showing themselves especially in his morbid vanity. The chief suffering he felt after the deed was to his vanity. He wrote in his diary : " I struck boldly, and not as the papers say ; I walked with a firm step through thousands of his friends ; was stopped, but pushed on. A colonel was at his side. I shouted *Sic Semper* before I fired. In jumping broke my leg. I passed all the pickets. Rode sixty miles that night, with the bone of my leg tearing the flesh at every jump." And again he writes : " After being hunted like a dog through swamps, woods, and last night chased by gun-boats till I was forced to return, wet, cold, and starving, with every man's hand against me, I am here in despair. And why ? For doing what Brutus was honoured for—what made Tell a hero." And again : " I am abandoned, with the curse of Cain upon me, when, if the world knew my heart, that one blow would have made me great."

The excessive vanity of the criminal sometimes

leads him to commit the imprudence of talking about his plans beforehand, and so courting detection. Before killing three rich men, a murderer was heard to say, "I want to do something great: oh, I shall be talked about!" We hear of Wainewright's "insatiable and morbid self-esteem." He enjoyed the respect paid to him in prison, and insisted upon being treated as a gentleman. A prisoner concluded a letter to her accomplice, "Your Lucrezia Borgia." Sometimes the vanity of the criminal shows itself in the artistic or dramatic representations which he makes of his crime. Perhaps the most curious and audacious attempt is that recorded by Lombroso, who gives a representation of it: three assassins had themselves photographed as they appeared with knives in their hands and looks of resolute villainy, when about to commit the deed.

The Abbé Moreau has described the reception of a great criminal by his fellows at the prison of La Grande Roquette. He is immediately surrounded, though the curiosity remains respectful; "he is a king in the midst of his subjects; envious looks are cast at those privileged individuals who have succeeded in placing themselves near him; they listen eagerly for his slightest word; they do not speak their admiration for fear of interrupting him, and he knows that he dominates and fascinates them."

§ 4. *Emotional Instability.*

The criminal everywhere is incapable of prolonged and sustained exertion; an amount of regular work which would utterly exhaust the most vigorous and rebellious would be easily accomplished by an ordin-

ary workman. He is essentially idle; the whole art of crime lies in the endeavour to avoid the necessity of labour. This constitutional laziness is therefore one of the chief organic bases of crime. Make idleness impossible and you have done much to make the criminal impossible. It is not without reason that French criminals call themselves *pègres* (from *pigritia*), the idle. Lemaire, a notorious French criminal of the beginning of the century, was speaking for all his class when he said to his judges: "I have always been lazy; it is a shame, I admit, but I am not adapted for work; to work one needs an effort, and I am incapable of it; I only have energy for evil; if one must work I do not care about life; I would rather be condemned to death."

While he is essentially lazy, and exhibits this even in his general neglect of personal cleanliness (though sometimes dressed outwardly as an ordinary man of the world), the criminal is capable of moments of violent activity. He cannot, indeed, live without them; they are the chief events of his spiritual life.

Louis Desprez, an unfortunate *littérateur*, imprisoned at Saint-Pélagie for a literary offence, "summed up the psychology of criminals," remarks M. Émile Gautier, "in one picturesque formula: They see the world under the aspect of an immense gaol alternating with an immense brothel. And this is true. For them imprisonment is the normal condition. Liberty is their holiday, an occasional transitory holiday, during which they wallow in the *far niente* and debauch, like sailors who consume in three days the earnings of eighteen months, but a holiday which will have an end, a foreseen and expected end."

The criminal craves for some powerful stimulus,

excitement, uproar, to lift him out of his habitual inertia. That is why the love of alcohol is in all countries so strong among criminals. The man who is organised as we have seen the criminal to be must have some powerful stimulant to take him out of himself, to give him a joy which is otherwise beyond his grasp, and alcohol is the stimulant which comes easiest to hand. When, as frequently happens, he is the child of alcoholic parents, the craving for drink soon obtains morbid intensity. Crime and drink are intimately bound together, although we must beware of too unreservedly setting down drink as the cause of crime. Both crime and drink are the morbid manifestations of organic defects which for the most part precede birth. The abuse of alcohol is not, however, universal among criminals, at all events when any intellectual ability is required. "It would not do to drink in our business," said a sharper to Lombroso.

The criminal finds another strong form of excitement in gambling. The love of cards is even more widely spread among criminals than the love of drink. It frequently becomes a passion. Lauvergne tells of a band of criminals who played for two days without intermission. We hear of a French prisoner who gambled away his meagre rations of bread and wine and at last died of starvation; of another who in the excitement of the game forgot his approaching execution.

To all forms of sexual excitement, natural and unnatural, criminals of both sexes resort, often from a very early age. The prison, in which the criminal is confined alone, or with persons of the same sex, serves to develop perverted sexual habits to a high degree. Prince Krapotkine, speaking of the moral influence

of prisons on prisoners in France, writes:—"The facts which we came across during our prison life surpass all that the most frenzied imagination could invent. One must have been for long years in a prison, secluded from all higher influences and abandoned to one's own and that of a thousand convicts' imaginations, to come to the incredible state of mind which is witnessed among some prisoners. And I suppose that I shall say only what will be supported by all intelligent and frank governors of prisons, if I say that the prisons are *the* nurseries for the most revolting category of breaches of moral law."¹ There is unquestionable evidence that the same practices exist, notwithstanding all discipline, in English prisons.

Such practices grow up chiefly as a means of excitement and diversion in vacuous lives. Love, in its highest and strongest forms, seems to be extremely rare. This is true even when love is the cause of the crime. The love, even when strong, remains rather brutal. When a man was asked if he really loved the woman for whose sake he had murdered her husband, he replied: "Oh, if you had seen her naked!"

The craving for excitement, for intoxication, for uproar, finds its chief satisfaction in the love of orgy, which is now almost confined, at all events in its extreme forms, to the criminal and his intimate ally, the prostitute. The orgy is the criminal's most sacred festival; here he attains his highest experiences of

¹ *In Russian and French Prisons*, pp. 335, 336. See also Mr. Davitt's book. Salillas gives a vivid picture of the fearful extent to which sexual perversity rules in Spanish prisons, especially in the prisons for women. The governor of one prison recently used all his influence to put an end to this state of things. The women compelled him to resign.

forgetful exhilaration. Vidocq, still a criminal at heart, even after he had become a police official, has described the orgy in his *Memoirs*:—"Imagine a rather large square hall, with walls, once white, now blackened by exhalations of every kind: such is, in all its simplicity, the aspect of a temple of Bacchus and Terpsichore. At first by a very natural optical illusion, one is only struck by the smallness of the place, but when the eye succeeds in piercing the atmosphere, thick with a thousand vapours which are not inodorous, the size becomes manifest by the details which escape from the chaos. This is the moment of creation; everything clears up; the mist dissipates, becomes peopled and animated; there is movement, agitation, not of empty shadows but of substantial forms which cross and interlace in every direction. What beatitude! What a joyous life! Never for epicureans were so many felicities gathered together as here for those who love to wallow in mire. Around, rows of tables, on which, without their ever being cleaned, disgusting libations are renewed a hundred times a day, serve to frame in a space which is reserved for what are called the dancers. At the end of this infectious den rises, supported by four worm-eaten pillars, a kind of platform, its construction hidden by two or three fragments of old tapestry. On this hencoop the musicians are perched, two clarinettes, a fiddle, a loud trombone, and a deafening drum. . . . In this receptacle one finds none but prostitutes and their bullies, sharpers of all kinds, swindlers of the lowest sort, and a good many of those disturbers of the night whose lives are divided into two parts, one consecrated to rowdyism, the other to robbery."

More interesting than this resort to external sources of stimulus, and more significant of emotional instability, are the spontaneous outbursts of excitement common among criminals, curious self-evolved intoxications springing from mysterious and incalculable depths of the organism. Dostoieffsky has studied these outbursts and admirably described them. "A prisoner has lived tranquilly," he tells us,¹ "for several consecutive years, and his conduct has been exemplary. All at once, to the great astonishment of his guardians, he mutinies and recoils before no crime, even murder or rape. Every one is astonished. This unexpected explosion is the anguished, convulsive manifestation of personality, an instinctive melancholy, a desire to affirm the degraded *ego*, an emotion which obscures the judgment. It is like a spasm, an access of epilepsy; the man who is buried alive and who suddenly awakes strikes in despair against his coffin-lid; he strives to push it back, to raise it; his reason convinces him of the uselessness of all his efforts, but reason has nothing to do with his convulsions. It must not be forgotten that nearly every manifestation of the personality of the prisoner is considered a crime; also that the question whether the manifestation is important or insignificant is perfectly indifferent to the prisoner. Risk for risk, it is better to go to the extreme, even to murder. It is only the first step that costs; little by little the man is carried away and can no longer be held in." The prison has much to answer for in the development of these emotional outbreaks, and it is only in prison that there is opportunity of studying them. It would, however, be rash to conclude that they are entirely

¹ *Recollections of the Dead-House*, Chap. v.

due to prison conditions. They are in harmony with all that we know of criminal psychology, and it is not alone under prison conditions that they are the causes of crime.

In Germany these periodic explosions (known as *Zuchthaus-Knall*) have been described by Delbrück and Krafft-Ebing. In Italy they have been noted by Lombroso, especially in very hot weather and at such times as epileptic attacks are most frequent, and he regards them as fresh proof of a close relationship between the instinctive criminal and the epileptic. In England they appear to be rare in men, but, on the other hand, common in women who have, in prison language, "broken out." This wild fit of maniacal violence which from time to time seizes on the women confined in prisons, and might almost be regarded as an exaggerated or vicarious form of orgy, has been studied with some care in England. Here as well as abroad it is frequently supposed to be a voluntary insubordination deserving punishment.

A lady superintendent thus described the "breaking out" to Mayhew:—"Sometimes they know when the fit is coming on, and will themselves ask to be locked up in the refractory wards. When they're in these fits they're terribly violent indeed; they tear up and break everything they can lay their hands on. The younger they are the worse they behave. The most violent age, I think, is from seventeen to two or three and twenty;—indeed they are like fiends at that age very often." The medical officer told him that "4 per cent. of the whole of the prisoners, or 20 in 600, were subject to such fits of violent passion, and these were almost invariably from fifteen to twenty-five years of age. "Women," he added, "seldom injure

themselves or those around them, though they will break their windows, and even occasionally tear their own clothing to ribbons."¹

Miss Mary Carpenter, in her *Female Life in Prison*, reproduces what she tells us is a characteristic dialogue:—

“‘Miss G., I’m going to break out to-night.’

“‘Oh, nonsense; you won’t think of any such folly, I’m sure.’

“‘I’m sure I shall.’

“‘What for?’

“‘Well, I’ve made up my mind, that’s what for. I shall break out to-night—see if I don’t.’

“‘Has any one offended you or said anything?’

“‘N-no. But I *must* break out. It’s so dull here. I’m sure to break out.’

“‘And then you’ll go to the “dark” [cell].’

“‘I want to go to the “dark.”’

“And the breaking out often occurs as promised; the glass shatters out of the window frames; strips of sheets and blankets are passed through or left in a heap in the cell; the guards are sent for, and there is a scuffling and fighting and scratching and screaming that Pandemonium might equal, nothing else.”

Dr. Nicolson has made an interesting observation as to the periods when these “breakings-out” are most liable to occur. “At dates corresponding with the menstrual period there is a greater likelihood of their occurrence. Besides having verified this in several cases myself, I have the testimony of experienced prison matrons to the same effect.” These maniacal outbursts of hysteria may be compared to the somewhat similar effects observed especially at

¹ H. Mayhew, *Criminal Prisons of London*, 1862, p. 188.

the menstrual periods among the epileptic, the insane, and the imbecile. Thus Dr. H. Sutherland (*West Riding Asylum Reports*, vol. ii.), from observations on 500 inmates of the West Riding Asylum, remarks that in epileptic insanity the fits are generally increased in number, and the patients generally become excited at the catamenial period; while the mania exacerbations usually occur at this time. He notes the frequency of excitement, violence, indecent language, tearing up clothes, etc., among insane women generally at this period. In a girl with congenital imbecility, who became violent, cruel, and capricious at puberty, Dr. Langdon Down noted that the monthly period was always marked by insubordination, violent language, rude gestures, and untruthfulness. In ordinary healthy young girls the onset of the monthly period is often marked by a fit of unusual boisterousness.

The period of the year seems also to have some influence on the emotional instability. Miss Carpenter remarks that "the prisoners are always the most ill-behaved at Christmas time," perhaps because this period has, even before the days of Christianity, been associated with excesses. Among the men at Elmira, judging from the charts given by Dr. Wey, there is a tendency to insubordination in the autumn, and also in the spring. In Spanish prisons, it appears from Salillas's *Vida Penal en España*, quarrels and arrests are much more common in spring and summer than at any other season. Thus, to take one record: March–May, 8; June–Aug., 9; Sept.–Nov., 4; Dec.–Feb., 3. Two suicides both occurred in September.

Very interesting is the instinctive and irresistible

character of criminal impulses, as shown by evidence which there is no good reason to impeach. Casanova, speaking of his clever schemes of fraud, says: "When I put into execution a spontaneous idea which I had not premeditated, it seemed to me that I was following the laws of destiny, and yielding to a supreme will." Several pickpockets have said to Lombroso: "You see, in those moments of inspiration (*sic*) we cannot restrain ourselves, we have to steal." "I did try very hard, Miss," the women will sometimes say to the matron, remarks Miss Carpenter, "but it wasn't to be. I was obliged to steal, or to watch some one there was a chance of stealing from. I did try my best, but it couldn't be helped, and here I am. It wasn't my fault exactly, because I *did* try." A pickpocket said to Marro: "When I see any one pass with a watch in his pocket, even though I have no need of money, I feel a real need to take it." Dostoieffsky, giving a minute account of one of the convicts who was most feared, but who was sincerely devoted to him, says: "He sometimes stole from me, but it was always *involuntary*; he scarcely ever borrowed from me, so that what attracted him was not money or other interested motive." Once it was a Bible which he sold to obtain drink. "Probably he felt a strong desire for drink that day, and when he felt a strong desire for anything it had to be satisfied. I endeavoured to reproach him as he deserved, for I regretted my Bible. He listened to me without irritation, very peacefully; he agreed with me that the Bible is a very useful book, and he sincerely regretted that I no longer possessed it, but he felt no repentance, not even for an instant, for having stolen it; he looked at me with such assurance that

I immediately ceased to scold him. He bore my reproaches because he judged that it could not be otherwise, that he deserved to be blamed for such an action, and that I ought to abuse him, in order to relieve myself, as a consolation for the loss; but privately he esteemed it a folly, a folly which a serious man would have been ashamed to speak of. I even think he regarded me as a child, an urchin who does not understand the simplest things in the world."

Precisely the same instinctive and involuntary impulses, unaccompanied by shame, are found among various lower races. Of the natives of British New Guinea, for instance, it has been said, "They are inveterate thieves, but they experience no sense of shame when they are discovered. They frequently say that they can feel an irresistible power which compels them to put out their hand and close it upon some article which they covet, but which does not belong to them."¹

§ 5. *Sentiment.*

It may seem a curious contradiction of what has already been set down concerning the criminal's moral insensibility, his cruelty, and his incapacity to experience remorse, when it is added that he is frequently open to sentiment. It is, however, true. Whatever refinement or tenderness of feeling criminals attain to reveals itself as what we should call sentiment or sentimentality. Their cynicism allies itself with sentiment in their literary productions. Their unnatural loves are often sentimental, as

¹ Report of British Special Commissioner, 1887.

PLATE XI.

1.

2.

3.

4.

revealed in the character of the tattoo marks. Two interesting examples of criminal sentiment have recently been recorded by Dr. Lindau. A German criminal (it is perhaps as well to note that he was a German), having murdered his sweetheart most cruelly, went back to her house to let out a canary which might suffer from want of food. Another, after having killed a woman, stayed behind to feed her child which was crying. Lacenaire, on the same day that he committed a murder, risked his own life to save that of a cat. Eugene Aram was very indulgent to animals. Wainewright was always very fond of cats; in his last days "his sole companion was a cat for which he evinced an extraordinary affection." One of the chief characters of Wainewright's essays is their sentimentality. Himself, when in prison, he described as the possessor of "a soul whose nutriment is love, and its offspring art, music, divine song, and still holier philosophy."

All prisoners make pets of birds, or animals, or flowers, if they get the chance. This is simply the result of solitude, and has no connection whatever with criminal psychology. It is found, if anything, more frequently among non-criminal prisoners. No one has described better than Dostoieffsky, in his *Recollections of the Dead-House*, the part that animals play in the lives of prisoners. He describes at length the goat, the horse, the dogs, the ducks, the eagle. No one who has once read it may forget the history of the eagle. The eagle would not be tamed; solitary and inconsolable he refused all food; at last his mournful despair aroused the sympathy of the convicts; they resolved to liberate him, bore him to the

ramparts on the cold and grey autumn afternoon, and stood long and wistfully watching him as he winged his way across the steppes, free.

Family affection is by no means rare among criminals. Often indeed, as is well known, it constitutes the motive for the crime. It is very rare to find a prisoner who is not touched by an allusion to his mother. Inspector Byrnes, of New York, says: "Remember that nearly all the great criminals of the country are men who lead double lives. Strange as it may appear, it is the fact that some of the most unscrupulous rascals who ever cracked a safe, or turned out a counterfeit, were at home model husbands and fathers. In a great many cases wives have aided their guilty partners in their villainy, and the children too have taken a hand in it. But in as many all suggestions of the criminal's calling was left outside the front door. There was George Engles, the forger. His family lived quietly and respectably, mingled with the best of people, and were liked by all they met. George Leonidas Leslie, *alias* Howard, who was found dead near Yonkers, probably made away with by his pals, was a fine-looking man, with cultured tastes and refined manners. Billy Porter and Johnny Irving were not so spruce, but they would pass for artisans; and Irving is said, in all his villainy, to have well provided for his old mother and his sisters. Johnny the Greek paid for his little girls' tuition at a convent in Canada, and had them brought up as ladies, without even a suspicion of their father's business reaching them. I know this same thing to be done by some of the hardest cases we have to contend with."

Inspector Byrnes also mentions a celebrated burglar

and forger of America, called by the fraternity "the Prince of Thieves," on account of his great liberality; "it is a well-known fact that he has always contributed to the support of the wives and families of his associates when they were in trouble."

The criminal appreciates sympathy. Dostoieffsky tells how immediately the convicts responded to a governor who was affable and good-natured, and treated the prisoners as equals: "They did not love him, they adored him. . . . I do not remember that they ever permitted themselves to be disrespectful or familiar. On the contrary. When he met the governor the convict's face suddenly lighted up; he smiled largely, cap in hand, even to see him approach." Prince Krapotkine quotes and confirms the observations of Dr. Campbell, an experienced prison surgeon. By mild treatment, says Dr. Campbell, "with as much consideration as if they had been delicate ladies, the greatest order was generally maintained in the hospital." He was struck with that "estimable trait in the character of prisoners—observable even among the roughest criminals; I mean the great attention they bestow on the sick. The most hardened criminals," he adds, "are not exempt from this feeling."

Such sentiment as this—limited, imperfect, fantastic, as it may sometimes seem—is the pleasantest spot in criminal psychology. It is also the most hopeful. In the development of this tenderness lies a point of departure for the moralisation of the criminal. What a ruined fund of fine feeling, for instance, was concealed in the young thief, recorded by Lombroso, who committed suicide by hanging, having first set his shoes on the bed between two straw crosses, as though to

say, "I am going; pray for me." "If one thinks of it," adds Lombroso, "it is a pathetic poem."

§ 6. *Religion.*

In all countries religion, or superstition, is closely related with crime. The Sansya dacoits, in the Highlands of Central India, would spill a little liquor on the ground before starting on an expedition, in order to propitiate Devi. "If any one sneezed, or any other very bad omen was observed, the start was postponed. If they heard a jackal, or the bray of the village donkey, their hearts were cheered; but a funeral or a snake turned them back. They were also very superstitious about their oil. The vessel was not allowed to touch the ground until the oil had been poured upon the torch, and then it was dashed on the earth; and from that moment until the job was finished no water touched their lips."¹

Among 200 Italian murderers Ferri did not find one who was irreligious. "A Russian peasant," remarks Mr. Kennan, "may be a highway robber or a murderer, but he continues nevertheless to cross himself and say his prayers." Dostoeffsky also notes the religious ardour with which the convicts gave candles and gifts to the church. All those who live by unlawful methods, said Casanova, confide in the help of God. Naples is the most criminal city in Europe for crimes against the person; the number of murderers there is about 16 in 100,000, while in Italy generally it is 8.12; and in Ireland (the least criminal land in Europe) it is about 5. Naples is also the most religious city in Europe. "No other

¹ Kitts, *Serious Crime in an Indian Province*, p. 83.

city," observes Garofalo,¹ "can boast of such frequent processions; no other, perhaps, is so zealous an observer of the practices of the church. But unfortunately—as an illustrious historian [Sismondi], speaking of the Italians of his day, wrote—'the murderer, still stained with the blood he has just shed, devoutly fasts, even while he is meditating a fresh assassination; the prostitute places the image of the Virgin near her bed, and recites her rosary devoutly before it; the priest, convicted of perjury, is never inadvertently guilty of drinking a glass of water before mass.' Those words of Sismondi's," Garofalo adds, "are as true to-day as when they were written." Of Marro's 500 criminals, 46 per cent. were regular frequenters of church, 25 per cent. went irregularly. Among sexual offenders the proportion of frequenters rose to 61 per cent. A man of sixty, known to Marro, imprisoned for rape on a child of eight, was much scandalised at the irreligious talk of some of his companions. "I do not imitate them," he said; "morning and evening I say my prayers."

Among women, the governor of Saint Lazare remarked to M. Joly, it is especially the criminals by passion who are superstitious, thieves very slightly so; they are practical women.

It must not be supposed that there is insincerity or hypocrisy in the religion of criminals. For the man of low culture the divine powers lend themselves easily to the succour of the individual, and it is always as well to propitiate them. German murderers believe they can do this crudely, according to Casper, by leaving their excrement at the spot of the crime. A rather higher grade of intelligence will

¹ "La Criminalita nella provincia di Napoli." *L'Anomalo*, Feb. 1889.

effect the same end by prayer. A wife who was poisoning her husband wrote to her accomplice:—“He is not well . . . if God wished it. Oh, if God would have pity on us, how I would bless Him! When he complains [of the effects of the poison] I thank God in my heart.” And he answers, “I will pray to Heaven to aid us.” And she again, “He was ill yesterday. I thought that God was beginning His work. I have wept so much that it is not possible God should not have pity on my tears.” Lombroso found 248 tattooed prisoners out of 2480 bearing religious symbols, while the slang of criminals witnesses to a faith in God, in the immortality of the soul, and in the church. When a woman who had strangled and dismembered a child, in order to spite its relations, heard her sentence of death pronounced, she turned to her advocates and said, “Death is nothing. It is the salvation of the soul that is everything. When that is safe, the rest is of no account.”

It is clear how easily religious beliefs and religious observances, especially in Catholic countries, lend themselves to the practices of the ignorant criminal, and it very rarely happens that the criminal condemned to death fails to avail himself of the ministrations of the chaplain (only once in more than thirty years at La Roquette), and frequently to respond to them with gratifying eagerness. In religion his primitive emotional nature, with its instability and love of sentiment, easily finds what it needs. A French chaplain of experience and intelligence told M. Joly that he had “more satisfaction” with his prisoners than with people of the world. The Rev. E. Payson Hammond, who has conducted many missions to

prisoners, finds very great aptitude for conversion among them. Of the convicts of the State Prison of Jefferson City, in the United States, for instance, he remarks :—" Many hearts were melted to tears, and I believe that a very large number were converted." " Convicts at their last hour," wrote Lauvergne, " nine times out of ten die religiously. Whatever the enormity of their crimes, they all leave durable recollections in the heart of the priest who assists them. He sees them long afterwards in his dreams, beautiful and happy."

When the criminal is not superstitiously devout, he is usually stupidly or brutally indifferent. Maxime du Camp, during a visit to the prison of Mazas, at service time on Sunday, had the curiosity to look into thirty-three cellules, to observe the effect of the ceremony : three were reading the mass ; one stood up, with covered head, looking at the altar ; one was on his knees ; one displayed a prayer-book, but was reading a pamphlet ; one wept with head buried in his arms ; twenty-six sat at their tables, working or reading.

It seems extremely rare to find intelligently irreligious men in prison. The sublime criminals whom we meet with in Elizabethan dramas, arguing haughtily concerning Divine things and performing unheard-of atrocities, are not found in our prisons. Free-thinkers are rarely found. A trifle will induce the prisoner to inscribe himself as Protestant, instead of Catholic, or *vice versa*, or to change from one side to the other ; but out of 28,351 admissions to three large metropolitan prisons, remarks the Rev. J. W. Horsley, only fifty-seven described themselves as atheists, and this number, he adds, must be

further reduced as containing some Chinese and Mahommedans. It should be noted that a profession of atheism would deprive the prisoner of no advantage or privilege open to the others. Mr. Horsley once resolved to keep notes of the first twelve consecutive cases of those who on entrance described themselves either positively as atheists or negatively as of no religion. The results were interesting: 1 was a thief, a rather ignorant person, whose chief reason for being an infidel was that his parents had "crammed religion down his throat." 2 an ex-soldier, a heavy drinker, and when asked why he had described himself as an atheist, "he said he only called himself mad;" he was actually insane. 3 a burglar, who said he meant that he never attended church because he had seen so much hypocrisy among professing Christians; in a few days he gave up the designation of atheist. 4 was a swindler, a great liar, and probably insane. 5 was a lad of nineteen, of very little intellect, who had deserted from the army; his father had been "a follower of Bradlaugh." 6 a German Jew, who frequented Christian churches, but not having been baptised, simply did not know how to describe himself. 7 an intemperate schoolmaster, charged with deserting his family; he meant that he had ceased to attend religious worship because he was conscious that his religion was merely formal; his "atheism" was simply a form of penitent self-abnegation. 8 a conceited lad of seventeen who had assaulted his guardian, and had adopted atheism to justify his spirit of revenge. 9 a young man who had robbed his employer; he was brought up under religious influences, but having attracted attention by objecting to revealed religions, became

PLATE XII.

I

2

4

a Secularist lecturer. 10 a prostitute and dipsomaniac with 150 convictions; always called herself an atheist when she was in a bad temper or drunk. 11 a young baker who had taken poison; called himself an atheist under influence of laudanum; goes regularly to a Congregational Chapel. 12 a girl of fifteen; she meant that she rarely, if ever, attended any place of worship. So that only in two or three, or at most four cases out of the twelve, was there profession of atheism in any legitimate sense of the word.

§ 7. *Thieves' Slang.*

Every profession, every isolated group of persons, almost every family possesses a more or less extended set of words and phrases which are unintelligible to strangers. This dialect is termed in English *slang*, in French *argot*, in Italian *gergo*. The most highly developed and the most widely extended slang of this kind is that used by habitual criminals. Every country has its own thieves' slang, but within the bounds of that country the slang is generally intelligible; the Lombard thief, Lombroso remarks, can understand the Calabrian; Parisian *argot* is intelligible at Marseilles. The use of criminals' slang marks the recidivist. "When a man talks *argot*," said the Abbé Crozes, "he is registered in the army of evil-doers."

"I was jogging down a blooming slum in the Chapel, when I butted a reeler, who was sporting a red slang. I broke off his jerry, and boned the clock, which was a red one, but I was spotted by a copper, who claimed me. I was lugged before the

beak, who gave me six doss in the Steel. The week after I was chucked up I did a snatch near St. Paul's, was collared, lagged, and got this bit of seven stretch." That is a pickpocket's history of his arrest as narrated to Mr. Davitt. Here is the translation:—"As I was walking down a narrow alley in Whitechapel, I ran up against a drunken man, who had a gold watch-guard. I stole his watch, which was gold, but was seen by a policeman, who caught me and took me before the magistrate, who gave me six months in the Bastille [the old House of Correction, Coldbath Fields]. When I was released I attempted to steal a watch near St. Paul's, but was taken again, convicted, and sentenced to seven years' penal servitude."

Mr. Horsley has an interesting passage on English thieves' slang, which I will transcribe at length:—"Of multifold origin, it is yet mainly derived from Romany or gipsy talk, and thereby contains a large Eastern element, in which old Sanskrit roots may readily be traced. Many of these words would be unintelligible to ordinary folk, but some have passed into common speech. For instance, the words bamboozle, pal (companion, a friend), mull (to make a mull or mess of a thing), bosh (from the Persian), are pure gipsy words, but have found some lodging, if not a home, in our vernacular. Then there are survivals (not always of the fittest) from the tongue of our Teutonic ancestors, so that Dr. Latham, the philologist, says—"The thieves of London" (and he might still more have said the professional tramps) 'are the conservators of Anglo-Saxonisms.' Next there are the cosmopolitan absorptions from many a tongue. From the French *bouilli*

we probably get the prison slang term 'bull' for a ration of meat. 'Chat,' thieves' term for house, is obviously *château*. 'Steel,' the familiar name for Coldbath Fields Prison, is an appropriation and abbreviation of Bastille; and he who 'does a tray' (serves three months' imprisonment) therein, borrows his word from our Gallican neighbours. So from the Italian we get *casa* for house, filly (*figlia*) for daughter, donny (*donna*) for woman, and omee (*uomo*) for man. The Spanish gives us *don*, which the universities have not despised as a useful term. From the German we get durrynacker, for a female hawker, from *dorf*, a village, and *nachgehen*, to run after. From Scotland we borrow *duds* for clothes, and from the Hebrew *shoful* for base coin. Purely of native manufacture, however, and entirely artificial, are the two classes of rhyming and back-slang which mingle with cant to make a whole. By the former, any word that rhymes with the one you mean to use is put in its place, and gradually becomes accepted. This has the merit of unintelligibility when it is desired not to let chance passers-by know of what we are speaking, which naturally occurs not seldom in the days of detectives and plain-clothes constables. Suppose I have 'touched' (*i.e.*, been successful in some robbery), and feel inclined for some relaxation in company with my sweetheart (or one of them), I might address her thus—'Come, cows and kisses, put the battle of the Nile on your Barnet Fair, and a rogue and villain in your sky-rocket; call a flounder and dab with a tidy Charing Cross, and we'll go for a Bushey Park along the frog and toad into the live eels.' This would apparently be but a pendant to the celebrated bit of nonsense extemporised by

Foot, but, as a matter of fact, to a master or mistress of rhyming slang it would at once be understood as— ‘Come, missus, put a tile (hat) on your hair, and a shilling in your pocket; call a cab with a tidy horse, and we’ll go for a lark along the road into the fields.’ And the second class of manufactured slang is that largely patronised by costermongers. It is called back-slang, and simply consists of spelling (more or less accurately) words backwards. Thus—‘Hi, yob! kool that enif elrig with the nael ekom. Sap her a top o’ reeb and a tib of occabot,’ is only, ‘Hi, boy! look at that fine girl with the lean moke (donkey). Pass her a pot of beer and a bit of tobacco.’ The art or merit of this form of slang consists in the rapidity, often remarkable, with which such words can be reversed. Thus a gentleman, wishing to test the skill of a professor of the art with a word not in common use in the market, asked his coster friend what was the back slang for hippopotamus. At once he answered, ‘Summatopopy,’ the *y* being euphoni-ously put for *ih*.¹ Mr. Davitt thus describes a form of slang (“thieves’ Latin”) commonly used by professional burglars and the superior order of thieves:— “Its chief peculiarity consists in reversing the position of the syllables of a word containing more than one syllable, and making two syllables of all words having only one in ordinary pronunciation, by adding a vowel or liquid consonant to the first or second part of such word. By the application of this simple rule to slang words, the ‘lingo’ becomes too complicated for any but the initiated to understand. For instance, if two thieves were hunting for game, and one were to see a policeman, he

¹ *Jottings from Jail*, pp. 2-4.

would shout to his comrade—'Islema! Ogda the opperca!' which in slang is—'Misle! Dog the copper!' Otherwise—'Vanish! See the policeman!'"¹ Very similar practices prevail in the thieves' slang of France, Italy, Spain, and India. It is doubtless, indeed, universal. Closely allied is the kind of slang called *largongi*, by which, for example, *macaroni* becomes *lacaronimique*, and *vache*, *lachevane*.

The chief interest of the slang of habitual criminals is psychological. It furnishes us with a curious insight into the mental processes of those who invent and use it; it is itself an embodiment of criminal tendencies; in Victor Hugo's vigorous phrase, "C'est le verbe devenu forçat." It is full of metaphorical expressions, of objects named after their attributes. Nearly everything is degraded, sometimes with coarse and fantastic wit. "While the imagination of the poet gives a soul to animate objects," remarks M. Joly, "the imagination of the criminal transforms living forms into things, assimilates man to animals." Thus the skin for them is leather, the face *un mufle*, the mouth *un bec*, the arm *un aileron*. The body is called the corpse, and to eat is to put something in one's corpse. The woman who supports a bully is called his saucepan (*marmite*), a friend *un poteau*; *ne pas être méchant* means to be a fool. Everything is thus vulgarised. The criminal instinctively depreciates the precious coinage of language, just as to his imagination money is at Paris "zinc," and in the Argentine Republic "iron."

The soul in French *argot* is significantly called *la fausse*, and the conscience *la muette*; shame is

¹ *Leaves from a Prison Diary*, p. 108.

simply *la rouge*. In English slang, as Mr. Horsley remarks, "the delicate expression 'fingersmith' is descriptive of a trade which a blunt world might call that of a pickpocket. Or, again, to get three months' hard labour is more pleasantly described as getting thirteen clean shirts, one being served out in prison each week. The tread-wheel again is more politely called the everlasting staircase, or the wheel of life, or the vertical care-grinder. Penal servitude is dignified with the appellation of serving her Majesty for nothing, and an attempt is even made to lighten the horror of the climax of a criminal career by speaking of dying in a horse's night-cap—*i.e.*, a halter." So that while the better things of life are degraded, there is a tendency to elevate those that truly indicate degradation.

The criminal slang of France and Italy has been studied in its psychological bearings much more thoroughly than the English, by Mayor, Lombroso, and others. Lombroso considers that the most marked and most curious characteristic of criminal slang is that already noted by which a thing is designated by its most salient qualities from the criminal point of view. Thus the advocate becomes the *blanchisseur* or *imbiancatore* (washerman); the *juge d'instruction*, the *curicux* or the *père sondeur*; the sermon, *l'ennuyeuse* or *tediosa*; the purse is *la santa*; the court, *la juste*. "The guillotine," remarks M. Joly, "is designated without imprecation, without contempt, without hatred, but with a wealth of expressions and with a resignation, one might almost say a fatalistic humour, which is not reassuring for them—or for others. The executioner himself is called the *juge de la pair*."

Etrangler un perroquet is to drink a glass of absinth, the allusion being to the colour (green), and also, it is said, to the sensation in swallowing the absinth, and to other minute points. A prostitute is the *hôtel du besoin*, a *Louis-quinze*, and also the *bourre-de-soie*, in allusion, it is said, to murmured offers and a silk dress; the brothel is *le cloaque*. In Venetian slang a promise is called a shadow. In Bavarian cant a playing card is *karzerweg*—the road to prison.

Very strange, remote, and bizarre are some of these slang synonyms, full of coarse ironies and jests. *Paradouze* = *paradis* (*douze* instead of *dise*); *saucisse* = *moi* (by way of *moi-s-aussi*); *crottard* = *trottoir*; *blanchir du foie* = to intend betrayal (play on *foi*); *perdreau* = *pederaste* (*pedro-pédero*); *herbe sainte* = *absinthe*; *être dans l'infanterie* = to be pregnant (*enfant*); *moulin à vent* = *derrière*; *pape* = *verre de rhum* (*Rome*); *veronique* = *lanterne* (*verre*); *vert-de-gris* = *absinthe* (play on *vert* and *verre*, with allusion to its deleterious properties); *demoiselle du Pont-neuf* (that all may go over) = prostitute; *apaier* = to assassinate; *boire dans la grande tasse* = to drown oneself; a knife is a *lingre* (from Langres, the French Sheffield); the *souteneur* (a prostitute's bully) is called by the English word *fish*, or some similar name (*poisson*, *goujon*, *baraillon*, *maquereau*); the prostitute is called *morue*, and *Banc de Terre-Neuve* is applied to that portion of the Parisian boulevards lying between the Madeleine and the Porte Saint-Denis.

Sometimes the slang of criminals, like that of the rest of the world, commemorates an historical fact. To dethrone in France is *juilletiser*. The sun is *le grand Jablo*, Jablochhoff's electric lamps having been

the first used to illuminate Paris. A *coup de Raguse* is a defection, in allusion to the Duke of Ragusa. In Italy a drunkard is called a Frenchman, a beggar a Spaniard, a card-sharper a Greek. In Spain a thief is called a *Murcio*, from the province of Murcia.

Words are frequently abbreviated. As examples, Lombroso mentions *tra* = *travail*; *ces mess* = *ces Messieurs* = the police; *chand* = *marchand*; *lubre* = *lugubre*; *abs* = *absinthe*; *avoir ses aff* = *avoir ses affaires* (*menstrues*); *mac* = *maquereau* = *souteneur*, of a prostitute.

Very curious are the large number of foreign words, in more or less corrupted form generally, which are to be found in criminal slang. In the German cant Hebrew words are numerous; German and French in Italian; German and English in French; Italian and Romany in English. "Hebrew, or rather Yiddish," Lombroso observes, "supplies the half of Dutch slang, and nearly a fourth of German, in which I counted 156 out of 700, and in which all the terms for various crimes (except *band-spicler* for a cheater at dice) are Jewish." The presence of archaisms, classical and mediæval, is also curious.

It is more interesting to find a revelation of the things in which the criminal is most intimately interested by noting the wealth and variety of synonyms for certain words. Thus Cougnet and Righini found 17 words for warders or police; 9 for the act of sodomy; 7 for plunder. French cant has 44 synonyms for drunkenness, besides 20 for drinking, and 8 for wine, in all 72; while there are only 19 for water and 36 for money.

This slang is largely of ephemeral life, but a considerable proportion is permanent. Its tendency is,

PLATE XIII.

I

2

3

4

however, to die out. The modern professional criminal avoids slang as he avoids tattooing.

§ 8. *Prison Inscriptions.*

Whenever the average human being is secluded for any considerable length of time from his fellows, he experiences the need of embodying some literary or artistic expression of himself. This instinct seems to be deeper and more wide-spread than that which induces some people to leave their names or other sign manual—the frothiest efflorescence of vain moments—on the places they visit. There is no vanity here, and it is an instinct from which no individual, whatever his degree of culture, is exempt; it is indeed scarcely distinguishable from the instinct which leads to the production of heroic works of art. The expression must vary with the individual. I knew a room, the residence of a long succession of medical students during certain weeks of seclusion involved by hospital duty, of which the walls were covered by inscriptions, humorous or broadly witty, cleverly artistic sketches, happy lines from the classics. Each person's inscription is after his kind: Mgr. Darboy, the Archbishop of Paris, writes in the form of a cross, "O crux, mentis robur, ave;" Bill Sykes at Clerkenwell writes, "Lads, your only friend here is your brown lofe and pint of thick."

In general, it seems, the lower the order of culture the more complete and trustworthy is the inscription as an expression of individual peculiarities. "The child loves to speak to himself," as Dr. Corre remarks; "the negro, and especially the negress, think aloud; and if from restraint or distrust the criminal keeps

silent his most intimate thoughts, he feels himself compelled to fix them wherever he may find himself, on the walls of his prison, or on the books that are lent to him. It is for himself, for himself alone, that he writes what he cannot or dare not say, and these revelations are very curious for the psychologist." His desires and lusts, his aspirations, his coarse satires and imprecations, his bitter reflections, his judgments of life, are all recorded in these prison inscriptions on whitewashed walls, cell doors, margins of books, tin knives, and the bottoms of skilky cans and dinner tins. In Italy they have been studied in reference to their psychological significance with characteristic thoroughness by Lombroso; and in England Mr. Horsley and Mr. Davitt have recorded a considerable number.¹ The Italian inscriptions, on the whole, are marked by a greater preponderance of the sentimental, reflective, and imprecatory elements; the English are generally very practical and material, dealing with food questions, or giving a concise statement of the event which led to the individual's incarceration, with occasional tendency to moral aspiration and didactic exhortation. Mr. Horsley notes that comparatively few inscriptions are found on the women's side, but that these are obscene much more frequently than on the men's side. I conclude from Lombroso's very comprehensive collection that this remark also holds good of the Italian inscriptions. It should be added that every inscription is an infringement of prison regulations; it is "a vulgar question of bread and water to the hungry author,"

¹ Lombroso, "Palimsesti del Carcere," in *Archivio di Psichiatria* during 1888-89; Horsley, *Jottings from Jail*, pp. 20-23; Davitt, *Leaves from a Prison Diary*, pp. 104-115.

and the impulse which produces it must therefore be of considerable strength.

Here are a few terse English examples of exploits, probably the work of old hands, and recorded by Mr. Davitt and Mr. Horsley :—

“A burst in the City. Copped while boning the swag. 7 stretch, 1869. Roll on 1876. Cheer up, pals.”

“Little Dicky from the New Cut. 10 and a ticket. Put away by a Moll” (*i.e.*, sold by a prostitute).

“Fullied for a clock and slang” (*i.e.*, committed for trial for stealing watch and chain).

“Poor old Jim, the lob crawler, fell from Racker, and got pinched” (*i.e.*, James and Racker having gone out to commit till robberies, the former was apprehended, and the latter escaped).

“For seven long years have I served them,
And seven long years I have to stay,
For meeting a bloke in our Alley,
And taking his ticker away.”

“The judge he seven years gave me,
Transported to Van Diemen’s Land,
Far away from my friends and relations,
And the girl with the dark velvet band.”

The last writer was at Dartmoor, and introduced Van Diemen’s Land because of the exigencies of rhyme.

The delights of food inspire much verse, and dissatisfaction with its quality or quantity a large number of remarks :—

“I had for my dinner, ochone ! ochone !
One ounce of mutton and three ounce of bone !”

“Here’s luck to the pint of skilly !”

“Lord save me from starvashun !”

“ One more month then out we go,
Then for feed of hot Coco ;
Fried Bread and steak, Plenty of Beer,
Better luck than we get here.”

“ Cheer up, boys, down with sorrow,
Beef to-day, Soup to-morrow.”

“ O for a pot of beer ! ”

“ Love is a great thing,” writes an Italian philosopher, “ but hunger surpasses everything.”

“ O who can tell the panes I feel,
A poor and harmless sailor,
I miss my grog and every meal ;
Here comes the blooming jailer.”

A poet, Crutchy Quinn by name, known to Mr. Davitt, and who was himself acquainted with seven of the prisons he characterises, wrote as follows with a nail on the bottom of a dinner can :—

“ Millbank for thick shins and graft at the pump ;
Broadmoor for all laggs as go off their chump ;
Brixton for good toke and cocoa with fat ;
Dartmoor for bad grub but plenty of chat ;
Portsmouth, a blooming bad place for hard work ;
Chatham on Sunday gives four ounce of pork ;
Portland is worst of the lot for to joke in—
For fetching a lagging there’s no place like Woking.”

Quinn, in spite of his name, was not an Irishman, but two-thirds of the prison-poets, Mr. Davitt found, are Irish.

From the more miscellaneous group of sentimental, religious, moral, didactic, and reflective sayings may be quoted the following :—

“ The heart may breake, yet may brokenly live on.”

Mr. Davitt found a book at Newgate with “ Good-

bye, Lucy dear," written throughout it, and at the end—

“ Good-bye, Lucy dear,
I'm parted from you for seven long year.
ALF. JONES.”

A poet of a more caustic school had added beneath this—

“ If Lucy dear is like most gals,
She'll give few sighs or moans,
But soon will find among your pals
Another Alfred Jones.”

Remarks against women are by no means rare, as the following given by Lombroso—

“ La donna è un essere inutile ; io la stima soltanto quando
la ch . . .
NAPOLEONE I. EMPEREUR.”

And another Italian writes—

“ He is a poor deluded fool who believes in the love and honour of women.”

But the women reciprocate this sentiment, and in an Italian illustrated magazine a woman writes—

“ In this stormy sea which is called the world I have only found fleeting pleasures and cruel disillusion. And if I felt any happiness I had to pay for it with bitter tears. Never believe in the love of men : for them love is a pastime. When you have sacrificed for them honour, family, religion, interest, youth, they will turn their shoulders to you with contempt, in search of other loves. That is the kind of thing that man is.”

But the same woman writes passionately to her accomplice in murder, robbery, and adultery—

“ Questo foglio dal cuor ti mando,
L' ho scritto ieri sera lacrimando,
L' ho scritto avante cena,
Senza inchiostro e senza penna.

La punta del mio cuore era la penna,
 Il sangue delle mie vene era l' inchiostro,
 Se penna e calamaio poco ti costa,
 Se merito pietà ti prego d' una riposta.
 Addio, Addio,
 Addio, mio bene,
 Addio, mio amore,
 Tu sei il mio cuore,
 Per ti morirò.

1886."

Another woman's inscription is a pathetic recollection of an old ballad—

"I wish to God my baby was born,
 And smiling on its father's knee,
 And I, poor girl, lay in my grave,
 The green grass growing over me."

Beneath a design of a funeral monument a thief wrote this inscription (translated from Lombroso)—

"Here lies the body of poor Tulac Who, tired of stealing in this world, Goes to steal in another. His happy relatives have erected this memorial."

Very significant of mental vacuity in solitude are some inscriptions given by Mr. Horsley :—

"21,000 times have I walked round this cell in a week."

"3330 bricks in this cell."

"131 black tiles, 150 red tiles in this cell."

Good resolutions and moral exhortations are not uncommon :—

"It's no good crying, you have got to do it, then after you have done it don't do it any more ; I wont."

"Cheer up, girls ; it's no use to fret."

"Brethren in adversity, turn your heart to God and be happy."

“Good-bye all. Give up drink.”

“½ pint whisky brought me here — took the pledge for 2 years—renewable for ever.”

“The Lord saith, It is good to be here.”

“The Almighty for master, the devil for servant. Amen.”

“Fear God and scorn the Devil, then you will not be here again.”

The Italian inscriptions supply a more dubious exhortation :—

“O thieves! our profession is ruined by those rascally judges. But courage! Forward!”

This brief account would not be complete if I neglected to give some specimens of the imprecations, crude erotic aspirations, and perverse instincts which occupy some considerable space in Lombroso's collection. I will leave them untranslated :—

“Abbasso il direttore delle carcere e il capo-guardia, che sono due avanzi di galera. A morte le gafe [warders] e tutti le spie, a morte il capo-guardiano delle carcere, a morte l'Arca che sono la rovina di tanti giovani.”

“Mia adorata stella, quando potrò ch . . . ?”

“Pensare che in questo stesso luogo vi sono tante bighe [women] che hanno volontà di farsi infilzare e non possono e tanti p . . . che infilzerebbero un cane altro che una f . . . e non possono farlo.”

“Pare impossibile. Che si possa stare tanto tempo senza piantare il membro in una f . . . od in un culo. Eppure sono già 22 mesi che me lo meno due volte ogni quattro giorno e non sono ancora tistico.”

The last I will give was written by a woman in a religious book, and is translated by Lombroso from the Piedmontese dialect—

“La Marietta del taglio salute le sue amiche che fanno la

porca come lei, e saluta tutti i giovanotti che l'hanno ch . . . Menatevi una volta l'uccello al mio gusto, che io me la meno al vostro, e quando sarò libera venite a trovarmi che ce l'ho sempra calda e stretta tanto che volete. Alleгри!"

§ 9. *Criminal Literature and Art.*

M. Joly has made some interesting investigations (which he has recorded recently in the *Archives de l'Anthropologie Criminelle*) concerning the favourite reading of French prisoners. He found that such criminals do not read either Molière or Voltaire. Nor do they care for the psychological novel of character and analysis; they have no taste and no capacity for introspection; they prefer the *rococo* style, and an old romance in five or six volumes called *Épreuves du Sentiment* is a great favourite at La Grande Roquette. This is what we should expect from that sentimentalism which has already been noted. But among the favourite prison novelists Alexandre Dumas is *facile princeps*. We must not seek to explain this by finding in Dumas a response to specific criminal instincts. In this matter prisoners are at one with a very large body of non-prisoners, with George Sand, Tolstoï, and Rossetti at their head. It is the universally human quality in the prolific novelist, the anodyne of his entrancing and unflagging interest, the satisfaction which he offers to the love of adventure, by which Dumas fetters the criminal as well as the man of genius. The female prisoners at Saint Lazare, unlike the male prisoners, are constantly asking for Voltaire's books, which, however, the sisters are not able to supply. They are very fond of Henri Conscience, the Flemish Walter Scott, a

preference which is also by no means shared by the men, and they delight in all sorts of innocent and sentimental love-stories, although their marginal annotations to these do not always admit of reproduction.

If the favourite reading of those whose criminal career is decided is of so innocent a character, the same cannot always be said of the literature read by the immature. There is ample and unquestionable evidence to show that a low-class literature in which the criminal is glorified, as well as the minute knowledge of criminal arts disseminated by newspapers, have a very distinct influence in the production of young criminals.¹ Tropmann, a notorious French murderer, was influenced by novels. The famous criminal Lacenaire, who glorified himself and was glorified by others, has had an influence in the production of crime down to our own day. After every celebrated or startling crime, some weak-minded and impressionable persons go and commit the like, or give themselves up to the police under the impression that they have been guilty of the crime. It is youths and children who are especially prone to the imitation of criminal events from books or from real life. After the murders associated with the name of Jack the Ripper several murders by young children took place throughout the country.

It is not, usually, until he is in prison that the criminal tries to find literary expression for himself. This expression takes chiefly the form of verse, nearly always of a rude character, often affected or boastful,

¹ See, for instance, Dr. Aubrey's recent work, *La Contagion du Meurtre*, pp. 68-91, and some remarks by Mr. Davitt, *Prison Diary*, p. 85.

but not seldom vigorous or pathetic. A criminal has been known to declaim from the scaffold a poem on his own death; another asked and obtained permission to present his defence in verse. It would be difficult to give stronger proof of a predilection for verse forms.

A song, of which this is a translation, was heard in a Russian prison:—

“In this spot where infamy has placed for ever her dwelling, two angels pant, having in their hands a cross. . . . But at night, with measured steps, slowly, slowly, watching the prison, the sentinels turn. Within these walls are sadness and terror. Without are life, gold, and liberty. . . . But the black echo of that slow, slow step warns me: Thou shalt stay, stay.” This was written and most sweetly sung by a man who had cruelly murdered his wife.

The poetic productions of English criminals, however numerous, are of no great interest; they seem to appear at their best in the inscriptions already given. Mr. Davitt has a chapter on “Prison ‘Poets,’” but what he has to say of them is not encouraging, although he tells us that Portsmouth has the reputation of being “a community of imprisoned songsters,” and such a specimen as the following does not produce much desire for more—

“’Twas one fine morning I left Wakefield Jail,
Myself and comrades we did cry our fill,” etc.

One could write as well as that without being a convict.

Lamb and other good judges thought well of Thomas Wainwright, the forger and poisoner. As a man of letters he enjoyed considerable reputation as

a critic, and was certainly a man of refined artistic tastes.¹ It is to-day not easy to detect in him many signs of critical insight or fine literary ability. He was one of the writers of that "Dandy and Silver Fork School" of whom Hazlitt says:—"Macassar Oil, Eau de Cologne, Hock and Seltzer Water, Atta of Roses, Pomade Divine, glance through the page in inexhaustible confusion, and make your head giddy." His writing is but the vain froth of a nauseous life. The following extract is fairly characteristic:—"It appears to us that the time requireth not the hand of genius to give it a gusto for the tastes and feelings of what are called the lower orders,—rather the reverse! We want more macaroni and champagne, less boxing and bull beef. Now, Mr. Drama [Hazlitt] of the *London* seems determined to show his readers that his stomach is hearty—that he can relish bread and cheese and porter, which certainly are very fine things in the country, and—when we can get nothing else—and so far, all this is very well. But surely, in the centre of fashion, we might be now and then indulged with more elegant fare,—something that would suit better with the diamond rings on our fingers, the antique cameos in our breast-pins, our cambric pocket-handkerchief breathing forth Attargul, our pale lemon-coloured kid gloves! some chicken fricaseed white, for instance; a bottle of Hock or Moselle, and a glass of Maraschino." These things and the like of these were for Wainewright the only things in the world

¹ *Essays and Criticisms*. By J. G. Wainewright. Now first collected, with some account of the author, by W. C. Hazlitt. London: Reeves & Turner, 1830.

that seemed desirable, and his passion for them lay at the root of his crimes.

In Italy we meet with a genuine, and often traditional body of criminal songs which is of great interest. It is found in chief perfection in Italy and the large neighbouring islands, Sardinia, Corsica, and especially Sicily, where the civilisation is more primitive, and the level of criminality much higher. In the *Canti Siculi* of the able and enthusiastic folklorist, Pitré, there are twenty-seven which he describes as Prison Songs; with others rather similar in the same collection, the total amounts to forty-one (4 per cent. of the whole), mostly declarations of vengeance, laments for lost liberty, imprecations against judges and police. Some are in praise of prison, as the following:—

“Carcere, vita mia, cara, felice !
 Lo starmi entro di te come mi piace !
 Se spiechi il capo a quel che mal ne dice,
 O pensa che far perdere la pace.
 Qua sol travi i fratelli e qua gli amici,” etc.

There are also fine notes of despair, and sweet recollections of the absent mother or sweetheart. Sardinia, a land of brigandism and assassination, has produced numerous criminal songs of interest. “The Corsican songs collected by Tommaseo,” remarks Lombroso, “might be said to be almost all the creation of brigands. Nearly all breathe vengeance for a slain friend, or hatred against an enemy, and admiration for murder.” A ferocious Corsican brigand, named Peverone, who used to leave his mark behind by covering his victim with capsicums (peperoni), wrote verses which, says Lombroso, “would not be unworthy of Laura’s sweet singer.”

In such a case as that of Corsica, we must, however, be very cautious how we use the word "criminal." In that land barbarous conceptions still rule; a child is brought up from its earliest days in an atmosphere of robbery and bloodshed; what in a more civilised country we call "crime" is there to a large extent the normal social state. It is in Corsica that a parish may vote a pension to a brigand (the *commune* of Ciammance, for example, in 1886); that more than half the persons liable to serve as jurymen in an *arrondissement* (4400 out of 8000 in one instance) may themselves have appeared behind the bar; and where a mayor (*arrondissement* of Sartène) may issue a proclamation in the following terms:—"Art. I. The carrying of arms is formally forbidden on the territory of the commune of Levie. Art. II. Exception is made in the case of persons notoriously in a state of enmity."

As a specimen of French criminal literature I will give a poem by Lebiez, the young murderer spoken of in Chapter I.; it is addressed to a young girl's skull:—

"De quelque belle enfant restes froids et sans vie,
 Beau crâne apprêté par mes mains,
 Dont j'ai sali les os et la surface blanchie
 D'un tas de noms grecs et latins,
 Compagnon triste et froid de mes heures d'étude,
 Toi que je viens de rejeter
 Dans un coin, ah ! reviens tromper ma solitude,
 Réponds à ma curiosité.
 Dis-moi combien de fois ta bouche s'est offerte
 Aux doux baisers de ton amant ;
 Dis-moi quels jolis mots de ta bouche entr' ouverte
 Dans des heurs d'égarement . . .
 Insensé ! . . . Tu ne peux répondre, pauvre fille ;

Ta bouche est close maintenant,
 Et la mort, en passant, de sa triste faucille
 A brisé tes charmes naissants.
 Triste leçon pour nous, qui croyons que la vie
 Peut durer pendant de longs jours !
 Et jeunesse, et bonheur, et beauté qu'on envie,
 Tout passe ainsi que les amours !
 Aussi, quand, vers le soir, âpre et dur à la tâche,
 Je travaille silencieux,
 Mon esprit suit le monde et, tout inquiet, s'attache
 A des pensers plus sérieux,
 Je rêve au temps qui passe . . . alors je te regarde,
 Et, songeant aux coups de destin,
 Sur ton front nu je crois lire en tremblant : ' Prends
 garde,
 Mortel, ton tour viendra demain.' ”

When his papers were returned to him by the police, Lebiez wrote on the margin of this : “ Poor verses ! but, bad as they are, they are a faithful picture of the state of my mind in moments of solitude. In the world I am amiable and gay. I am taken for a wild fellow, who mocks at everything ; but if they knew my character thoroughly, if they were aware that when I laugh and joke I have just come out of a solitude of despair and tears ! If they knew that there are sobs at the bottom of my heart when smiles cover my lips, they would not say that I mock at everything. My gaiety is only a mask which hides the anguish which has for so long torn my heart.”

There are one or two examples of newspapers written and conducted by prisoners. The Abbé Crozes, in his *Souvenirs de la Petite et de la Grande Roquette*, gives us specimens and a facsimile page of one of these, the *Tam-Tam*, which, however, only lasted a very short time. Here are a couple of fragments from this remarkable journal :—

FABLE EXPRESS.

“ Un grand tambour-major, pressé par la famine,
 Dinait d'une maigre sardine
 Et s'en régalaît sur ma foi !

Morale.—On a souvent besoin d'un plus petit que soi.”

ECHOS ET BRUITS.

“ Nons apprenons avec plaisir à nos lecteurs le projet formé par la Société Agricole de France, de se servir des oreilles de Transparent, pour se livrer à des essais sur la culture des champignons.

L'abondance et la qualité du fumier que contiennent ces vastes esgourdes, leur grandeur, leur système d'aération promettent aux amateurs de cèpes les résultats les plus satisfaisants.”

Very different from the *Tam-Tam* is the *Summary*, a newspaper published at the Elmira Reformatory, New York. This newspaper, largely written by prisoners and, at one time at all events, edited by a prisoner, contains, besides original contributions and the news of the Reformatory, a summary of general news ; and by its tone and its method of selection, it compares favourably, as it has been said, with many newspapers published outside prison-walls. The following contribution to the *Summary* is from “ a bright young burglar,” about eighteen years old, and is entitled “ God and the Robin ” ; it has an allegorical and personal significance :—

“ Early in the morning, long before the lazy cock crows, you may hear the robin singing his welcome to the sun. He has been watching through the darkness for the first rays of coming day, and as they appear he pours forth the melody as an expression of his joy. All is quiet till his music rends the air, and as you listen you are inspired with thoughts of Him who made the robin and you. Perhaps the sweet song is a prayer of thanks to God for sheltering him from the dangers of the

night. Do they know of God? Who can tell? Perhaps He is the cause of what we in our ignorance call instinct. Once as I listened to their music I fell asleep, and dreamt of a house near the sea. It had a lawn in front, on which was a robin hopping in search of food for her young. But as she hopped about the sky seemed to grow darker. I knew that a storm was approaching, and when it came I saw the robin cling to the tree for shelter. But the wind was fierce, and it tore her from the branch, and in spite of all her efforts it bore her away out over the ocean, farther and farther from the land, till at last, when its energy was spent, its fury gone, it left her on the ocean with no land in sight to guide her to her home; and as she flew she thought of her little ones at home, and of her mate. She thought she was flying to them, but every little effort was taking her farther away, though she knew it not. When at last she began to tire, she looked at the restless waters, but they offered her no relief; and in her frightened cry I seemed to hear her say, 'O where shall I rest my weary wing?' But in the murmuring of the ocean she heard no reply, so she could but fly on till darkness came, when, utterly exhausted, she fell upon the cruel waves and died. And He who made her will receive her when the course of life is past. Cannot the little robin find in that house of many mansions a place to rest her weary wing? Is heaven made for man alone? Are not these little creatures who never offend God, but worship Him with the purity and happiness of their little hearts, entitled to the joys of hereafter? Who can doubt it?"

The following interesting dialogue in the Socratic manner—"An Imaginary Conversation between two Members of the Casuistry Class"—is also by a very young criminal, who was also something of a poet:—

"Did you not agree last Sunday with the member of our class who said that life in prison is a state of slavery?"

No, I did not. In fact, I am astonished at your question. I rather think it is *not* a state of slavery.

That is a very curious belief.

It may appear to be; but I think it can be proved to be

logical. You say that imprisonment for wrong-doing is slavery ; but what is slavery ?

I should define it to be the involuntary subjection of one person to the will of another.

But cannot a person be a slave to passion and to other qualities of mind as well as to persons ?

Yes.

Then your definition is obviously incorrect. I would define slavery as a state in which one's actions are regulated by some power over which he has no control. Would you agree with me ?

Well, I think I would.

Very well. Having agreed upon a definition of slavery, we will discuss whether life in prison is slavery. Now, let me ask, why are men sent to prison ?

Usually for violating the law.

Well, do you believe that men steal, for instance, voluntarily ?

Undoubtedly.

Your tone is rather confident, so I daresay you can tell me *why* men steal ?

In order to get certain articles that will enable them to live more comfortably, or which they desire to have.

That is, you mean that they have certain feelings—such as laziness, love of gain, etc.—which they wish to gratify ?

Well, yes.

But if a man had not these feelings he would not steal ?

I think not.

Then these feelings regulate his conduct in stealing ?

It seems so.

But you agreed that he whose conduct is regulated by some power other than his own free will is a slave.

Well, I am afraid you have caught me again.

But do you admit it ?

I do.

Then he who prevents this man from stealing is emancipating him, not enslaving him ?

I see you are right.

Then one who is in prison for wrong-doing is a free man, not a slave ?

Yes. But suppose that the man has been sent to prison unjustly ; what then ?

To answer your question, I should have to know what your conception of true freedom is. True freedom is, as it appears to me, the triumphing of the spirit or better part of man over the flesh or weaker part; that is, acting according to one's highest conception of what is right. Do you agree with me?

I do.

Then do you not think that the truly righteous man, be he in prison or out, is free? Do you not see that a man who does right, even though he lose fortune or life by doing so, is freer than the one who allows his conduct to be regulated by fear, malice, or other passions? Remember that a man may be free in a dungeon and bound down with chains, and that he may be an abject slave and be clothed in purple."

The *Summary* perhaps does something to encourage priggishness, but priggishness, it need scarcely be said, indicates a far higher moral level than the vacuous brutality which lies behind so large a proportion of prison inscriptions.

So far we have been dealing with writers who are first and above all criminals. It is necessary to mention a few artists and men of letters who, while distinctly criminals, are not primarily criminals. Villon is generally named at the head of these, and with good reason, as he has himself supplied the evidence by which he must be counted a criminal. But Villon was a poet, and a great poet; his crimes never degraded his art. It is worth noting that almost the only passage¹ which Lombroso quotes to prove such degradation is, on independent grounds

¹ "Je suis Francoys, dont ce me poise,
Nommé Corbucil en mon surnom,
Natif d'Auvers emprés Pontoise,
Et du commun nommé Villon.
Or d'une corde d'une toise
Sauroit mon col que mon cul poise,
Se ne fut un joli appel.
Le jeu ne me sembloit point bel."

and apparently with good reason, regarded by Jannet, Villon's editor, as spurious.

Cellini, as self-revealed in his wonderful autobiography, bears more distinct marks than Villon of instinctive criminality. Crime is, however, rare among great sculptors; on the other hand it has been, as Lombroso points out, very common among painters; numerous are the examples of murder, cruelty, theft, sexual offences, among distinguished painters; alcoholism is also very common.

Casanova, a man of various and extraordinary abilities, has in his *Memoirs*, of which the strict historical accuracy is now generally accepted, produced one of the most valuable and interesting records of the eighteenth century, and at the same time a most complete and complaisant history of his own criminal offences. It is difficult to say whether in him the criminal or the man of genius is most prominent.

A living poet of some eminence, M. Paul Verlaine, furnishes an interesting example of the man of genius who is also distinctly a criminal. M. Verlaine is the chief of the so-called "Decadant" school. The precise rank that he will ultimately take as a poet is not yet clear; while on the one hand he has been unduly neglected, on the other he has been unduly extolled. At his best he excels in delicate passages of vague and mystic reverie, in sudden lines of poignant emotion. His style, a curious mixture of simplicity and obscurity, is studded with words borrowed from the criminal's argot. His latest volume¹ contains poems which well show his curious power of expressing the most delicate *nuances* of sentiment side by side with

¹ *Parallèlement*, 1889.

the crudest, most unabashed impulses of cynical depravity, self-revelations of sexual perversity, which might have earned for the book a title in a line of its own, "L'embarquement pour Sodome et Gomorrhe." I do not propose to quote any of these but from a short but interesting series written during an imprisonment of several years at Brussels. Here is a poem describing the life of the prisoner :—

“ La cour se fleurit de souci
 Comme le front
 De tous ceux-ci
 Qui vont en rond
 En flageolant sur leur fémur
 Debilité
 Le long du mur
 Fou de clartè.

Tournez, Samsons sans Dalila,
 Sans Philistin,
 Tournez bien la
 Meule au destin.
 Vaincu risible de la loi,
 Mouds tour à tour
 Ton cœur, ta foi
 Et ton amour !

Ils vont ! et leurs pauvres souliers
 Font un bruit sec,
 Humiliés,
 La pipe au bec.
 Pas un mot ou bien le cachot,
 Pas un soupir.
 Il fait si chand
 Qu'on croit mourir.

J'en suis de ce cirque effaré,
 Soumis d'ailleurs
 Et préparé
 A tous malheurs.

Et pourquoi si j'ai contristé
 Ton vœu tetu,
 Société,
 Me choierais tu ?

Allons, frères, bons vieux voleurs,
 Doux vagabonds,
 Filons en fleur,
 Mes chers, mes bons,
 Fumons philosophiquement,
 Promenons-nous
 Paisiblement :
 Rien faire est doux."

I do not know any more interesting document in criminal literature than one poem, *Læti et Errabundi*, contained in this volume. Fully to understand the significance of this remarkable poem, it is necessary to state that Verlaine's imprisonment was due to an attempt on the life of his comrade in sexual perversity, himself also a poet of some note. The latter left Europe, and it is not now known whether he is alive or dead. To him *Læti et Errabundi* is addressed.

I quote the concluding lines :—

" On vous dit mort, vous. Que le Diable
 Emporte avec qui la colporte
 La nouvelle irrémédiable
 Qui vient ainsi battre ma porte !

Je n'y veux rien croire. Mort, vous,
 Toi, dieu parmi les demi-dieux !
 Ceux qui le disent sont des fous.
 Mort, mon grand péché radieux.

Tout ce passé brûlant encore
 Dans mes veines et ma cervelle
 Et qui rayonne et qui fulgore
 Sur ma ferveur toujours nouvelle !

Mort tout ce triomphe inouï
 Retentissant sans frein ni fin
 Sur l'air jamais évanoui
 Que bat mon cœur qui fut divin !

Quoi le miraculeux poème
 Et la toute-philosophie,
 Et ma patrie et ma bohème
 Morts ? Allons donc ! tu vis ma vie !”

Verlaine's very remarkable head, though large, is the head of a criminal much more than of a man of genius, with its heavy jaw, projecting orbital arches and acrocephalic occiput, with central ridge—the head which the acute Lauvergne called Satanic, and which, in its extreme form, he believed to announce the monstrous alliance of the most eminent faculty of man, genius, with the most pronounced tendencies to crime. M. Verlaine has long been a victim to chronic alcoholism, and the author of the *Fêtes Galantes* and of some of the most tender lines written in our day is now most often found within the wards of Parisian hospitals.

“ Je compte parmi les maladroits.

J'ai perdu ma vie et je sais bien
 Que tout blâme sur moi s'en va fondre :
 A cela je ne puis que répondre
 Qui je suis vraiment né Saturnien.”

A few words may be added concerning criminal art as shown in design. Lombroso reproduces numerous drawings, etc., made in prison. They are generally very rough and slight, never beautiful, but frequently expressive, rendering character, now and then, in face and attitude, with ease and felicity.

Scenes of murder or robbery, law courts, men hanging from the gallows, women, mostly nude, with huge or pendent breasts, men or women in extravagantly perverse sexual attitudes—these are the visions which come to the criminal in prison, and to which he seeks, by such means as may be within his reach, to give artistic expression. Sexual imagery, not beautiful but gross and ugly, undoubtedly has the chief part in these designs ; but it is scarcely necessary to point out that the artificial conditions under which the prisoner lives is largely responsible for this characteristic of his art, although not for its generally deliberate ugliness.

Dr. Laurent, in his work, *Les Habités des Prisons*, has treated this matter more completely than any other writer known to me, and has reproduced some very characteristic and instructive examples of this art, although he has not dared to reproduce the more extravagant designs which he describes. What has chiefly impressed him among the large number of drawings by prisoners which have passed through his hands is the absence of any elevated thought, of any noble sentiment. In the erotic designs there is occasionally an imaginative audacity, but love is always regarded as a purely physiological act, and everywhere else the design is pathetically commonplace ; it is naturalistic in the lowest sense of the word, adding nothing, suppressing nothing ; and these drawings have therefore a remarkable family likeness. If there is any great artist of whom they ever remind us it is Ostade, with his perpetual research of the mean and degraded, physically and morally, in humanity. Dr. Laurent draws special attention to a design which appears to represent

some winged angel of hope; there is something in the bold, predaceous face of this vulgar fairy, in the coarse firm attitude, so suggestive of the things that alone have left a firm impress on the artist's mind, that is very pathetic. In one of those designs only is it possible to catch a glimpse of the ideal; it is the figure of a woman by a clerk of some education, and possessed of personal qualities which brought him into relation with women of a somewhat superior type. The face in this drawing has a tender and melancholy air; even here, however, the body is drawn in too crude and realistic a manner. Where these artists succeed best is in the photographic delineation of commonplace or unpleasant human types, such as may be seen in large cities, especially after nightfall. There is usually something hard, cynical, degraded in these types, in their whole bodies as well as their faces; they remind us of what was said of portraits executed by Wainewright, that he had contrived to put the expression of his own wickedness into them.

These artists also do not succeed in caricature, and rarely attempt it. To be successful here involves some judgment, delicacy, and insight, and these the prison artists do not appear to possess.

In the nude, as I have already mentioned, prison artists take great delight, and they even achieve a certain amount of success. There is a certain Hogarthian vigour and ease with which the faces and forms of these coarse, low-browed, animal, energetic women, with their large pendent breasts, are brought before us. The only prison sketch I have seen showing anything more than a crude sense of beauty, any real appeal to the imagination, or distinct science of

form and composition, is a group of nude women in extravagant attitudes, which Dr. Laurent reproduces ; he says nothing of the artist, except that he was probably a Saint Anthony by necessity, who, in this scene as of a Sabbath of witches, has given expression to the dreams that tormented him. It is a genuine piece of fantastic art, and seems to recall certain designs of the Belgian artist, Félicien Rops. This design escapes to some extent—and to some extent only—from the judgment which Dr. Laurent pronounces on the treatment of sex by criminals:—“Sex is not for them a sacred and mysterious thing, a mystic rose hidden beneath the obscure vault of the body, like a strange and precious talisman enclosed in a tabernacle. For them it is a thing of ugliness, which they drag into the light of day and laugh at.”

§ 10. *Criminal Philosophy.*

One of the most interesting and instructive departments of criminal literature is that dealing with the criminal's mental attitude towards crime. In considering the problems of crime, and the way to deal with them, it is of no little importance to have a clear conception of the social justification for crime from the criminal's point of view. Not only is he free from remorse ; he either denies his crime or justifies it as a duty, at all events as a trifle. He has a practical and empirical way of his own of regarding the matter, as Dostoieffsky remarks, and excuses these accidents by his destiny, by fate. “What contributes to justify the criminal in his own eyes is that he is quite certain that the public opinion of the class in which he was

born and lives will acquit him ; he is sure that he will not be judged definitely lost unless his crime is against one of his own class, his brothers. He is secure on that side, and with so good a conscience he will never lose his moral assurance, which is the main thing. He feels himself on solid ground, and by no means hates the knout which is administered to him. He looks upon it as inevitable, and consoles himself by thinking that he is not the first nor the last to receive it. Does the soldier hate the Turk who sabres him? By no means !”

To be caught is the foolish part of the business. “You are a lot of fools to get in here, myself included,” is one of the prison inscriptions noted by Mr. Horsley. “Had God wished me to be different, He would have made me different,” said Goethe. In the same spirit is the philosophy of crime set forth by a man known to Lombroso : “If God has given to us the instinct to steal, He has given to others the instinct to imprison us ; the world is an amusing theatre !” It is rare, however, for the criminal to take so lofty a standpoint as this ; more usually he bases the justification for his own existence on the vices of respectable society—“the ignorance and cupidity of the public,” as one prisoner expressed it—that he is shrewd enough to perceive ; “it is a game of rogue catch rogue,” a convict told Mr. Davitt. A youthful French brigand in the days of Charles IX., as he impassively ascended the scaffold, declared that he was innocent, because he had never robbed poor people but only princes and lords, the greatest robbers in the world. “We are poor rogues, and so hanged, while others, no less guilty in another way, escape,” pleaded Captain Bartholomew Roberts’s fifty-two

pirates, executed at the beginning of the eighteenth century. "Law for the rich but none for the poor," is a modern English prison inscription which would probably have expressed its writer's meaning better if it had been transposed. *Quels gredins les honnêtes gens!*

An Italian criminal wrote in a book of "Moral Maxims" by Tommaseo: "When you have read this book become a priest or a master; if not it will be of no use to you. There are fine maxims in this book, but maxims are no good in this world, where the god of gold reigns alone. He who has money is brave and virtuous; all the maxims of Tommaseo are of no use to him who has none; he will still be treated with contempt." A Milanese thief said to Lombroso: "I do not rob; I merely take from the rich their superfluities; and, besides, do not advocates and merchants rob? Why accuse me rather than them?" "Knowing," wrote the murderer Raynal, "that three-fourths of the social virtues are cowardly vices, I thought that an open assault on a rich man would be less ignoble than the cautious combinations of fraud." J. G. Wainewright, when in prison, said to a visitor: "Sir, you city men enter upon your speculations and take the chances of them. Some of your speculations succeed, and some fail. Mine happen to have failed." An Italian thief, one Rosati, said: "I am proud of my deeds; I have never taken small sums; to attack such large sums I consider a speculation rather than a theft." Another Italian thief said that there were two kinds of justice in the world: natural justice, that which he himself practised when he shared the proceeds of his thefts with the poor; and artificial justice, that which is protected by social laws. The criminal

is firmly convinced that his imprisonment is a sign that the country is going to the dogs. A prison inscription quoted by Lombroso runs: "I am imprisoned for stealing half-a-dozen eggs; Ministers who rob millions every day are honoured. Poor Italy!" "We are necessary," a brigand chief said proudly to his judges; "God has sent us on the earth to punish the avaricious and the rich. We are a kind of divine scourge. And for the rest, without us what would you judges do?"

This conviction of the criminality of the honest is engrained in the criminal mind, and one meets it at every turn. "Who doesn't deserve the galleys?" was a remark often heard by Dr. Lauvergne at the convict establishment at Toulon, and the same idea was cynically expressed by Laeenaire:—

"Buvons à la sagesse,
A la vertu qui soutient !
Tu peux sans crainte d'ivresse,
Boire à tous les gens de bien."

Most people must have observed, in talking with persons of vicious instincts, the genuine disgust which these so often feel for the slightly different vices of others and their indifference to their own. So the man in prison feels indulgence for his own offence and contempt for his more cautious brother outside who continues to retain the respect of society, feelings which the latter heartily reciprocates. Every individual, whatever his position, feels the need of a certain amount of *amour propre*. "I may be a thief, but, thank God, I am a respectable man."

Among the criminal songs still found in Sardinia there is one (quoted by Lombroso from Bouillier's

Les Dialectes et les Chants de la Sardaigne) that may be quoted here. "Tell me," asks Achea of the priest, "if I have nothing to eat, and if I find wherewith to appease my hunger, may I take the goods of another?" "Believe me, if you have nothing to eat, and you meet with something, you would be a fool not to take it." "That is a good counsel, but here is a difficulty: what I have taken in this way, ought I to return it?" "No. The observance of the law would subject you to a fast too severe; you are a great fool if you do not understand that in the face of necessity all things belong to all." That is the morality of a lawless and primitive society, but it has points of contact with some of the latest and highest developments of social morality. Tolstoï would justify it; as, to a certain extent, a respected archbishop has justified it.

"The laws of society," remarked an educated convict to Mr. Davitt, "are framed for the purpose of securing the wealth of the world to power and calculation, thereby depriving the larger portion of mankind of its rights and chances. Why should they punish me for taking by somewhat similar means from those who have taken more than they had a right to? My dear sir," said he, "I deny your contention that there is any such thing as honesty in the world at all." This man, who had a considerable acquaintance with literature and philosophy, maintained soberly that "thieving was an *honourable* pursuit," and that religion, law, patriotism, and bodily disease were the real and only enemies of humanity. "Religion," he would observe, "robbed the soul of its independence, while society's social laws, in restraining the desires and faculties given by Nature to men for

the purpose of gratification, declared war against the manifest spirit of the law of our being." Patriotism he termed "the idolatry of an idea, in the stupid worship of which the peace of the world, and the well-being of its inhabitants, were sacrificed by the law-makers and others who profit thereby."

Lombroso found the following note written with a piece of iron in a politico-economical work, under the chapter of "Considerations on the Co-operative spirit": "The best governed nation is that which has fewest thieves. Do you want to abolish thieves? See to it that the working man and the peasant have work to do, and are better paid for it; then they will be content, and will have nothing to say against the government; in consequence they will do their duty, and will not be forced to do evil." Another, reading a book about an official who had been removed from the administration of taxes, wrote: "I advise you all to be public thieves, and then you will be free citizens and men who are useful to society, and will be decorated with medals and crosses. This man here was a public thief; but I am only a private robber; if I had been a public one I should not have been here." Again: "Why are those who wear coarse breeches treated in one way, and those who are dressed finely and wear yellow gloves treated in another? Why are the first called thieves while the others are said to have committed undue appropriation? Have not both classes broken the commandment which says simply 'Thou shalt not steal'?" In a confession made to Gisquet, the prefect of police, a different standpoint is taken up; the criminal justifies himself, not on moral grounds, but as a man of the world: "You regret the robbery that I have

committed, and you call it a bad action ; the insignificant act for which I have been condemned is the first link in a chain which will not, I hope, finish so soon. If I were not a thief by vocation, I would be one by calculation. I have faced all the good and the evil of other occupations, and I find that this is the best. What would have become of me among honest men? A bastard, with no one to take care of me, what could I do? Become a shopman, earn at the most six hundred francs a year, and having sweated all my life, grow old and ill and finish at a hospital. Take men in the mass and you will find them all humiliated, slaves, disgraced ; it is never talent and honesty that are recompensed ; vice prospers more often than virtue.

“ In our profession we depend on nobody ; we enjoy the fruits of our experience and ability. I know well that we may end in prison ; but out of the 18,000 thieves in Paris not one-tenth are in prison, so that we enjoy nine years of freedom against one of prison. Besides, where is the working man who is not sometimes without work? For the rest, the working man has to pledge his things at the pawnshop, while we, when we are free, want for nothing, and lead a life of constant feasting and pleasure.

“ The fear of being arrested, and the pretended remorse that people talk of, are things to which one soon gets accustomed, and which finish by giving a pleasurable emotion.

“ And then, if we are arrested, we live at the expense of others, who clothe us, feed us, and warm us, all at the cost of those whom we have robbed !

“ I will say more. During our detention in prison we think out and prepare new means of success.

“If I regret anything, Mr. Prefect, it is that I am condemned to only a year. If it had been for five I should have been sent to a central prison, where I should have met some old hands, who would have taught me some new trick, and I should have returned to Paris clever enough to live without working.

“They talk of thieves as of persons always in misery, and who always finish their lives in prison; but they think of those whom they have seen in their apparent state when arrested. They do not consider that many have secret resources, and that most of them are clever enough to get on without ever having anything to do with justice.” This man, it is clear, had aspirations and ideals which, though they found satisfaction by a different method, were much the same as those of ordinary persons. He represents the professional criminal.

“Ah! too often it is forgotten,” wrote G. Ruscovitch, a prince among forgers, the accomplished student of science, the perfect master of half-a-dozen languages, “too often it is forgotten that criminals are members of society. All these bodies, sometimes abandoned by all except the satellites charged to guard them, are not all opaque; some of them are diaphanous and transparent. The vulgar sand which you tread under foot becomes brilliant crystal when it has passed through the furnace. The dregs may become useful if you know how to employ them; to tread them under foot with indifference and without thought is to undermine the foundations of society and to fill it with volcanoes. The man who has not visited the caverns, can he know the mountain well? The lower strata, for being situated deeper and

farther from the light, are they less important than the external crust? There are deformities and diseases among us to make one shudder; but since when has horror forbidden study, and the disease driven away the physician?"

CHAPTER V.

THE RESULTS OF CRIMINAL ANTHROPOLOGY.

So far I have been summarising the chief results obtained in the investigation of the criminal up to the present date by many workers in various lands. There is not very much doubt about the results here recorded ; even when they do not agree among themselves, it is still generally possible to account for the divergency by the special character of the group to which the individuals examined belong. But when we come to consider the significance of the facts we are no longer on such safe and simple ground. There is, however, no reason here for surprise when we remember how youthful a science criminal anthropology is. Even the related science of general anthropology is still young, and much of our progress in it still lies in the unlearning of our errors, so that, as Virchow recently remarked, we know considerably less about anthropology to-day than we knew some years ago. The same is true of another related science, the study of insanity. If therefore my conclusions as to the place of the criminal in nature may seem to be somewhat cautious and tentative, it must be remembered that we are still slowly feeling our way to firm ground. Few as are the general conclusions which we may boldly assert, they are yet sufficient to throw a flood of new light on the nature of the criminal, and on his treatment and prevention.

I purpose to touch briefly on certain relationships of crime and the criminal, the consideration of which will lead us naturally to a clearer view of the criminal's position. We will glance at (*a*) the biological beginnings of crime, (*b*) crime among children, (*c*) the criminal woman as distinct from the criminal man, (*d*) the relation of crime to vice, (*e*) crime as a profession, (*f*) the relations of crime to epilepsy and insanity.

(*a*) The biological beginnings of crime have been examined by Lombroso, Lacassagne, and Ferri; and by some have even been traced as far back as the vegetable world. Thus Lombroso seems to claim those insectivorous plants studied by Darwin and others as belonging to the category of criminals. I doubt whether by any tenable definition of the criminal such a classification can be upheld, and Lombroso himself speaks with less than his usual decision. An act which is common to a whole species cannot reasonably be described as criminal. It may be unjust, even cruel, but it does not thereby necessarily become criminal. If the *Dionea Muscipula* that eats an insect is a criminal, much more must the European man who eats beef or mutton be a criminal. To be criminal the deed must be exceptional in the species, and must provoke a social reaction among the other members of that species. We can scarcely hope to find genuine vegetable criminals, even amongst the parasites.

When we are dealing with the criminality of animals, concerning which a large body of evidence has now accumulated, it is necessary to discriminate. It is well recognised by veterinary surgeons that certain horses are inclined to be undisciplined and

revengeful, and that these characteristics are associated with distinct cranial anomalies; the Arabs believe these qualities to be hereditary. There is here certainly a very close analogy to the instinctive criminal; but we are dealing with an animal greatly modified by man, and these vices are not recorded as exercised against their own species so much as against man. The case (apparently well authenticated) of the horse who pretended to be lame, to avoid going on military exercise, can scarcely be called criminal; from a horse's point of view this might be regarded as a justifiable ruse. The same may be said of the action of the dog who, finding his favourite place occupied by another dog, went outside and set up such a furious barking that the usurper came out to see what was the matter, when the rightful owner immediately pounced on his old corner. Such a ruse, even though perpetrated against one of the same species, is not anti-social. It is only when we are dealing with animals of the very highest order of intelligence that we find any manifestations that can be at all fairly described as criminal. Thus among the highly intelligent castors, the lazy castor is pitilessly chased away by his fellows, to die of hunger, alone, far from the colony. Idleness, as we know, is a very fundamental characteristic of the criminal, and the strongly marked social reaction that we see here shows that the castors have recognised this. Something of the same kind is seen among elephants. Certain elephants, called rogues, lead a solitary and unnatural life, and are lacking in the humane and gentle disposition peculiar to elephants generally. The anti-social character of these elephants is recognised by their fellows, and when the solitary elephant

PLATE XIV.

endeavours to penetrate into the family life of the ordinary elephant he is everywhere repulsed, and naturally grows still fiercer and more anti-social. Such examples as these are the nearest approaches among animals to what we call criminality.

We have to realise clearly what constitutes criminality when we turn to the lower human races. To say, as has been asserted, that among savages criminality is the rule rather than the exception, is to introduce confusion. Among many savages infanticide, parricide, theft and the rest, far from being anti-social, subserve frequently some social end, and they outrage, therefore, no social feeling. These acts are not anti-social; and many recent investigations, such as those of Élie Reclus, show that there is under the given conditions a certain reasonableness in them, although among us they have ceased to be reasonable, and have become criminal. On the other hand, many acts which the needs or traditions of a barbarous society have caused to be criminal become in a higher phase of society trivial or beneficial.

Tarde remarks, that of the ten crimes which the Hebraic law punished with stoning, nine have even ceased to be offences in our modern European societies, and the tenth (rape) has only remained a crime by entirely changing its character; it has become a crime against the person instead of a crime against property. He observes also that in a savage society one of the chief criminal types would be that of the delicate and artistic natures, sensuous and sensitive, ill adapted for pillaging neighbouring tribes. Such individuals would be chased away relentlessly, as the industrious castors chase away the lazy castor, and for the same reasons. In our societies we have

found a use for these people ; they minister to our pleasures, and we render them nothing but homage. But if we are wise we shall be very tender in arousing our indignation against the social habits of lower races, even when these involve such an act as parricide, for the distance between ourselves and even the lowest races is quite measurable. Our social code is not far removed from that of the Maori who considered that it was murder to kill the man to whom he had given hospitality, but not murder to run his spear through the stranger whom he met on his morning walk. We to-day regard it as a great crime to kill our own fathers or children ; but even the most civilised European nation—whichever that may be—regards it as rather glorious to kill the fathers and children of others in war. We are not able yet to grasp the relationship between men. In the same way, while we resent the crude thefts practised by some lower races, we are still not civilised enough to resent the more subtle thefts practised among ourselves which do not happen to conflict with the letter of any legal statute.

Criminality, therefore, cannot be attributed indiscriminately even to the lowest of races. It consists in a failure to live up to the standard recognised as binding by the community. The criminal is an individual whose organisation makes it difficult or impossible for him to live in accordance with this standard, and easy to risk the penalties of acting anti-socially. By some accident of development, by some defect of heredity or birth or training, he belongs as it were to a lower and older social state than that in which he is actually living. It thus happens that our own criminals frequently resemble in physical and

psychical characters the normal individuals of a lower race. This is that "atavism" which has been so frequently observed in criminals and so much discussed. It is the necessarily anti-social instinct of this lowlier organised individual which constitutes the crime. This accounts for the fact that, while in those districts where brigandage is opposed to popular feeling brigands are often abnormally constituted individuals, in other districts where there is no social feeling against brigandage (as in some outlying parts of Italy) the brigand may present no unusual characteristic, mental or physical. The social environment exerts no selective influence; there is nothing to thrust the abnormal person into brigandage rather than into any other occupation.

To admit, therefore, in the criminal, a certain psychical and even physical element belonging to a more primitive age is simple and perfectly reasonable. It has been observed over and over again, independently and apart from any special theory of criminality. Thus Mr. L. Owen Pike, the historian of crime in England, who is not an alienist or an anthropologist, writes:—"Of a very great number of modern habitual criminals it may be said that they have the misfortune to live in an age in which their merits are not appreciated. Had they been in the world a sufficient number of generations ago, the strongest of them might have been chiefs of a tribe. . . . With the disposition and the habits of uncivilised men which he has inherited from a remote past, the criminal has to live in a country where the majority of the inhabitants have learned new lessons of life, and where he is regarded more and more as an out-cast as he strives more and more to fulfil the yearnings

of his nature.”¹ Tarde, the cautious *juge d'instruction*, has expressed the same idea in almost the same words: “Some of them at least would have been the ornament and the moral aristocracy of a tribe of Red Indians.”² Again, Professor Prins of Brussels, only slightly varying the same formula, remarks: “The criminal of to-day is the hero of our old legends. We put in prison to-day the man who would have been the dreaded and respected chief of a clan or a tribe.” The energy with which Lombroso has advocated the atavistic element in the criminal is well known; while Colajanni, in many respects an opponent of Lombroso, remarks: “How many of Homer’s heroes would to-day be in a convict prison, or at all events despised as violent and unjust.”

That this resemblance is not merely superficial, but that some perversity or arrest of development sometimes produces an individual inapt to our civilisation, but apt to a lower civilisation which we have outgrown, and which we call criminal, we have had occasion to observe repeatedly in our brief summary of the facts of criminal anthropology. It is by no means an extraordinary fact; it is not so extraordinary as that human beings should occasionally be born with cervical auricles or supernumerary breasts—reversions to very far more ancient days. It is not easy to gather up into one statement the various real or apparent atavistic anatomical peculiarities noted among criminals. Perhaps the most general statement to be made is that criminals present a far larger proportion of anatomical abnormalities than the ordinary European population. Now

¹ *History of Crime in England*, 1876, 2nd series, p. 509.

² *La Criminalité Comparée*, 1886, p. 27.

PLATE XV.

this is precisely the characteristic of the anatomy of the lower human races: they present a far larger proportion of anatomical abnormalities than the ordinary European population. It is true that our knowledge of the anatomy of the lower human races is still incomplete, but the evidence so far as it goes is perfectly clear. It will be sufficient to quote the distinguished anatomist to whom were entrusted, the skulls collected during the most important scientific expedition of modern times. Sir William Turner, summing up the *Challenger Report* concerning these crania, writes:—"Although their number is certainly too limited to base any broad generalisation on, as to the relative frequency of occurrence of particular variations in the different races, there is obviously a larger proportion of important variations than would occur in a corresponding number of skulls of the white races."¹

Our survey of the psychical characteristics of criminals showed that they constantly reproduce the features of savage character—want of forethought, inaptitude for sustained labour, love of orgy, etc. It may not be out of place to remark that we must not attribute these to the direct influence of atavism. When an original vice of organic constitution has thrown an individual into a more primitive and remote strata of society, the influence of environment will itself simulate the effects of atavism and exag-

¹ Thus, for example, the squamoso-frontal articulation is found in less than 2 per cent. of European skulls, whilst it is found in 20 per cent. negroes (Ecker) and 16.9 per cent. Australian skulls (Virchow). Again, the speno-pterygoid foramen is found in 4.8 per cent. European skulls and in 20 per cent. American Indians, 30 per cent. Africans, 32 per cent. Asiatics, and 50 per cent. Australians. So also wormian bones are more common among the lower races.

gerate its significance. If the organic impulses of a man's constitution have led him to throw in his lot with brigands, he will not fail to live as a brigand lives—that is, as a barbarian lives. This is not atavism, though it may be the outcome of atavism, or arrest of development.¹

(b) The development of crime is precocious. Rossi ascertained at what age 46 of his 100 criminals commenced their criminal career. Of these 46, no less than 40 began before the age of twenty—*i.e.*, 1 at four years of age, 2 at seven, 6 at eight, 1 at nine, 5 at ten, 1 at eleven, 3 at twelve; and so on.² The evidence from France, from England, and from America gives very similar results. Children may even become expert professional criminals, and not in Europe alone. Thus, in India, where of recent years professional poisoning has assumed great development, and to a large extent taken the place of thuggi, “a Brahman boy at Bahraich, in May 1885, drugged a party of men travelling with the agent of the Rajah of Mohsan. Although only twelve years old, this was his fifth appearance in the dock. Another boy, a few months later, cooked some pulse for three pilgrims from Gaya; and the pilgrims were picked up shortly afterwards insensible near the railway yard at Allahabad. This boy had been charged with com-

¹ A remarkable instance of this simulated atavism is the uniformity with which (according to Lacassagne, *Archives de l'Anthropologie Criminelle*, 1886) rapes are effected by methods common among lower races, and even animals. This is not atavism, but the criminal, being a man of primitive organisation, will naturally exercise the brutality and lack of consideration which belong to a lower race.

² It may be noted that Rossi found the same precocity in the abuse of alcohol, in the form of wine—*i.e.*, 11 when children, without knowing the precise age; 2 at five years, 3 at eight, 1 at nine, 6 at ten; and so on. And sexual precocity was even more notable.

mitting a similar offence in the May previous, but had got off because the complainants, impatient of the law's delay, changed their story, and attributed their delirium to the heat of the sun." The Sonorias, again, in the north-west provinces of India, are wonderfully expert pickpockets, and they train up their children in the same paths. "A Sonoria boy of ten or twelve years, with his pretty innocent face and his clean silk clothes, is a most attractive little object of villainy. His hand slides into a pocket, and he hands over the contents to a man behind him, who in his turn makes them over to a third, and returns to watch over the urchin. If caught, the boy cries and protests his innocence, but his volubility is against him, for no honest native child can talk like a Sonoria boy."¹

It is more interesting to note that there is a certain form of criminality almost peculiar to children, a form to which the term "moral insanity" may very fairly be ascribed. This has been described by Krafft-Ebing, Mendel, Savage, and others, and is characterised by a certain eccentricity of character, a dislike of family habits, an incapacity for education, a tendency to lying, together with astuteness and extraordinary cynicism, bad sexual habits, and cruelty towards animals and companions. It shows itself between the ages of five and eleven, and is sometimes united with precocious intellectual qualities. There can be no doubt that many of these develop into instinctive criminals. Sometimes these characters only appear at puberty, together with exaggerated sexual tendencies, in children who have previously been remarkable only for their mental precocity, but

¹ E. J. Kitts, *Serious Crime in an Indian Province*, 1889, pp. 8, 85.

whose energy seems now to be thrown into a new channel.

It is a very significant fact that these characters are but an exaggeration of the characters which in a less degree mark nearly all children. The child is naturally, by his organisation, nearer to the animal, to the savage, to the criminal, than the adult. Although this has frequently been noted in a fragmentary manner, it is only of recent years that the study of childhood, a subject of the gravest importance, has been seriously taken up by Perez and others.

The child lives in the present ; the emotion or the desire of the moment is large enough to blot out for him the whole world ; he has no foresight, and is the easier given up to his instincts and passions ; our passions, as Hobbes said, bring us near to children. Children are naturally egoists ; they will commit all enormities, sometimes, to enlarge their egoistic satisfaction. They are cruel and inflict suffering on animals out of curiosity, enjoying the manifestations of pain. They are thieves for the gratification of their appetites, especially the chief, gluttony, and they are unscrupulous and often cunning liars, not hesitating to put the blame on the innocent when their misdeeds are discovered. The charm of childhood for those who are not children lies largely in these qualities of frank egotism and reckless obedience to impulse.

Most people who can recollect their own childhood—an ability which does not, however, appear to be very common—can remember how they have sometimes yielded to overmastering impulses which, although of a trivial character, were distinctly criminal. The trifling, or even normal character of such acts in childhood is too often forgotten by

those who have to deal with children. Mayhew, writing in 1862, when these childish "crimes" were still taken seriously to a terrible extent, remarks :— "On our return from Tothill Fields, we consulted with some of our friends as to the various peccadilloes of their youth, and though each we asked had grown to be a man of some little mark in the world, both for intellect and honour, they, one and all, confessed to having committed in their younger days many of the very "crimes" for which the boys at Tothill Fields were incarcerated. For ourselves, we will frankly confess, that at Westminster School, where we passed some seven years of our boyhood, such acts were daily perpetrated ; and yet if the scholars had been sent to the House of Correction, instead of Oxford or Cambridge, to complete their education, the country would now have seen many of our playmates working among the convicts in the dockyards, rather than lending dignity to the senate or honour to the bench."

In many persons the impulses of childhood persist in a more or less subdued form in adult age. The impulses are not yielded to so readily, or at all, but they are still felt. The examples have often been quoted of the distinguished alienist, Morel, who, as he narrates himself, seeing a workman leaning over one of the Seine bridges, felt so strong an impulse to throw the man into the river, that he had to rush away from the spot ; and of Humboldt's nurse, who, at the sight and touch of the new-born child's rosy flesh, felt the temptation to kill it, and was obliged to entrust it to some one else. These morbid impulses are perhaps more closely related to insanity than to criminality, but it is on a borderland that is common

to both. Both child and criminal are subject to such impulses.

In the criminal, we may often take it, there is an arrest of development. The criminal is an individual who, to some extent, remains a child his life long—a child of larger growth and with greater capacity for evil. This is part of the atavism of criminals. Mental acuteness is often observed among criminal children; it is rare among criminal adults. There is evidently arrest of development at a very early age, probably a precocious union of the cranial bones. Among savages, also, the young children are bright, but development stops at a very early age. All who have come very intimately in contact with criminals have noted their resemblance to children. Thus that profound and sympathetic observer, Dostoieffsky, in his *Recollections of the Dead-House*, summing up some of the light-hearted, easy-going characters of the convicts, says: "In one word they were children, true children, even at forty years of age." And elsewhere he quotes a saying concerning the exile: "The convict is a child; he throws himself on everything that he sees."

(c) It is interesting to consider the sexual variations of criminality. Women are everywhere less criminal than men. The proportion varies, however, greatly in different countries. In France it is usually about 4 to 1; in the United States it is about 12 to 1; in Italy and Spain the proportion of women is very small. In Great Britain, on the other hand, the proportion of criminal women is, except during the last year or two (owing probably to changes in police regulations), extremely large, especially for the greater crimes. There has indeed been on

the whole a steady increase in the proportion of women criminals in England; in 1834 they were less than 1 in 5; of recent years they have been more than 1 in 4. The greater tendency to recidivism in women has everywhere been noted, and is extremely well marked in England, where it is rapidly increasing, and is associated, it seems, with growing habits of alcoholism. Of incorrigible recidivists a very large proportion in Great Britain are women; and 40 per cent. of the women committed to prison during 1888 had been previously committed more than ten times.¹ Even among the juvenile offenders discharged from reformatory and industrial schools as incorrigible, it appears that the proportion of girls is double that of boys.

While men criminals are everywhere in a more or less marked majority, there are certain crimes which both sexes commit about equally, and these are usually the most serious. Thus, as Quetelet remarked, nearly as many women are poisoners as men, and of parricides 50 per cent. are women. The crimes of women are essentially domestic, against fathers and husbands and children. A very large proportion are,

¹ Mr. Horsley has compiled from the Judicial Statistics the following table of individuals committed more than ten times, with proportion to total of recommittals:—

Year.	Male.	Female.	Male.	Female.
1879	3706	5673	8.3	22.4
1880	3691	5800	8.3	23.6
1881	3618	6773	8.2	27.3
1882	4148	7496	8.8	27.4
1883	4391	8946	8.9	29.3
1884	4734	9316	9.4	30.2
1885	5188	9451	10.0	31.6
1886	5074	8981	10.1	33.2
1887	5686	9764	11.1	34.2

directly or indirectly, of a sexual character. It is curious in this connection to note that Marro finds marked physical resemblances between women criminals generally and the class of male criminals guilty of sexual offences; such are less length of arms and hands, less cranial capacity and greater extension of the transverse curve of the head.

It is worth while to enumerate briefly the probable causes of the sexual variation in criminality. There are perhaps five special causes acting on women: (1) physical weakness, (2) sexual selection, (3) domestic seclusion, (4) prostitution, (5) maternity.

There are firstly the physical and psychical traditions of the race embodied in the organisation of men and women. The extreme but rather spasmodic energy of men favours outbursts of violence, while the activities of women are at a lower but more even level, and their avocations have tended to develop the conservative rather than the destructive instincts. Apart from this, even if women were trained in violence, the superior strength of men would still make crimes of violence in women very hazardous and dangerous. Under existing circumstances, when a woman wants a crime committed, she can usually find a man to do it for her.

I have already frequently had occasion to note the approximation of criminal women in physical character to ordinary men. This has always been more or less carefully recorded, both in popular proverbs and in the records of criminal trials. Thus Sarah Chesham, a notorious wholesale poisoner, who killed several children, including her own, as well as her husband, was described as "a woman of masculine proportions;" and a girl called Bouhours, who was

executed at Paris at the age of twenty-two, for murdering and robbing several men who had been her lovers, is described as of agreeable appearance, and of sweet and feminine manners, but of remarkable muscular strength ; she dressed as a man ; her chief pleasure was to wrestle with men, and her favourite weapon was the hammer.

Marro has recently suggested that sexual selection has exerted a marked influence in diminishing the criminality of women. Masculine, unsexed, ugly, abnormal women—the women, that is, most strongly marked with the signs of degeneration, and therefore the tendency to criminality—would be to a large extent passed by in the choice of a mate, and would tend to be eliminated. It seems likely that this selection may have, at all events to some extent, existed, and exerted influence ; it is, however, not universally accepted.

The domestic seclusion of women is an undoubted factor in the determination of the amount of women's criminality. In the Baltic provinces of Russia, where the women share the occupations of the men, the level of feminine criminality is very high. In Spain, the most backward of the large countries of Europe, where the education of women is at a very low level, and the women lead a very domesticated life, the level of feminine criminality is extremely low ; the same is true, to a less extent, of Italy. In England, on the other hand, which has taken the lead in enlarging the sphere of women's work, the level of feminine criminality has for half a century been rising. Reference may perhaps also here be made to the fact that there is much more criminality among Irishwomen in England than among Irishwomen at home who lead

a more domestic life. It is a very significant fact that Marro found among his women criminals, in marked contrast to the men, a very large proportion (35 out of 41) who possessed some more or less honourable occupation; a large proportion of the women also were possessed of some property. It may not be out of place to observe that the growing criminality of women is but the inevitable accident of a beneficial transition. Criminality, we must remember, is a natural element of life, regulated by natural laws, and as women come to touch life at more various points and to feel more of its stress, they will naturally develop the same tendency to criminality as exists among men, just as they are developing the same diseases, such as general paralysis. Our efforts must be directed, not to the vain attempt to repress the energies of women, but to the larger task of improving the conditions of life, and so diminishing the tendency to criminality among both sexes alike.

Prostitution exerts an undoubted influence in diminishing the criminality of women, in spite of the fact that the prostitute generally lives on the borderland of crime. If, however, it were not for prostitution there would be no alternative but crime for the large numbers of women who are always falling out of the social ranks. As it is, in those families in which the brothers become criminals, the sisters with considerable regularity join the less outcast class of prostitutes; sometimes in league with their criminal brothers, but yet possessing a more recognised means of livelihood. There will be something more to say on this point a little later on.

The strongest barrier of all against criminality in women is maternity. The proportion of criminals

among young women with children is very small. Among men criminals the celibates are in a very large majority, but among women maternity acts as a still greater deterrent. Not only are young married women comparatively free from crime, but among married women, as Bertillon pointed out, those with children are distinctly less criminal than those without children. Of Marro's 41 criminal women, although all but one (who was undeveloped and ugly) confessed to having had sexual relationships, 12 had never been married, 10 were widows, 14 were married, but of these 7 (50 per cent.) were separated from their husbands. There is some significance, doubtless, also, in the fact that while in men the maximum of criminality falls at about the age of 25, in women this is not so. That is the age of maximum child-bearing; the age of maximum criminality in women is delayed until nearly the age of 35. In the 130 women condemned for premeditated murder, and studied by Salsotto, the average age was 34. Marro found that for nearly every class of criminals the average age of the women was much higher than that of the men. It is clear that the woman without children is heavily handicapped in the race of life; the stress that is upon her is written largely in these facts concerning criminality.¹ One might suspect this beforehand. Crime is simply a word to signify the extreme anti-social instincts of human beings; the life led most closely in harmony with the social ends of existence must be the most free from crime.

¹ While maternity has this beneficial influence, precocious and random sexual relationships have an equally grave influence in the opposite direction. This is clearly shown in the valuable details given by Marro.

It may be said—to sum up our brief discussion of this large question of women's criminality—that certain great barriers, partly artificial, partly natural, have everywhere served to protect women from crime. It is not possible absolutely to prove this conclusion, because women cannot be put strictly under the same conditions as men; a woman who lived under the same conditions as men, it need scarcely be said, would no longer be a woman. But it is made probable by the considerations here brought forward, and by statistics. Thus let us take the statistics for one year in a country where crime is so largely developed, and so carefully studied as Italy; an average year, 1886, may be selected. It will be found that a hundred condemned persons of each sex may be arranged according to age as follows:—

	Men.	Women.
Below 14	1.29 per cent.	1.41 per cent.
From 14 to 18	6.04 "	6.02 "
" 18 " 21	13.39 "	10.65 "
" 21 " 35	46.91 "	39.38 "
" 35 " 50	23.29 "	30.94 "
" 50 " 70	8.40 "	11.63 "
Above 70	0.68 "	0.57 "

Thus below puberty the relative criminality of girls is rather greater than that of boys, to become about equal at puberty; then during the earlier and chief period of child-bearing the criminality of women falls suddenly, becoming level with that of men at about the time of the cessation of the child-bearing period; after this the criminality of women becomes relatively much greater than that of men, becoming again about

the same, and in some years exceeding it, at the age of 70.

(*d*) One is inclined on first approaching the subject to make the clear line of demarcation between crime and vice, which is necessary in practical life. From the anthropological point of view, however, it appears on closer examination impossible to draw this clear line.

In the course of Lombroso's investigations he was surprised to find in the examination of supposed normal persons certain individuals who presented in a marked form those anthropologic signs of a low and degenerate type which he had usually found among criminals. On further inquiry it appeared that those individuals were of vicious character. Again, it is a remarkable fact that prostitutes exhibit the physical and psychic signs associated usually with criminality in more marked degree than even criminal women. While criminal women correspond on the whole to the class of occasional criminals, in whom the brand of criminality is but faintly seen, prostitutes correspond much more closely to the class of instinctive criminals. Thus their sensory obtuseness has been shown to be extreme, and it is scarcely necessary to show that their psychical sensitiveness is equally obtuse. Several valuable series of observations recently made on prostitutes in Italy and elsewhere have brought out interesting results in this respect. Thus, for example, Dr. Praskovia Tarnovskaia examined at St. Petersburg fifty prostitutes who had been inmates of a brothel for not less than two years, and she also examined, for the sake of comparison, fifty peasant women of so far as possible the same age and intellectual development. She found (1) that the

prostitutes presented a shortening, amounting to half a centimetre, of the anterior, posterior, and transverse diameters of skull; (2) 84 per cent. showed various signs of physical degeneration—irregular skull, asymmetry of face, anomalies of hard palate, teeth, ears, etc.; (3) 82 per cent. had parents who were habitual drunkards; (4) 18 per cent. were the last survivors of a large family of eight to thirteen children who had died early. Prostitutes may fairly be compared to the great class of vagabonds among men, who also live on the borderlands of criminality, and who also present a larger proportion of abnormalities than even criminals. Dugdale, in his valuable and thorough study of the "Jukes" family of criminals in America, shows that while the eldest sons in a criminal family carry on the criminal tradition, the younger sons become paupers or vagabonds, and the sisters become prostitutes. Of 250 recidivists condemned five times at Paris nearly all have begun by vagabondage. Mendel has examined 58 vagabonds in the workhouse at Berlin. He found 6 absolutely mad; 5 weak-minded; 8 epileptics; 14 with serious chronic disease; in the remaining 25 there was without exception pronounced mental weakness. We see here the organic root of the hopelessly idle, vicious character of the vagabond class. A philanthropic gentleman at Paris offered employment of various kinds, with payment at four francs a day, to all those who came to him complaining that they were dying of hunger and could get no work. 545, out of 727, did not even present themselves; some came and disappeared after the first half-day, having claimed their two francs; only 18, or 1 in 40, continued to work. It is not sufficiently known that these poor creatures, who

form such an extensive recruiting field for crime, are already, by the facts of their physical organisation, cut off from the great body of humanity. They need much more intelligent treatment than the antiquated workhouse is able to supply.

We must be careful not to confuse vice and crime. At the same time we have to recognise that they both spring from the same root. The criminal is simply a person who is, by his organisation, directly anti-social; the vicious person is not directly anti-social, but he is indirectly so. The criminal directly injures the persons or property of the community to which he belongs; the vicious person (in any rational definition of vice) indirectly injures these. They are both anti-social because they are both more or less unfitted for harmonious social action, both, from organic reasons, more or less lazy. Criminals and prostitutes, as Féré remarks, have this common character, that they are both unproductive. This is true also of vagabonds, and of the vicious and idle generally, to whatever class they belong. They are all members of the same family.

(e) We saw in Chapter I. that there is a fairly well-marked class of professional criminals. They are the *élite* of the criminal groups; they present a comparatively small proportion of abnormalities; their crimes are skilfully laid plots, directed primarily against property and on a large scale; they never commit purposeless crimes, and in their private life are often of fairly estimable character. They flourish greatly in a civilisation of rapidly progressing material character, where wild and unprincipled speculation is rife, as in the United States; their own schemes have much of the character of speculations, with this

difference, that they are not merely unprincipled but are against the letter of the law; notwithstanding the ability and daring they require, they are a relatively unskilled kind of speculation.

Tarde, and perhaps one or two writers following him, have endeavoured to show that all crime is professional, and that every physical and psychic characteristic of the criminal may be explained by the influence of profession. Tarde's always alert and intelligent advocacy makes it necessary to take note of this position, although in this unqualified shape it has not met with much adhesion at the hands of scientific investigators. I am persuaded, he says, that every large social class has its own characteristics. "If one examined hundreds or thousands of judges, lawyers, labourers, musicians, taken at random and in various countries, noting their different characters, craniometric, algometric, sphygmographic, graphologic, photographic, etc., as Lombroso has examined hundreds and thousands of criminals, it is extremely probable that we should ascertain facts not less surprising; thus, for instance, we might succeed in finding *instinctive lawyers*—born to defend instinctive criminals. . . . I should like to see the instinctive criminal opposed to the instinctive man of science, or the religious man, or the artist. It would be curious to see him compared to the moral man, and to learn if the latter is the antipodes of the criminal physically as well as morally."¹

Tarde has again more recently stated his position: "One knows that at the first glance at a woman a skilful observer infallibly divines her habits of prostitution. . . . Among the innumerable varieties of

¹ *La Criminalité Comparée*, 1886, pp. 51-53.

human nature which appear at the surface of a race and proceed perhaps from its lowest depths (for the variations of a theme are, I believe, its true *raison d'être*, and not *vice versâ*), every social or anti-social profession operates a selection to its own profit; it attracts the organisms most adapted to the kind of life which it leads, and to the end which it pursues, so that if one submitted to anthropometric measurement lawyers, doctors, priests, merchants, especially those who have the most decided vocation for their profession, we should not fail to find for each category the proportional preponderance of a certain number of peculiarities, morphologic or physiologic, elsewhere in less proportion. It must inevitably be so whether a career is open to every one or shut up as a caste, for in the latter case hereditary accumulation of acquired aptitudes from the use of the same functions transmitted from generation to generation produces an analogous effect, even with superior intensity."¹ The recent investigations of Bertillon at the Paris Prefecture of Police have shown that by large photographs of the hand it is possible to detect the worker at a large number of crafts. By such acquirement as this, as well as by a process of natural selection, the men of every class develop a special set of psychic and physical peculiarities; thus Tolstoï, in his *Death of Ivan Ilyitch*, has admirably described the special attitude and manner common to professional men generally, and in this general professional class there are subdivisions, so that every professional man instinctively recognises his fellows. It is so among criminals. Mr. Davitt sketches, for instance, the special class of "hooks," or professional

¹ "Criminologie," *Revue d'Anthropologie*, Sept. 1888.

pickpockets, "so well outlined in gait, constant use of slang, furtive looks, almost total want of tact in their ordinary conduct, with an instinctively suspicious manner in almost all their actions, that they are as easily distinguishable from the other criminals of a prison as they are recognisable to their constant pursuers, the police, when abroad in the world."

If we were to look at the matter in a rather more thorough and scientific manner, there can be no doubt that the previsions of Tarde would be justified, and that men would fall into certain natural anthropologic groups, according to their habitual modes of feeling and thinking and acting, the nature of each person, to some extent, "subdued to what it works in, like the dyer's hand." In each class there would be different degrees in sensory perception, in cranial shape and size, in muscular development. Such investigations will no doubt be systematically carried out in time. At present, owing to the extraordinary apathy of anthropologists, and consequently the general indifference to the importance of studies connected with the development and varieties of men, scarcely anything is known regarding the matter.

But important as professional selection is, it cannot account for everything. Indeed no serious attempt has been made to substantiate it by reference to the details of criminal anthropology. M. Tarde is a magistrate; no scientific man would have attempted to account for all the facts that have now accumulated by professional selection and acquired habits.

It is interesting to note that Topinard, the distinguished anthropologist, who has bestowed some severe and not unmerited criticism on portions of

Lombroso's work,¹ while accepting the professional theory of crime, by no means considers that it is sufficient to explain the whole of the facts ; remembering the teaching of Lélut and Baillarger, under whom he had studied mental disease, he calls in the aid of the morbid element :—"Criminals constitute a special professional category in society, in the same way as men of letters, men of science, artists, priests, the labouring classes, etc., but a complex category in which the most diverse elements enter: the insane or those predisposed to insanity, epileptics and those predisposed to epilepsy, the alcoholic, the microcephalic, the macrocephalic, those predisposed by some vice of organisation or of development, anterior or posterior to birth, betraying itself sometimes by very evident anatomical anomalies, those who are predisposed by family traditions and inclinations, those whose moral instincts are perverted by individual education and social environment, and finally those who are criminals by accident, without preparation or predisposition."² Professional characters will carry us a long way when we are seeking to account for natural social groups. But in the anti-social groups another and more morbid element enters. It is indeed largely the presence of morbid elements which gives these groups their anti-social character.

(f) The morbid element in criminality has sometimes been too strongly emphasised, but it would be idle to attempt to deny its importance. The frequency with which insanity appears among criminals, even when the influence of imprisonment may with considerable certainty be excluded, is well

¹ "L'Anthropologie Criminelle," *Revue d'Anthropologie*, 1887.

² *Loc. cit.*, p. 686.

ascertained. Of recent years also the close connection between criminality and epilepsy and general paralysis has often been shown. I have several times pointed out that the resemblances between criminals considered as a class and the insane so considered are by no means great; at many points they are strongly contrasted. The resemblances with epileptics, on the other hand, are anthropologically very marked, as Lombroso was the first to point out in detail. He has also observed that those regions of Italy which produce most epileptics produce also most criminals. Epilepsy has a certain relationship to insanity; it tends naturally to weak-mindedness, although some of the world's greatest men have been epileptics; and there is in epilepsy a tendency to the development of brutal, unnatural, and bloodthirsty instincts. The slighter and more concealed forms of epilepsy offer also a very fruitful field for investigation in this respect.¹

But the roots of criminality are not only deeper than professionalism, they are deeper also than any merely acquired disease. I have frequently had occasion to note the remarkable resemblances between criminals and idiots. There is the same tendency to anatomical abnormalities of the muscles, arteries, bones, etc.; in both the muscular system is weak; there is the same tendency also to small and weak hearts, with valvular defects. There is, again, the same sensory obtuseness, with the same exception in the case of sight, which is remarkably good, with rarity,

¹ All the evidence which has so far been accumulated with regard to the connection between criminality and epilepsy will be found in considerable detail in the second volume of Lombroso's great work, *L'Uomo Delinquente* (1889). To announce any definite conclusions would still be premature.

it seems, of colour-blindness. Criminality, like idiocy, tends to run in the line of the eldest sons, and in both the hereditary influences are frequently bad. Cranial asymmetry is common in idiots as well as among criminals; and while meningitis is a common cause of idiocy, such evidence as we possess shows that it is also common in criminals. Tubercular disease is again common in both. Epilepsy, to which so much importance has of late been attached in connection with criminality, is notoriously common among idiots, being found among nearly 25 per cent.¹ The relations of criminality to idiocy have not yet been sufficiently studied.

The criminal is, however, by no means an idiot. He is not even a merely weak-minded person. The idiot and the feeble-minded, as we know them in asylums, rarely have any criminal or dangerous instincts. Another term is frequently used to denote vicious or criminal instincts in a person who is, mentally, little if at all defective; he is said to be "morally insane."

The term "moral insanity" was originated nearly half a century ago by an Englishman, Dr. Prichard, who in his *Treatise on Insanity* declared that insanity exists sometimes with an apparently unimpaired state of the intellectual faculties; and the conception has been developed by Krafft-Ebing, Maudsley, and many others. The term itself is an unfortunate one; the condition described by no means falls in easily as a subdivision of insanity, and it is moreover frequently of a congenital character. There is now a very

¹ See Ireland's *Idiocy*, and Langdon Down's *Mental Affections of Childhood and Youth*. The latter contains many valuable facts and suggestions in this connection.

general tendency to drop the expression "moral insanity," and to speak instead of "moral imbecility."

The condition in question, by whatever name it is called, is described by alienists as an incapacity to feel, or to act in accordance with, the moral conditions of social life. Such persons, it has been said, are morally blind; the psychic retina has become anæsthetic. The egoistic impulses have become supreme; the moral imbecile is indifferent to the misfortunes of others, and to the opinions of others; with cold logic he calmly goes on his way, satisfying his personal interests and treading under foot the rights of others. If he comes in contact with the law then his indifference changes into hate, revenge, ferocity, and he is persuaded that he is in the right. Although so defective on the moral side, these persons are well able to make use of the abstracted intellectual conceptions of honour, morality, philanthropy; such words are indeed frequently on their lips, and it is quite impossible to convince them of the unusual character of their acts. They are absolutely and congenitally incapable of social education, systematically hostile to every moralising influence. Being themselves morally blind, it is their firm conviction that all others are in the same condition; they disbelieve in the possibility of virtue, and being often possessed of considerable intellectual ability, maintain anti-social theories with much skill.

"Moral insanity" does not probably stand for any definite morbid condition. It is used as a convenient term to describe a certain group of psychic symptoms which are not found in a developed condition in the normal man. It is obvious that these symptoms closely resemble those we have already described as

characterising the criminal in his most clearly-marked form—the instinctive criminal. The morally insane person has been identified with the instinctive criminal by Lombroso, Marro, Ferri, Benedikt, Colajanni, and many others. The fusion has, however, been rejected by some—by Binswanger and Kraepelin, for instance. There can, however, be little doubt that the two groups overlap in very large part.

The group of instinctive criminals therefore still stands fairly apart among the other groups of criminals, approximating, but not fusing with, these various morbid and atypical groups. The outlines blend, but each group is distinct at the centre. It will be the work of the future to arrange, and if necessary to re-form, these various groups.

It is much to be able to see, even so clearly as we do to-day, the human classes of arrested or perverted development who lie in the dark pool at the foot of our social ascent. Even our present knowledge is sufficient to serve as the justification for a certain amount of social action. We owe this to the labours of a succession of physiologists, alienists, anthropologists, and criminologists during the past century.

Up to recent times the criminal has been regarded as a kind of algebraic formula, to use Professor Ferri's expression; the punishment has been proportioned not to the criminal but to the crime. We are now learning to regard the criminal as a natural phenomenon, the resultant of manifold natural causes. We are striving to attain to scientific justice. We are seeking in every direction to ascertain what is the reasonable treatment of the eccentric and abnormal members of society, in their interest, and in the still higher interests of the society to which we belong.

To seek for light in the fields of biology and psychology, of anthropology and sociology, has seemed to many a discouraging task. The results are sometimes so obscure ; sometimes, it even seems, contradictory. In practice, it is said, such considerations count for nothing. Law must only concern itself with absolute certainties, with abstract formulæ, with geometrical routine. But human nature will not fit in with formulæ ; when men and women are geometrical figures, an abstract legal system will answer all their needs. If the path lies through a jungle, what is the use of the best and straightest of roads that leads astray ? If a critic were to point out to a biologist—to take another illustration from Ferri—the limitations of the microscope, he would be entitled to reply—But excuse me, however imperfect the microscope may be, would it be better to dispense with the microscope ? Much less when we are dealing with criminals, whether in the court of justice or in the prison, or in society generally, can we afford to dispense with such science of human nature as we may succeed in attaining.

CHAPTER VI.

THE TREATMENT OF THE CRIMINAL.

IF, as now scarcely admits of question, every truly criminal act proceeds from a person who is, temporarily or permanently, in a more or less abnormal condition, the notion of "punishment" loses much of its foundation. We cannot punish a monstrosity for acting according to its monstrous nature. Moreover, who among us is perfectly normal, and what tribunal is entitled to punish? The verdict of science is one with that of Christianity—"Judge not."

Some such argument as this has weighed with those thinkers and investigators who have of late shown a disinclination to talk of punishment, and have instead spoken of the "social reaction against crime." The old conception of punishment was founded on the assumption of the normality of the criminal; he was a normal person who had chosen to act as though he were not a normal person—a vine, as it were, that had chosen to bring forth thorns—and it was the business of the penologist to apportion the exact amount of retribution due to this extraordinary offence, with little or no regard to the varying nature of the offender; he was regarded as a constant factor. Lord Chief Justice Coleridge, not many years ago, "when addressing," says the Rev. J. W. Horsley, "in our hearing, an assemblage of those who had all belonged to the criminal class,

expatiated, somewhat to their astonishment and much to their gratification, on the iniquity of giving a severe punishment for a theft that was petty, even though it had been preceded by many thefts and convictions." Obviously the punishment was directed at the offence; it was not necessary to consider the offender at all. This conception, formulated by theorists who delighted in abstract notions, has been shown to lead directly into devious paths of metaphysics and ethics; it has, consequently, been fertile of much vain disquisition. On the whole, the results of this have not contributed to confirm the credit of the notion, and it has seemed better—at once sounder theoretically and more convenient practically—to dispense with this antiquated conception of punishment. Whenever one person trespasses on the rights of another person, or of the community to which he belongs, there is an inevitable social reaction against the person who has committed the anti-social deed. Society says to the individual who has violated its social feelings—Here, my fine fellow, we are not going to stand this conduct of yours; we must have an end of this: and it proceeds to act in accordance with the varying measure of its wisdom. This is the basis of all legal action against the criminal; in its crudest form it is Lynch law; in its highly developed form it shows itself in the elaborate training bestowed on the criminal at Elmira. Such social action is a solid and permanent fact, independent of all metaphysical theories; and it is this we are concerned with when we approach the question of the treatment of the criminal.

At a very early period in the development of every barbarous race there arise two institutions for dealing with the criminal—the prison and another, still more

decisive, appearing in various forms, the cross, the stake, the gallows, the axe.

I do not propose to give more than a few words to the question of capital punishment, because it does not seem to be any longer a question of much magnitude or importance. A century, even three-quarters of a century, ago it was a different matter. In England especially capital punishment seems to have flourished luxuriantly. A writer in Elizabeth's reign says that in Henry VIII.'s time seventy-two thousand thieves and vagabonds were hanged. The statement is set down on hearsay evidence only, but is sufficient to show that the number must have been very large. About a century ago more criminals, it is said, were put to death in England than in any other part of Europe; many persons still living remember the days of wholesale hanging, and even the execution of a child of twelve for rioting. It is less than half a century since a child of nine was condemned to death for stealing paint, value twopence-halfpenny, and since men were hanged for stealing sheep and post-office letters.

There can be little doubt that capital punishment is dying out. In Switzerland, in England, in Italy, for example, the tendency is very clearly marked. Whether its complete extinction is altogether a matter for rejoicing is a question concerning which there is not complete unanimity among those whose opinions carry most weight. An impressive body of opinion is in favour of putting instinctive criminals to death, not out of revenge, but in the spirit in which Galen and Seneca advocated the destruction of incorrigible offenders against social life, regarding them as diseased members to be removed for the advantage of the whole

social body. Garofalo, the distinguished Neapolitan lawyer, is perhaps the chief advocate of capital punishment among those who are working for legal reform. He points out that the death penalty is the only one the criminal really dreads, and tells of offenders who committed their crimes under the impression that capital punishment had been abolished, and that they were to be provided with food and shelter for the rest of their lives. On the other hand, it has also been shown that the *éclat* and public interest involved in a trial for life or death serves as an incentive to the morbid vanity of criminals. Such a penalty as burning "for example of others, as hath been accustomed," according to the phrasing of Henry VIII.'s statute, has been an example often enough in another sense than the statute intended.

On the whole, we may perhaps be well satisfied that capital punishment—"the shameful practice," as it has been epigrammatically styled, "of hiring for a guinea an assassin to accomplish a sentence which the judge would not have the courage to carry out himself"—is threatened with extinction in civilised countries. It has the disadvantage of being irrevocable. There would be little chance of mistake if it were only applied to recidivists; but these are a class to whom it is rarely applied. It is certain that mistakes have occurred when in the opinion of the judge the evidence of guilt was absolutely convincing. It is true that the chief cause of this extinction in democratic countries is not the benefit of the criminal, or even the welfare of society; it is a tender regard for the sentiments of the general public. "To punish murder by lifelong imprisonment," as Sir Robert Rawlinson observed, "is a far severer fate than

sudden death, but it is not so revolting." We have to see to it that our substitutes for the death penalty are of a humane and rational character, and that they afford an equal protection to society. It should never be possible to address to society the words which the daring Duc de Montausier addressed to Louis XIV. concerning a criminal who was finally executed after committing twenty murders: "This man has only committed one murder, the first, and it is you who, by letting him live, have committed the other nineteen." But, as Benedikt well observes, to kill the criminal is never satisfactory, because we do not kill his accomplices, bad social conditions and defective institutions; we leave untouched the false social sentiments that urged the unmarried girl to kill her own child, or the rigid marriage system that made it easier for the man to kill his wife than to leave her or to allow of her leaving him. Moreover, it must be said that murderers, whom alone it is considered justifiable to eliminate by death, are not usually the most degraded of criminals or the most dangerous to society. In Russia, where capital punishment for common-law offences was abolished more than a century ago, murderers are condemned to hard labour for a period of years, after which they are settled in Siberia. "Eastern Siberia is full of liberated assassins," remarks Prince Krapotkine, "and, nevertheless, there is hardly another country where you could travel and stay with greater security; while the unceasing robberies and murders of which Siberia complains now, take place precisely in Tomsk and throughout Western Siberia, whereto no murderers and only minor offenders are exiled. In the earlier part of this century it was not uncommon to find at

an official's house that the coachman was a liberated murderer, or that the nurse who bestowed such motherly care upon the children bore imperfectly obliterated marks of the branding-iron."¹ Mr. Davitt, speaking from an extensive acquaintance with criminals, says:—"The really hardened, irreclaimable criminal will never commit a murder. . . . The most heinous of all offences—murder deliberately intended and planned before commission—is, ordinarily, the offspring of the passions of revenge and jealousy, or the outcome of social or political wrongs; and is more frequently the result of some derangement of the nobler instincts of human nature than traceable to its more debased orders or appetites."² Again, Miss Carpenter, in her *Female Life in Prison*, wrote:—"Some women are less easy to tame than the creatures of the jungle. . . . And yet these women are not always in for the worst crimes: there are few, if any, murderers amongst them; they have been chiefly convicted of theft after theft, accompanied by violence." These observations are entirely in accord with the results of criminal anthropology; the murderer belongs very frequently to the class of criminals by passion, the least anti-social of all, and is at other times frequently the subject of some morbid impulse, epileptic or insane.

Perhaps the most powerful reason in favour of the probable disappearance of capital punishment is the humanising influence that would be exerted on the community generally. The unreasoning outbursts of ferocity in which, especially among young and emotional democracies, some morbid and distracted

¹ *In Russian and French Prisons*, p. 359.

² *Leaves from a Prison Diary*. Lecture I.

creature who fires at a political personage is hurried with glee to the scaffold, or some half-witted human thing who commits a rape is perhaps actually torn to pieces, are not wholesome manifestations of the social spirit. They are far less excusable than the deeds by which they are aroused, for the reason that they arise in more normally constituted persons. So long as capital punishment is legitimate there is, however, at least the appearance of an excuse for the development of these brutalising outbursts. All that is finest in civilisation is bound up with a self-restraint and humanity, as well as a more intelligent insight, which, while admitting a more chastened social reaction, makes ferocity impossible.

Let us turn to the prison. During the last century a vast amount of care and enthusiasm, philanthropic and administrative, have been expended on the elaboration and development of prisons. It is needless to sketch the history of this development, which seems now to have come to a standstill; it has often been done, and is easily accessible. It is however very interesting and instructive to take note of the deliberate opinions expressed during the last few years, from various points of view, by those who have had the opportunity of studying most intimately the modern developed prison.

A curious fate has befallen this ancient institution. In its more primitive form it now arouses universal disgust and horror. The Russian prisons of Siberia are, for instance, a by-word of reproach. The physical and mental torture which they inflict, wholesale and indiscriminately, on men and women, on political suspects as well as on the lowest criminals, have been described over and over again, from within and from

without, during the last fifty years, in Dostoieffsky's *Recollections of the Dead-House*, by Maximoff, and by Krapotkine, and still, when Mr. Kennan repeats the old story, a wave of indignation passes across the civilised world. Elsewhere on the fringe of European civilisation the primitive prison is still scarcely changed. The Spanish prisons are often filthy and overcrowded, and the inmates are maintained in laziness. In the Spanish prison of Ceuta, in Morocco, there are 3000 convicts, mostly for life, and crowded together, so that 112 sleep in one room.¹ The

¹ Here and in the following lines I am quoting from Mr. Charles Cook of Hyde Park Hall, London, whom Mr. Spurgeon has called "the Howard of the present day." Mr. Cook deserves all honour for his visits (primarily with a religious object) to some of the worst prisons of the world—visits for which he has paid the old penalty of "gaol fever." With reference to Ceuta, I should add that Mr. Cook's impressions are not altogether confirmed by competent Spanish prison reformers. Ceuta, which dates from the seventeenth century, is a kind of criminal Gheel, its chief peculiarity being the close relationship between the free and the convict population. It is, as Salillas, from whose *Vida penal en España* I take the following remarks concerning it, observes, a convict city. There is not strictly any isolation as in the other prisons of the Peninsula or the Balearic Isles; nor is it an extraneous focus of moral infection, as at Saragossa or Valladolid; nor a merely economic supplement, like that of Alcalá and some others; nor, in short, a centre of inaction or of artificial life. The convicts are an integral part of the population, sharing in the economic, social, urban, military, administrative, industrial, and agricultural order of its life, and fulfilling a great variety of functions. They obtain and carry the materials for constructing the fortifications and buildings, make and repair the roads, erect forts and houses, work in timber and in iron, cultivate the field. They are painters, photographers, shoemakers, tailors, servants fulfilling confidential domestic duties; they are clerks, even professors lecturing on arts, sciences, and philosophy. Between the free and the convict population, Salillas says, there is more than affinity; there is a kind of organic dependence. Convicts enter the houses without hindrance; no one regards them with dread, or fears to meet them. Who is the coachman who is driving? A convict. Who is the lad serving at table? A convict. And the cook who

filled with untried prisoners. In Greece the prisoners are, "if possible, dirtier than those of Egypt, no work, no books, and but little food. Some of the rooms containing ten prisoners were less than twelve feet square." Many of the prisons of South Africa are in a wretched condition, and some of those in the United States are little better.

A century ago most of the prisons of England could fairly have been included in any such enumeration as that I have just attempted. "They are ironed," wrote Howard of the English convicts of 1773, "thrust into close, offensive dungeons, and there chained down, some of them without straw or other bedding. They continue in winter sixteen or seventeen hours out of the twenty-four in utter inactivity, and immersed in the noxious effluvia of their own bodies. Their diet is at the same time low and scanty; they are generally without firing; and the powers of life soon become incapable of resisting so many causes of sickness and despair." There was not, as a recent writer remarks, so much consideration for prisoners in Britain as there had been in the reign of the Emperor Constantine, for the Romans of the fourth century did not permit the imprisonment of men in the same room with women. Howard found a girl locked up all day with two soldiers in the Bridewell at St. Albans, and in many of the gaols there was insufficient provision for the separation of the sexes.

We have changed all that. The best prisons of England, France, the United States, Belgium, Italy, and some other countries, are models of ingenuity, cleanliness, and routine. It cannot be said, indeed, that we have succeeded in hindering communication

between prisoners, or in preventing an illicit traffic in tobacco, etc., or even the practice of unnatural intercourse; and we do not trouble ourselves too much to reform the prisoner. Yet even these laxities of discipline have added materially to the prisoner's comfort; and if we have not reformed the prisoner we have at least reformed the prison, an easier task, and one which shows more tangible results. "The prisoner of the present day is well cared for," remarks Dr. Gover, the medical inspector, in a recent Report of the Directors of Convict Prisons; "he is supplied with all the necessaries, and not a few of the comforts of life; and his existence is, to say the least, rendered very endurable. The labour exacted from him is not irksome in its character, and he is not subjected to any depressing punishment unless it be for idleness or for serious misconduct." But the work is not of an exhausting character, so that there is no very strong motive to laziness. "Hard labour," Mr. Horsley remarks, "is such that no prisoner could get a living outside if he did not work harder." It is not surprising that under these circumstances the prisoner flourishes. "In our prisons now there is," says Dr. Richardson, "a lower mortality and probably a lesser sickness than in the most luxuriously appointed and comfortable houses in the commonwealth." And what, he asks, is more natural when we find "epidemic poisons shut out of our prisons; famine shut out; luxury shut out; drink shut out; exposure to cold and wet shut out; the acute and most destructive kinds of mental worry shut out; the hungry strain for to-morrow's bed and board shut out; the baneful association with criminal life at large shut out!"

And yet we are dissatisfied! This comfortable, easy-going routine of the modern prison is viewed with scarcely more approval by the thoughtful investigator of to-day than the horrors of the primitive prison. It is deeply interesting and suggestive to take note of the opinions expressed during recent years by those most intimately acquainted with the modern prison. "Why are our prisons failures?" asks Mr. Horsley, who is as impressed as much as any one by the material progress of prisons. "Men are asking, and will more loudly ask, 'Why are our prisons such utter failures?' In the face of the phenomena of recidivism, and men and women with hundreds of convictions, it is absurd to imagine that they are as deterrent as they should be." The prisoner is, he points out, but temporarily suspended from habits of crime by circumstances not under his own control: "He may even boast of his intentions, but out he must go, with as much safety to the State as if all mad dogs were muzzled for twenty-four hours and then all unmuzzled, because it had been found that in that period a certain proportion ceased to be dangerous; or as if all small-pox patients were discharged from hospital so many weeks after reception, whether cured or not."¹ Another prison chaplain (Rev. C. Goldney), speaking from an experience of twelve years, writes still more recently:—"I say, unhesitatingly, that if a society for the manufacture of criminals were set on foot, that society could in no better way further its aims than

¹ *Jottings from Jail* (1887), pp. 186, 190. Judge Willert (*Das Postulat der Abschaffung des Straffmasses mit der dagegen Erhobenen Einwendung*), as quoted by Garofalo, uses the same simile to show the absurdity of this system.

by pressing for the imprisonment of every little boy and girl who could, on any decent pretext, be brought before a bench of magistrates. Prison officials well know the hardening influence of gaol life on the young, and statistics show how unlikely it is that the first term of imprisonment will be the last in the case of children of tender years. They learn the secret which should jealously be kept from them—that a short imprisonment is after all no such very terrible punishment.” Mr. Michael Davitt has learnt by actual experience the realities of English convict life at Dartmoor, Portsmouth, and Portland, and the valuable book in which he has summed up those experiences is full of wise and fruitful suggestions. After pointing out that philanthropic intentions on the part of the heads of a department are no guarantee for their administration at the hands of warders and assistant-warders, he continues¹:—“Penal servitude has become so elaborated that it is now a huge punishing machine, destitute, through centralised control and responsibility, of discrimination, feeling, or sensitiveness; and its non-success as a deterrent from crime, and complete failure in reformative effect upon criminal character, are owing to its obvious essential tendency to deal with erring human beings—who are still men despite their crimes—in a manner which mechanically reduces them to a uniform level of disciplined brutes. There is scarcely a crime possible for man to be guilty of, short of murder, which should not, in strict justice, be expiated by seven years’ infliction of a punishment that has been brought to such a nicety of calculation that there is the closest possible surveillance of every one

¹ *Leaves from a Prison Diary*, pp. 173, 174.

undergoing it night and day, together with an unceasing conflict between every feeling in the prisoner that is superior to a mere condition of animal existence and the everlasting compulsion to refrain from almost all that it is natural for man to do, and to do what it is to the last degree repugnant for any rational being to consent to perform. Yet wretches who have had a London gutter or a workhouse for their only moral training-school, and who have been subsequently nurtured in crime by society's other licensed agencies of moral corruption, receive ten, fifteen, and sometimes twenty years for thefts and crimes which should, in justice, be expiated by a twelve months' duration of such punishment. It is these horribly unjust penalties that beget many of the desperadoes of Portland, Chatham, and Dartmoor, the murderers of warders, the malingerers, and the partial maniacs, and which implant in the minds of convicts that ferocious animosity against law and society which turns so many of them into reckless social savages." Prince Krapotkine has also had practical acquaintance with prisons, and his conclusions also are deserving of study. In his very interesting book, *In Russian and French Prisons*, after describing the routine of the Maison Centrale at Clairvaux, one of the best-arranged of modern prisons, he adds:—"Such is the regular life of the prison, a life running for years without the least modification, and which acts depressingly on man by its monotony and its want of impressions; a life which a man can endure for years, but which he cannot endure—if he has no aim beyond this life itself—without being depressed and reduced to the state of a machine which obeys but has no will of its own; a life which results in an atrophy of the best qualities

of man, and a development of the worst of them, and, if much prolonged, renders him quite unfit to live afterwards in a society of free fellow-creatures." And again he remarks:—"The real cause of recidivism lies in the perversion due to such infection-nests as the Lyons prison is. I suppose that to lock up hundreds of boys in such infection-nests is surely to commit a crime much worse than any of those committed by any of the convicts themselves."¹ M. Émile Gautier, a companion of Prince Krapotkine's, who has written a series of remarkable articles on this subject,² calls the prison a hot-house for poisonous plants. He points out what has often been remarked by others (Mr. Davitt, for instance), the great difference between the "bon détenu" and the "bon sujet." "The recidivists are always the most easy to manage, the most supple—or the most hypocritical—and therefore the favourites with the officials. The misfortune is that this 'bon détenu,' according to the formula, soon becomes under this *régime* as incapable of resisting his comrades, instinctive criminals or professional evil-doers, as the warders, and as little refractory to temptation, to unwholesome stimulus, to the attraction of an illicit gain, or to the contagion of bad example, as to discipline. He can only obey—no matter whom!" And elsewhere he says: "It is well to remark that there is not one of the passions, natural or factitious, of man, from drunkenness to love, which cannot find in prison at least a semblance of satisfaction. . . . It need not be said that the prisoner afterwards carries out with

him into the world all these abnormal vices in a more developed form. The prison indeed, as it is organised, is a sewer throwing out into society a continuous flood of purulence, the germs of physiological and moral contagion. It poisons, brutalises, depresses, and corrupts. It is a manufactory at once of the phthisical, the insane, and the criminal." Dr. Napoleone Colajanni, the eminent criminal sociologist of Naples, confirms from personal experience the evidence given by Prince Krapotkine and M. Gautier. A writer who is peculiarly well informed as to the manners and customs of the criminal classes in England writes:—"Looking at our present system of dealing with thieves, examining it from every side, it is clear that nothing can be more clumsy and inefficient—except for evil. Let any one of robust health fancy himself a prisoner within four walls, employed day after day in severest labour, without a face to look at except that of the tyrant warder or the scowling criminal, without relaxation or kindly intercourse of any kind; with nothing, in short, to subdue the darker feelings, but with everything to nourish them. Let any one of robust health fancy himself enduring this year after year—for a fifth, a fourth, or even half of a life—and then say what sort of creature he would probably become. Then there is the expense of a system which does not reform nor get rid of the thief—in old days gaol fever did the latter when the halter failed—but merely hoards him up for a while to turn him loose on society more wolfish than ever. As we deal with the thief he is our most costly national luxury."¹ The courts of Paris and of Bourges have not hesitated to declare

¹ *Sketches from Shady Places*, by Thor. Fredur (1879), pp. 206-7.

that the chief cause of recidivism is to be found in the prison and its *régime*.¹ In one of the foremost American States, Ohio, an influential committee, including the Governor of the State, has reported: "With less than half-a-dozen exceptions, every gaol in Ohio is a moral pest-house and a school of crime." The Lord Chief Justice of England (Lord Coleridge) is reported as saying, in 1885, that "there were few things more frequently borne in upon a judge's mind than the little good he could do the criminal by the sentence he imposed. These sentences often did nothing but unmixed harm, though he was sure that throughout the country the greatest pains had been taken to make our prisons as useful as possible in the way of being reformatories. But, as a matter of fact, they were not so."

M. Laloue, inspector-general of prisons in France, stated before a commission that "with our existing system, twenty-four hours' imprisonment suffices, under certain circumstances, to ruin a man." The following conversation ensued. *M. Tailhand*: "There is perhaps some exaggeration in the statement that twenty-four hours' imprisonment can ruin a man." *M. Laloue*: "I do not exaggerate. I say what I have seen. The prisoner meets a corrupt recidivist; they appoint a *rendez-vous* outside, and that man is lost." *M. Tailhand*: "He must be a man of very weak character." *M. d'Havssonville*: "It is such characters that succumb."

Professor Prins, inspector-general of Belgian prisons, and the chief authority in Belgium on these questions, writes:—"What is the advantage, unless the necessity is absolute, of putting into prison the head of a family

¹ *Enquête Parlementaire*, tome v., pp. 345, 381, 542, quoted by Joly.

to devote him to infamy, to compromise him in the eyes of his fellow-workmen, of his wife, and of his children? Is it not to condemn these latter to abandonment, misery, and mendicity? Is it not to join to the wretchedness which is the act of destiny, a wretchedness which is the act of law? Is it not, in short, to degrade and ruin the delinquent, thus to deliver him over to the suggestions of despair, and to risk making him a recidivist?"¹

Garofalo, the eminent Neapolitan lawyer, certainly one of the most sagacious of those who have in recent years studied the treatment of the criminal, writes:— "Suppose that in some legendary country an austere king forbade all flirtation with married ladies, and that the punishment threatened to the guilty one should be a prohibition to leave during several weeks a certain club, a magnificent hotel, with gardens and terraces, where this gentleman would find his best friends, his old comrades at board and game, who, far from blaming him, would be glad to do the same. In this sympathetic environment we may be sure they would treat with much contempt the absurd law and the punishment it inflicted. Who would not laugh to think that it should be pretended that after such a punishment this individual would not recommence his ordinary life and commit again the very offences for which he has been punished?"²

"Imprisonment," affirms Reinach, in his often-quoted work, *Les Récidivistes*, "especially if short, is an excitation to crime." "As to the reformation of the criminal," remarks Dr. Paul Aubrey, in a recent and able study, *Le Contagion du Meurtre*, "that is a

¹ Adolphe Prins, *Criminalité et Répression*, 1885.

² *Le Criminologie* (1888), p. 220.

myth; the prison is still the best school of crime which we possess." "The houses of correction are much more houses of corruption," said a young Italian thief. "Clever robberies are arranged in prison," a thief told the Abbé Moreau; "the prisoners all know each other; once at liberty they can find one another." "I have seen young men enter the Grande Roquette," the Abbé observes elsewhere, "guilty, but not corrupted, who went out decided to commit crimes which a few months before they would have regarded with horror."

It is unnecessary, I trust, to accumulate further evidence on this point; it is a melancholy though far from a difficult task. It must be sufficiently clear that the modern prison, with its monotonous routine of solitary confinement, varied by bad company, is fruitful of nothing but disaster to the prisoner and to the society on which he is set loose. Such mitigation of its influence as may be found is chiefly due to voluntary charitable agency.

There is one group apart from the chorus of damnation which has of late years greeted the modern developments of the prison. Unfortunately it is a sinister and terrible group of exceptions. The prison is an incubator for those who are young in crime, a place of torture for those who possess the finer feelings of humanity, that is precisely the class of people, usually, who ought not to be sent to prison; but to habitual offenders, the confirmed recidivists, precisely the class of people on whom the prison ought to work as at once a reforming and deterring influence, it is simply a welcome and comfortable home. It is a well-known fact that the prison is preferred to the workhouse. "Whole

classes," as Mr. Horsley truly remarks, "are brought to consider that, from several points of view, the prison is preferable to the workhouse." "Amidst the mass of our fallen sisters in gaol," a prison matron observes (*Female Life in Prison*), "there are these strange practical philosophers — women who have weighed all the chances between the workhouse and the prison, and who, being compelled to choose between one and the other, strike the balance in favour of the gaol. A little less liberty, but more kindness and attention; better food and more friendly faces—only the key turned upon them, and their sleeping chamber called a cell!" "It is a painful fact," remarks Mr. F. W. Robinson, "that the ordinary female convict considers herself above the woman in the Union. 'Look at these shawls,' was said once by an indignant prisoner upon a new style of shawl being introduced into the service; 'do they take us for those poor workhouse wretches, I should like to know!'" The author of *Five Years' Penal Servitude* says—"A farm-labourer has told me frequently that he worked far harder for his eleven shillings a week than ever he had at stone-quarrying or anything else in prison. When at home he seldom, if ever, had meat of any sort, and his bed was but a poor affair compared to his prison couch. Here in prison, comparatively speaking, he fared sumptuously every day, and I can assure the reader he considered the living luxurious compared to what he had at home." "There can be no doubt," as Beltrani-Scalia remarks, "that the life of a prison is superior, from a material point of view, to that which most prisoners are accustomed to lead in liberty." To the habitual criminal that is everything. The perpetra-

tion of offences for the purpose of obtaining admission to prison is far from uncommon, and the criminal slang of various nations with its friendly synonyms for the prison is very significant on this point. There is a popular Sicilian song which says: "He who speaks evil of the Vicaria [prison of Palermo] ought to have his face cut. He who says that prison punishes, how he is deceived, poor devil!"¹ And again: "Here only will you find your brothers and friends, money, good cheer, and a peaceful time; outside you are always in the midst of your enemies, and if you cannot work you will die of hunger."² Reinach mentions a mason who at the beginning of winter committed a small offence in order to spend the winter comfortably in a warm prison. The prison of Vienne (Isère) has, it is said, long been a favourite place of resort during the winter. Several of the hundred prisoners studied by Rossi had sought in prison a winter refuge. One who had frequently been in prison before for short terms, said—"Now I've had the good luck to get six months." A German criminal, who had just been released from prison, attempted rape. He received a sentence of eight years' imprisonment. He rose, thanked the court for the sentence, regretting, however, that it was not for a longer period, and adding that he had only committed the offence as an agreeable way of returning

¹ "Cu dici male di la Vicaria
Cei farrissi la faccia feddi-feddi.
Cu dici cà la carcere castia
Comu v' ingannati, puvireddi!"

² "Qua sol trovi i fratelli e qua gli amici,
Danari, ben mangiare e allegra pace;
Fuori sei sempre in mezzo ai tuoi nemici;
Se non puoi lavorai muori di fame."

to prison, where alone he found pleasant society and a life free from care. Manduca speaks of a man, advanced in years, who had just completed a long term of hard labour, and finding himself without means of subsistence, killed without any cause an old friend of his childhood. Bretignères de Courtelles found that 17 out of 115 prisoners entered prison in order to restore their health.

The habitual criminal who has grown accustomed to prison life cares for no other, and is suited for no other. "I have seen men," said Lauvergne, "almost dying from home-sickness because they must soon leave the prison." Jules Vallès spoke of *l'air vénérable* of the old convict; Émile Gautier calls it *l'air reposé*. Prison, he adds, is a kind of nirvana, and he tells of an old convict who possessed in a high degree this *air vénérable*, closely resembling Thiers, who, at the end of five years' sentence passed at Clairvaux, wrote as follows to the director:—"Sir, you know me. You know who I am, what I am worth, and what services I can render you. Now I am about to be thrown up again into the world, where I shall not know what to do. As soon as I have consumed my allowance in having a good time I shall immediately get myself arrested. May I beg of you to have the extreme kindness, as soon as I am again condemned to several years' imprisonment, to claim me for Clairvaux? I will inform you as to time and place, and in the meanwhile kindly reserve my place. Neither you nor I will have to repent of this agreement." That letter, more pathetic than amusing, is the logical outcome of our prison system quite as much as of our social system.

The haphazard fashion in which the period of a

prisoner's detention is fixed on beforehand is quite in harmony with the unsatisfactory character of the results obtained. It is well known that the criminal courts are prevented from awarding any sentence between two years, the longest period of imprisonment, and five years, the shortest legal sentence of penal servitude. Yet, as the Directors of Convict Prisons point out, "now that penal servitude is always carried out in prisons at home, there is no fundamental distinction between the two classes of punishment." On the 31st of March 1888 there were in English convict prisons 6970 persons. Of these, 3034 were undergoing penal servitude for 5 years, the lowest term permitted by law; in the case of one solitary individual the exact period of $6\frac{1}{2}$ years was required, while 1387 needed 7 years of prison treatment. Only 6 persons had been guilty of an iniquity equal to 9 years' penal, but no fewer than 1022 had committed an offence equivalent to 10 years' penal servitude, while 1 person only in England, having managed to just surpass this sum of iniquity, was in for 11 years. There were 240 in for 20 years, but only 3 for 21 years, and to 1 individual had been meted out exactly 29 years. It would be interesting to know by what delicate and complicated considerations this precise sum of guiltiness was reached. If we turn to the statistics of the United States at the same period we shall find the same peculiarities, though the variations in the periods doled out to long-term prisoners are spread over a wider field; they begin at 1 year, and include 18 for 50 years, and 82 for 99 years. "The favourite sentence," as Mr. Wines remarks, "seems to be two years; then five, then three, then one, then four, then ten. There is throughout a tendency apparent to

choose sentences, the numbers representing which terminate in the figure five or a cypher.”¹ In England the decimal unit is held in chief favour by judges, whether or not they realise what it may mean to the man who afterwards thus tells his experience:—“There on my cell wall was the card; it bore my name and my sentence—20 years. No wife to cheer, no children to prattle at my knee; 20 years! O God! will it ever end? 20 years,—240 months,—1040 weeks; oh, this dread future!” The sentence may be just or not, but, whether he will or not, the judge must fix on some definite term, with such results as we see. When Pantagrue arrived at Myrelingues, he found that Judge Bridoye, after carefully considering all the facts of a case, was accustomed to decide it by means of dice; and Pantagrue fully admitted the humility, piety, and impartiality of this method. If our judges, before pronouncing sentence, were first to determine the years to be awarded by a solemn casting of dice, the result might be as good as those reached by the not very dissimilar system now adopted. “Are prisons necessary?” asks Prince Krapotkine, and the question has been variously and timidly echoed in modified forms. Necessary or not, the institution is still so deeply rooted in civilised societies that it is

¹ *American Prisons*, by the Rev. F. H. Wines, the able secretary of the National Prison Association. A great amount of valuable information is compressed into this little pamphlet. Mr. Wines has endeavoured to ascertain if the variation in usual length of sentence in different states has any relation with amount of crime in that state. He was not able to find any connection. “Apparently, the length of jail sentences pronounced by the court has no effect either to increase or to diminish crime.” If this is so, there arises, as he remarks, the question, “What useful purpose do our jails subserv?”

idle yet to talk of overturning it. In spite of its acknowledged inutility we are content to pay very large sums in maintaining it, and no other method of treatment could be suddenly substituted. In England in 1889 there were 6405 persons undergoing sentence of penal servitude; in the United States there were recently 31,000 long-term prisoners; the various species of prisons in Italy contain some 70,000 persons, including 5000 incarcerated for life; in Germany, during six years, according to Professor Liszt, no fewer than 10,000,000 persons are imprisoned or fined. It is clearly idle to talk yet of the abolition of so flourishing an institution: can we give it real social utility?

The key to the failure of the prison, and a chief clue in its reform, lies in the system of administering definite and predetermined sentences by judges who, being ignorant of the nature of the individual before them, and therefore of the effect of the sentence upon him, and of its justice, are really incompetent to judge. Enough has been said of long sentences, the justice of which, it is obvious, must be quite a matter of chance. But the short-term imprisonments reveal quite as clearly the inadequacy of the system. The newspapers constantly tell of old offenders who have been in prison for over a hundred short periods. In a recent report of the Prisons Board of Ireland, the case of a woman is mentioned who was committed to Grangegorman prison thirty-four times during 1888, and never received a sentence for a larger term than fourteen days. This woman had been committed 146 times in previous years, so that she has undergone in all 180 imprisonments.

Society must say, in effect, to the individual who

violates its social instincts: So long as you act in a flagrantly anti-social manner, I shall exercise pressure on you, and restrain, more or less, the exercise of your freedom. I will give you a helping hand, because the sooner you begin to act socially the better it will be for both of us. I shall be glad to leave you alone, and the sooner the better; but so long as I see that you are a dangerous person, I shall not entirely leave my hold on you.

That is the only attitude towards the criminal which is at once safe, reasonable, and humane. If, holding this lamp, we turn to our prison, we see at once how incompatible with such an attitude is the system of determining beforehand the exact period of the delinquent's detention. Many a man imprisoned for life, to his own misery, the ruin of his family, and the cost of the State, might with absolute safety to the community be liberated to-day; it is unnecessary to speak further of the thousands for whom society, inside or outside prison, has done nothing, and whom it liberates, with full knowledge that they proceed at once to prey upon itself. The great fault of our prison system is its arbitrary character. It is a huge machine working by an automatic routine. The immense practical importance of criminal anthropology lies in this: that it enables us to discriminate between criminal and criminal, and to apply to each individual case its appropriate treatment.

The first reform necessary is the total abolition of the definite and predetermined sentence. The indefinite sentence is no longer new, either in principle or practice; all that is needed is its systematic extension. It has been adopted by several of the American states, such as Massachusetts, Ohio,

Pennsylvania, and Kansas, and it was introduced at the famous state reformatory of New York at Elmira, by an Act passed in 1877. This Act took from the courts the power of definitely fixing the period of confinement in prisons until, in the opinion of the managers of the Reformatory, they may be let out on parole for a probationary period of six months. No imprisonment was to exceed the maximum term provided by law for the offence for which the prisoner was convicted. Several thousand criminals have passed through Elmira, and only a small percentage prove recidivists. Before a prisoner is paroled a suitable situation is, if possible, arranged for him. To an Englishman, Frederick Hill, belongs the honour of first suggesting this fruitful reform, the indeterminate sentence, and his brother, Matthew Devonport Hill, vigorously supported the principle. In 1880 Garofalo—independently, it appears—advocated indefinite imprisonment in a pamphlet entitled *Criterio positiva della penalità*, published at Naples, and in his great work, *La Criminologie*, he wisely and consistently advocates the abolition of the definite sentence of imprisonment. In Germany it was advocated in 1880 by Dr. Kraepelin, a well-known authority on these matters (*Die Abschaffung des Strafmasses*. Leipzig), and in 1882 Professor von Liszt, of Marburg, supported it with the weight of his authority. This fruitful reform, which sprang up almost at the same time, and with apparent spontaneity among the Anglo-Saxon, Latin, and Teutonic races, although of such recent growth, needs little advocacy. It is so eminently reasonable that to state it seems sufficient to ensure its acceptance. When its advantages are generally known and realised it will undoubtedly spread in the same way

that it has already begun to spread in the United States.

While the indeterminate sentence is an absolutely essential reform, if our prison system is to be redeemed from the charges that now weigh so heavily upon it, it is still only a preliminary step.

One of the first and most obvious consequences is the necessity of reorganising—or, rather, of organising—the prison staff. It is unnecessary to show here, for it has often enough been shown by those who are familiar with the inside of a prison, that practically the prisoner is always at the mercy of the warder. The philanthropic head of the department, at a distance, must always count for less than the warder, philanthropic or otherwise, on the spot. Whatever educative and socialising influences the prison may possess must pass chiefly through the hands of the warders with whom the prisoner comes chiefly in contact. It is not necessary to investigate the character and conduct of the average warder. Those who appoint him and are satisfied with him are the responsible parties. It is enough to say that the prison warder of to-day is about as well fitted for the treatment of criminality as the hospital nurse of a century ago was fitted for the treatment of disease. Every one now recognises the immense importance for the inmate of a hospital of good nursing by a trained nurse; the doctor himself is the first to proclaim the essential nature of skilful and intelligent nursing. Yet the criminal, in all his manifold variations, with his ruses, his instinctive untruthfulness, his sudden impulses, his curiously tender points, is just as difficult to understand and to manage as the hospital patient, and unless he is

understood and managed there is no hope of socialising him. In Italy, France, Belgium, and Switzerland there are, I believe, institutions for the training of prison attendants, but as yet they have been of little effect, as they have not apparently been conducted in connection with the prison, nor on a scientific basis. Their establishment is a pressing necessity; no person should be appointed to any position involving the care of criminals who has not been qualified by training in such a school. He would here become acquainted with the peculiarities of the various classes of criminals; he would learn to work with them and to instruct them; and, not least, he would learn to rate at its proper value the difficult and important profession on which he was entering. It is this sense of a noble social function, full of privileges as well as responsibilities, which has raised nursing to its present high position and has brought into the ranks of nurses so large a leaven of capable and refined women.

At the same time the education of the criminal need not be entirely in the hands of officers the greater part of whose time is passed within the prison. There is considerable force in the remark of Dr. Wey, the able physician of the Elmira Reformatory, concerning the advantage of the prisoner having highly skilled teachers, fresh from the outside world and mingling daily in the affairs of men. The barrier which has, in most civilised countries, been set up between the criminal and the outside world must be to some extent broken down. This is necessary in the interests of both parties. The criminal cannot be too carefully secluded from his fellow-criminals, neither can he have too much of outside socialising

influence, if he is to be won back from the anti-social to the social world. In some of the colonies, it is said, good results have come of voluntary visiting. It is necessary, however, that this should be judiciously regulated so as to exclude fanatical, inexperienced, and merely curious persons. Mr. Tallack tells us some amusing stories concerning the results of allowing ignorant and foolish visitors. Thus a gentleman, by talking of hell-fire, succeeded in so thoroughly exasperating a prisoner that the latter seized him, and exclaiming, "I have hell enough here already without you bringing me more of it," would have administered summary chastisement had not a warder appeared. It is obvious that the more we restrict the intercourse of criminals in prison between themselves the more necessary it becomes to supplement the limited staff by assistance from without, which, while carefully chosen, must be chiefly voluntary. On the other hand, if we are to learn to know the criminal thoroughly, so as to learn at once how to treat him and how to protect ourselves from him, we must have a certain amount of access. "The time has now come," as Dr. Maudsley has well said, "when we ought to use our prisons as we do our hospitals, not for the care and treatment of their inmates, but for the advancement of knowledge and the improvement of man's estate."¹ And M. Tarde, speaking, as a *juge d'instruction*, from a different point of view, insists in his well-known work, *La Criminalité Comparée*, on the need of every law student completing his course by an obligatory attendance of six months at the *Clinique Criminelle* of a prison.

¹ "Remarks on Crime and Criminals," *Journal of Mental Science*, July 1888.

When we have caught our criminal we put him at once into solitary confinement. If rigidly carried out this plan has the advantage of secluding the criminal from his fellows. Regarded as a rational method of treatment, cellular confinement is a curious monument of human perversity. That it should have been established shows the absolute ignorance of criminal nature which existed at the time; that it should still persist shows the present necessity for a widespread popular knowledge of these matters. It may be possible to learn to ride on a wooden horse, or to swim on a table, but the solitary cell does not provide even a wooden substitute for the harmonising influences of honest society. To suppose that cellular confinement will tend to make the criminal a reasonable human being is as rational as to suppose that it will tend to make him a soldier or a sailor, a doctor or a clergyman. The mistake here is the old one that has vitiated so much of human action where the criminal is concerned—the mistake, that is, of supposing that at all points he is an average human being. Solitary confinement on a refined and cultured human being may produce a deep and lasting impression; a period of solitude, indeed, is for every intellectual person of immense value in helping him to know himself; though even here, if compulsory and unbroken, it can scarcely be without demoralising effect. But the case is quite different when we turn to the vacuous-minded, erratic, and animal person who is usually the criminal. Solitude produces in him, as Professor Prins remarks, no intellectual activity, and no searching of conscience; it serves merely to deepen his mental vacuity and to deliver him over to unnatural indulgence in the one animal

appetite of which he cannot be deprived.¹ Professor Prins points out, as does Prince Krapotkine, that the cell excludes all the bracing influences of struggle; the morality of the cell is submission, punctuality, quietness, politeness to warders. A moral life shut up in such a frame has nothing in common with social morality. Beltrani-Scalia, formerly Inspector-General of Prisons in Italy, is of the same opinion, and remarks that "the cellular system looks upon man as a brother of La Trappe."

Dr. Wey, of Elmira, states the rational method of treatment when he remarks—"Education means occupation, either mental or physical. The time of the convict should be so employed in his shop-work and school duties as to leave him no leisure moments in which to revive the past, and live over again in memory his criminal days or plan for the future; but each hour should bring to him its employments and engross his attention till the time for sleep."²

The experiments in the treatment of the criminal which are being carried on at Elmira are probably of more wide-reaching significance than any at present carried on elsewhere. It is worth while to consider them somewhat in detail. I select an experience carried on during 1886 and recorded by Dr. Wey, who had charge of it. On June 5th, 1886, Dr. Wey

¹ It is unnecessary to consider here the relation of solitary confinement to insanity. This is still somewhat of a vexed question. The difficulty lies in the fact that the prisoner is frequently already predisposed to insanity. Everything depends on how the isolation is carried out. There is no question that cellular confinement, if sufficiently prolonged, leads to insanity. There is a very extensive literature dealing with this subject.

² H. D. Wey, *Physical and Industrial Training of Criminals*, p. 55. New York, 1888.

selected eleven dullards between the ages of nineteen and twenty-nine. For a period of one to two years previously these men had made no progress. "In physiognomy they presented features indicative of criminal tendencies. Not one had learned a trade, but all had made a precarious living as common labourers, tramps, hostlers, and street-loafers. One was convicted for assault in the first degree; five for burglary in the third degree; one for grand larceny in the first degree; three for grand larceny in the second degree; one for rape, and one for attempted rape. The environment of most of the men previous to conviction was bad, many of them confessing to have had intemperate parents, while one told of an insane, and another of an epileptic mother." All however were well nourished, and their functions, save that of the skin (five had acne and one ichthyosis), well performed. "An idea of their mental attainments can be formed from the fact that one could neither read nor write; one barely do either; four understood the successive steps necessary to work an example in long division, but never could obtain the correct answer; while the balance came to grief upon the shoals of rudimentary arithmetic from notation to simple division. Their stock of information was surprisingly small, being generally limited to a slight knowledge of the things they liked to eat and the work they preferred to do."

The treatment adopted included a special dietary, bathing, massage, gymnastics, and a continuation of the usual school-work. The daily industries of the shop, etc., were suspended.

The food was varied each day, and was sufficient in quantity without being excessive; it was weighed

out to each, and provided at a common table, instead of, as usual, in the cells, in unrestricted quantity. The experience at Elmira shows that better results are obtained when the amount of food is restricted than when it is unlimited in quantity. Dr. Wey is strongly in favour of a diet consisting chiefly of milk and bread and butter.

The bathing and massage formed a very important part of the treatment. The routine, after several trials, resolved itself into three baths a week—*i.e.*, one tub and two vapour baths one week, followed the next week by two tub baths and one vapour. "The tub bath consisted in placing a man in a tub of water heated to about 100° F., and leaving him there to rub and soap himself for fifteen minutes or longer. From the tub he was placed upon a marble slab, where he was drenched with hot and cold water and sponged. After this the body was spatted until the skin was in a glow, the muscles pinched and kneaded, passive motions of the joints employed, followed by a brisk rubbing with a coarse wash-towel or Turkish bathing mitten, all this being done by a professional trainer, who was available at the time. Being obliged to make use of the facilities at hand, the vapour bath was the moist instead of the dry or heated air, and consisted of turning steam into a room, and maintaining an atmosphere of 115° F." This was followed by massage as before. After the bath the men usually slept until dinner time.

After dinner they were put through two hours or more of active physical exercise. In the beginning this consisted of the drill employed in the case of raw recruits, supplemented by dumb-bell exercises.

At first they were an awkward squad, slow to comprehend an order and deliberate in its execution. It was some weeks before they were able to march in line and to keep step.

On November 7th the class was discontinued, and the men were assigned to various shops and employments.

The results of this treatment were in every respect remarkable. "As they slowly advanced in their studies an increased mental activity was noted, and the workings of the mind were less forced and laborious than at the beginning. In mental arithmetic they made progress, and were able, with comparative ease and rapidity, to add three or four single numbers. "The drill and discipline they were subjected to wrought an improvement in their physical condition. The baths and stimulation of the cutaneous system brought the skin to the highest degree of functional activity, overcoming the integumentary disorders of five noted in the beginning. The daily drill and dumb-bell exercises hardened and developed muscles that previously were soft and flabby, and the entire muscular system acquired firmness and power. The setting-up drill improved the carriage and conferred a rapidity of action not before indulged in. The aimless shuffling gait gave way to a carriage inspired by elastic muscles and supple joints. The faces parted with the dull and stolid look they had in the beginning, assuming a more intelligent expression, while the eye gained a brightness and clearness that before was conspicuous by its absence. With physical culture and improvement there came a mental awakening, a cerebral activity never before manifested in their prison life. The purely animal man with

his ox-like characteristics seemed to recede before the intellectual. Their progress in school-work was not steadily onward, but intermittently progressive." Whereas in the six months before the class was formed the men had obtained less than $\frac{1}{4}$ of a mark (for demeanour, labour, and school) per man each month, during the six months that followed the breaking-up of the class the number of marks earned was $\frac{7}{8}$ per month per man. There was a simultaneous and rapid improvement, moral, physical, and intellectual—an improvement that was common to all, although more pronounced in some, and which was very encouraging, considering the material of which the class was formed. A year later several had been released on parole, and were demonstrating their ability to maintain themselves honestly, while only two of them, still in prison, were not doing well.¹

The results of this and similar experiments have been so satisfactory that a fully-equipped gymnasium and Turkish bath are now in course of erection at Elmira. "Here," Dr. Wey tells me, "we propose to treat those who are in arrears both in body and mind, and prepare them for work and study in the schools of letters and trades. By this plan it is possible to impress later the mind to a greater degree than could be done by taking up its cultivation at the time the man comes to us."

In 1888, when the Yates bill became law, the productive prison industries of Elmira had to be suspended. "Within less than a month," writes Dr.

¹ See Dr. Wey's *Physical and Industrial Training of Criminals*, a valuable little work, in which all the details of this and similar experiences are given with care and fulness.

Wey, "from the passage of the bill, all the men who previously were employed in productive industries (industries yielding revenue) were being drilled in military evolutions and tactics. In other words, idleness was avoided by turning the prison into a military school. The men received from four to six hours of drill daily, which was sufficient to prevent them from rusting in their cells. By this means the health of the men was maintained, and opportunity was afforded for increasing the scope of school-work, trades, and letters. A drum corps was formed, and instruction given others in instrumental music, with the sequence that to-day [29th October 1889] we have a drum and fife corps of about twenty, and a band composed of twenty or more wind instruments.¹ Two afternoons a week are devoted to military work, the balance being devoted to technical instruction. The effect of the military drill and discipline was so good in the way of a health measure and in improving the carriage of the men that I doubt if it will soon be discontinued. It was another phase of the application of physical training." The report of the able superintendent of Elmira, Mr. Z. R. Brockway, fully confirms these conclusions.

Just now the industries of New York prisons are partially re-established. The Fassett bill, passed in the spring of 1889, enabled various industries to be apportioned to the various prisons, one prison not to compete with another, and the number of men engaged in any one industry in a prison not to exceed

¹ Sufficient attention does not appear to have been given to music in prisons. It is a civilising influence to which the criminal is often very sensitive. An able administrator at the convict prison at Toulon long since recognised this with happy results.

five per cent. of the total number engaged in the same industry throughout the entire state. The question of productive prison industry is still, however, far from settled.

The physical and industrial education is not the whole of the training given at Elmira. A third, and scarcely less important, factor is the moral and æsthetic training. There is no official chaplain at Elmira. "There is," says Mr. Brockway, "in the minds of men, as observed during imprisonment, an unexplained but actual repugnance to professional, official, and stereotyped religious phrases, while for the noble character of the practical Christian, in common affairs, unheralded and unnamed, there is among prisoners a quick and favourable response." Although there are no resident chaplains, various ministers and others—Protestant, Catholic, and Jewish—attend frequently, and hold services, lectures, classes, etc. The class in Practical Morality, originated a few years ago by Professor Collin, has been judiciously managed, and has proved a valuable feature in the work. The æsthetic culture has been chiefly carried on by means of the systematic study of literature. The results in this department have been unexpectedly encouraging. At first the men met the attempt with sullen stupidity as a new task imposed upon them. Gradually this impression was conquered; the men slowly began to acquire an eager appetite for Chaucer and Shakespeare, for Emerson and Browning. The applications for admission to the English Literature class became very numerous, and at one time there was so great a run on Jowett's Plato at the Reformatory library that a special regulation had to be made concerning its issue. It is satisfactory to learn that this taste has, in

many cases at all events, survived incarceration, as a wholesome recreation for leisure hours. "In my work with the class in English Literature," writes the instructor in that department, Mr. Douglas, "I proceed on the basis that the earnest obligatory study—let me emphasise the word *study*—of mental and moral beauty develops or creates the mental and moral faculty of appreciation; and, furthermore, that mental and moral habits may be formed just as certainly as physical habits, and without any more conscious co-operation of the individual than is required in physical practice." It has been mentioned already that a newspaper, the *Summary*, is published within the Reformatory; it contains both local and general news, as well as passages from good authors; the inmates contribute to this paper, and at one time it was ably edited by a prisoner. It has been said, with justice, that the *Summary* compares favourably with the average American newspaper published outside prison walls.

The prison, as Professor Collin remarks, must be "a moral hospital." As Sir Thomas More said long ago, the end of punishment is "nothing else but the destruction of vices and the saving of men." Mr. Brockway, and those who are working with him, have clearly realised this; the training they give is rational and scientific, and hence its success. During the thirteen years from the opening of the Reformatory to the end of 1889, nearly 4000 prisoners were received at Elmira on an indefinite sentence. Over 2300 of these were paroled, and of these 15.2 per cent. only are estimated as having "probably returned to criminal practices and contact."

Elmira is at present the most promising direction in which we can turn for light on the treatment of the criminal. Its wholesome and improving discipline stands in favourable contrast to the lax indulgence and shameful neglect of the criminal which coexist generally in the United States. The system is not perfect, and it has been unfavourably reported on by some observers. It is undoubtedly a defect that the prisoner must be released, whatever his condition, at the expiring of his legal maximum sentence ; this is, however, an inevitable compromise. Notwithstanding all defects, Elmira is full of encouragement, for it shows us a community awakening to an active sense of its duties, so long forgotten, towards those weaker members who, if neglected, become so dangerous to themselves and to others. "It is an interesting sight," remarks Dr. Wey, "when the school is in session, to see a group of men, felons every one, gathered about an instructor, intently listening as he makes clear some step in the work in hand not fully or clearly understood, going through the various processes, one by one, and explaining until the dullest mind can comprehend. It is not expected that, with the comparatively limited time for instruction, these men will become skilled mechanics. But rather the idea has been to train the hand and eye, and teach the use of tools, to awaken an ambition to pursue a lawful calling, and appreciate the value of a practical knowledge of a trade, so that when the time shall come that they pass beyond the prison doors, and again come into contact with society, they will not be handicapped by the same conditions that formerly operated to their detriment ; but with increased resources of mind and body will be enabled to occupy a higher and more

self-respecting place.”¹ The example of Elmira is spreading in America; in Ohio, for instance, youthful criminals are being brought up on the broad basis of manual training, and among the branches of industry taught are farming, fruit-growing, carpentry, shoe-making, painting, tailoring, baking, laundring, house-work, vocal and band music, telegraphy and printing. On the continent of Europe—especially, perhaps, in Germany—the system is beginning to attract attention; and while it would be too sanguine to conclude that Elmira has solved the question of the treatment of the criminal, there can be no doubt as to the value of its contribution to this difficult problem.²

¹ For some further information concerning Elmira, see Appendix E.

² It is perhaps worth noting that the highly intelligent and eclectic administration of Japan have adopted a very similar system, described in an interesting letter by Mr. H. Norman, the travelling commissioner of the *Pall Mall Gazette*, under the title of “An Ideal Prison” (*Pall Mall Gazette*, 18th October 1888):—“Two days previously I had visited the house of the most famous maker in Japan of the exquisite *cloisonné* ware—the enamel in inlaid metal work upon copper—who rivals in everlasting materials the brush of Turner with his pigments and the pencil of Alma Tadema with his strips of metal. And I had stood for an hour behind him and his pupils, marvelling that the human eye could become so accurate and the human hand so steady and the human heart so patient. Yet I give my word that here in the prison at Ishikawa sat not six but sixty men, common thieves and burglars and peacebreakers, who knew no more about *cloisonné* before they were sentenced than a Hindoo knows about skates, doing just the same thing—cutting by eye-measurement only the tiny strips of copper to make the outline of a bird’s beak or the shading of his wing or the articulations of his toe, sticking these upon the rounded surface of the copper vase, filling up the interstices with pigment, coat upon coat, and firing and filing and polishing it until the finished work was so true and so delicate and so beautiful that nothing except an occasional greater dignity and breadth of design marked the art of the freeman from that of the convict. *C’était à ne pas y croire*—one simply stood and refused to believe one’s eyes. Fancy the attempt to teach such a thing at Pentonville or Dartmoor or Sing-Sing! When our criminal

It can scarcely be necessary to say that in any effectual treatment flogging can have no part. It would not have been necessary to say a word on this point if within very recent times an English Parliament had not been found so lamentably ignorant of historic evolution in this matter, of the results of experience, and of rational principles, as to pass a Corporal Punishment Bill. The objections to flogging are by no means of a sentimental character. We have seen that the instinctive criminal, although often cowardly enough, is by no means peculiarly sensitive to pain. Flogging is objectionable because it is

reaches his prison home in Tōkyō he is taught to do that at which the limit of his natural faculties is reached. If he can make *cloisonné*, well and good; if not, perhaps he can carve wood or make pottery; if not these, then he can make fans or umbrellas or basket work; if he is not up to any of these, then he can make paper or set type or cast brass or do carpentering; if the limit is still too high for him, down he goes to the rice-mill, and see-saws all day long upon a balanced beam, first raising the stone-weighted end and then letting it down with a great flop into a mortar of rice. But if he cannot even accomplish this poor task regularly, he is given a hammer and left to break stones under a shed with the twenty-nine other men out of 2000 who could not learn anything else." And in regard to punishment Mr. Norman observes:—"On leaving the dormitories we passed a small, isolated square erection, beaked and gabled like a little temple. The door was solemnly unlocked and flung back, and I was motioned to enter. It was the punishment cell, another spotless wooden box, well ventilated, but perfectly dark, and with walls so thick as to render it practically silent. 'How many prisoners have been in it during the last month?' I asked. The director summoned the chief warder and repeated my question to him. '*Itori mo gozaimasan*—none whatever,' was the reply. 'What other punishments have you?' 'None whatever.' 'No flogging?' When this question was translated the director and the little group of officials all laughed together at the bare idea. I could not help wondering whether there was another prison in the world with no method of punishment for 2000 criminals except one dark cell, and that not used for a month. And the recollection of the filthy and suffocating sty used as a punishment cell in the city prison of San Francisco came upon me like a nausea."

ineffectual (as was shown long since), and because it brutalises and degrades those on whom it is inflicted, those who inflict it, and those who come within the radius of its influence. These facts are well known to those who have more than a superficial acquaintance with the insides of prisons, and should have been ascertained by those individuals who presume to legislate, before they voted in the face of reason and experience. To flog a man for whatever offence, however brutal, is to sanction his brutality. Capital punishment, which is brutal like flogging, is comparatively free from the brutalising influence of flogging. The method of flogging is so obviously unfit to humanise and socialise any human being, that the impulse to inflict it can only spring from a relic of savagery of the same kind as that which inspires the criminal, without his excuse of a morbid or defective organisation. It can only be said in excuse of those who advocate it that they have no experience in the matter. Those who have witnessed it have, however, recorded their experiences. Thus, to mention one instance, Sir Robert Rawlinson, after giving a vivid account of flogging as he has himself seen and heard it, adds:—"I will strive in my mind to judge those members of Parliament who now advocate the revival of corporal punishment charitably, by considering that they have never seen it as I have feebly attempted to describe it: the degraded man lashed to the triangles, the white clean skin of an Englishman exposed to the cool morning air, to be scored, cut up, and scarred into a pulpy, blood-smear'd lump of living human flesh. Take the vision away: it is too hideous even to remember." Even if there were less evidence as to the ineffectual

character of flogging as a deterrent, and to its bad influence on the *morale* of a prison, we cannot afford to flog any human being. It is well to meditate on the words of Dostoieffsky, who was familiar with the various forms of flogging, and has recorded his convictions in his *Recollections of the Dead-House*. After giving his opinion that "the rods are the most terrible punishment in use among us," and speaking of the demoralising influence of flogging on those who inflict it, he concludes:—"Let me add that the possibility of such a licence acts contagiously on the whole of society: such a power is seductive. A society which regards these things with an indifferent eye is already infected to the bone. The right accorded to a man to punish his fellows corporally is one of the sores of our society; it is the surest method of annihilating the spirit of citizenship." Flogging has not yet reached among us the extension which it then had in Russia and in Siberia, but its character and influence remain the same, and the warning seems to be still needed.

With the indeterminate sentence must always be associated conditional liberation—*i.e.*, liberation by ticket-of-leave or on parole, liable to revocation in case of misbehaviour. It is not, however, necessary to insist on this, as the principle has long been practically recognised in England and elsewhere. It exists in Belgium, some of the American states, Hungary, Saxony, Switzerland, the Grand Duchy of Baden, etc.

A very desirable accompaniment to any system of dealing with criminals is a sound system for their registration and recognition. The method originated by M. Alphonse Bertillon is now adopted in France,

Russia, Japan, Spain, Italy, the Argentine Republic, and some parts of Germany, and it is being adopted in several of the United States. By this method the height, the length and width of head, the measurements of left foot, of outstretched arms, of trunk when seated, of fourth finger of left hand, of left arm, length of ear, colour of eyes, and any marks are recorded, together with the photograph, profile and full face. The method of classifying the photographs in its simplest form was thus generally described by M. A. Bertillon a few years ago (*Revue Politique et Littéraire*, 28 April 1883). Suppose we have 80,000 photographs. They are first divided according to the sex, the men on one side, the women on the other. These latter do not reach 20,000. The 60,000 men who remain are divided into three classes according to height; the short numbering about 20,000, the middle-sized numbering about 20,000, and the tall 20,000. Each of these divisions is divided into three series according to length of head. These new divisions, to the number of nine, contain rather more than 6000 each. Each of these sub-divisions is then divided into three groups according to length of foot, each group containing about 2000 photographs. Each of these groups is again sub-divided into three, according to length of outstretched arms (*grande envergure*). Each of these groups contains about 600, and they are further sub-divided with reference to age, colour of eyes, and length of middle finger. Thus by means of four new anthropological characters (sex, height, age, and colour of eyes have long been noted) 80,000 photos can be easily divided into groups of 50. The measurements can be taken in two or three minutes, and require no

special intelligence. When an individual stands as regards height at the border of two classes, he is put into both.

Thrusting a man into prison, when everything is said, is a measure only to be taken with the utmost circumspection, after consideration of the individual's antecedents, and a clear conception of the ends to be attained by imprisoning him. To relegate almost indiscriminately to prison the miscellaneous army that file through a police court is an ignorant and dangerous policy; there is little hope of good result, and a considerable chance of evil result. If the period is for a few weeks only no permanent beneficial end can be anticipated, even under the best of conditions; while during so short a period no useful work can be commenced, so that there is a direct incitement to idleness. When the prison has been decided on, the period of detention must be indefinite, according to the results attained in the opinion of those competent officers specially appointed to form such decisions, and the liberation will be conditional.

It is a wholesome sign of progress that in so many European countries substitutes for the prison, in the case of minor offenders (*i.e.*, occasional criminals), are being anxiously sought and gradually adopted. One cannot avoid seeing how many individuals are unnecessarily condemned even to penal servitude. In our convict prisons there exists a very excellent plan, entirely in accordance with rational principles, of forming what is called a "Star" class of convicts—that is, a "special class of those not versed in crime." The authorities "cannot speak too highly of the general tone and behaviour" of these men, their

“decidedly good disposition,” “keen anxiety to gain a knowledge of some sort of trade,” sense of “the moral degradation in which they have placed themselves,” etc. Their industry and freedom from prison offences are so marked, “and the special reports on the subject have been so uniformly to the same effect, that it is no longer necessary to call for such reports.” This is all very gratifying, but it is not at all clear that these men should have been convicts at all. There are other and more satisfactory methods of dealing with such persons.

It is not possible here to do more than touch slightly on the various methods of dealing with occasional criminals. The one that approaches most nearly to imprisonment is the method of pronouncing suspended sentences of imprisonment to hang over the inculcated individual during a limited period, at the end of which period, if his behaviour is good, the sentence lapses. Imprisonment is thus, as Mr. Tallack remarks, commuted into liability to imprisonment. This plan, applied to minor offences, was adopted in Belgium in 1888, and is in use in some of the United States. In England the First Offenders' Act enables the magistrate to accept the prisoner's own recognisances to come up for judgment if called upon, but the law does not seem to be applied so frequently as is desirable. The old English system of recognisances, in which the guilty party deposits a sum of money, is an excellent guarantee to society against his recidivism, and is deserving of extension to all those cases to which it may prove adapted. This plan has been adopted in the United States and in Denmark. A very large proportion of small offenders can be dealt with adequately by means of a

fine. This should not be of too trifling a character when the offence has been frequently repeated, and the means of the offender are ample. Nor does it appear desirable that the offender should be allowed at will to choose between fine and imprisonment. The notion of reparation should be combined with the fine when possible, the offender, as Garofalo proposes, paying an indemnity to the injured person, and a fine to the community. With our abstract and impersonal method of dealing with crime, we are much too apt to forget the recompense that is due to the injured person. Féré has suggested that the State ought to undertake this reparation; the community, he argues, has failed in its duty of protecting one of its members, and it ought therefore to repair the injury which it has not known how to prevent. Crime being largely the result of social conditions, the damage it causes should be supported socially by the society which generated the individual. A more practical first step, however, seems to be a recognition that the criminal should be bound to repair the damage he had caused. This reparation should be on a very liberal scale, and with due regard to the anxiety or suffering inflicted on the injured party. When the offender is not in a position to pay money, there should, as Prins points out (and Sir Thomas More long before him), be suitable provision to enable him to give so many days of his labour to work out his penalty and reparation. In several European countries imprisonment for mendicity, vagabondage, and other minor offences, has been abolished, and compulsory work substituted: this is a reasonable change.

In the slightest cases of all, every end of social

protection should be attained by a formal "caution." The publicity which this involves is itself, under modern conditions of life, a sufficient safeguard.

The special and very numerous class of habitual drunkards must be dealt with by special methods. The method, if method it can be called, of treating such cases by a few days' imprisonment is glaringly ineffective. It is a waste of public time and money, as well as a danger to the individual himself and to society. Habitual inebriates can only be dealt with fairly when they are recognised as diseased persons, to be treated on rational principles, and to be saved, whether they will or not, from doing injury to society and to themselves. It is incomprehensible that in so drunken a country as England this question should not before now have had serious attention, instead of being left to voluntary agency. To leave habitual alcoholism and its results to voluntary agency is as reasonable as it would be to leave the care and control of the insane to voluntary agency. The case for the control and treatment of the inebriate is, indeed, considerably stronger than that for controlling the insane.

To sum up briefly the points in the treatment of the criminal which have been reviewed in this chapter:—

Capital punishment is disappearing. There is, however, no reason to hasten unduly its complete extinction, because lifelong imprisonment, under existing conditions, is frequently less humane, and is not of greater value for purposes of social protection.

The prison needs to be made a far more active and thorough instrument of social reformation than it is at present. Great circumspection must be shown in selecting the individual whom it is desirable to send

to prison, but when selected he must be retained until there is reasonable presumption that he will no longer be dangerous to society. In place of mere routine and surveillance, he must be subjected to intelligent and energetic treatment. While he should usually be guarded from contact with his fellow-prisoners, it is desirable, with due restrictions, to promote his intercourse with selected persons of the outside world. His conditional liberation should be delayed until he can be placed in some situation which will enable him to earn his own living. The plan of fixing beforehand the period of the prisoner's detention appears to have nothing to recommend it, and should be entirely abolished.

In dealing with occasional criminals whom it is not necessary or desirable to put into prison, liability to imprisonment should be substituted. The system of recognisances and of fines to the community, together with reparation to the injured individual, should be developed and extended to all cases to which it may suitably be applied. When the offender is unable to pay a pecuniary fine, he should not be imprisoned, but compelled to give his work.

The class of habitual drunkards requires special and compulsory treatment in special asylums.

CHAPTER VII.

CONCLUSIONS.

WE have now seen, in its main outlines, the present condition of this question of the nature and treatment of the criminal. We have seen that criminality is a natural phenomenon, to be studied gravely and carefully according to natural methods; and that by natural and reasonable methods alone can the problem of its elimination be faced with any chance of success.

A simple and obvious conclusion it seems. Yet it is a conclusion not even yet generally accepted, and which is only beginning to find expression in our social life. It is still quite usual to find that crime is regarded as an abstract matter, not to be treated seriously unless the criminal himself is ignored. On the other hand, when the criminal comes in for discussion it is merely as a subject for sensational excitement, or unwholesome curiosity, as a creature to be vituperated or glorified without measure.

The criminal has always been the hero, almost the saint, of the uncultured. That attitude of unbounded reverence for the lunatic, as for an inspired being, and unquestioning submission to his wildest acts which to-day can scarcely be found in Europe outside Turkey, has by no means died out where the criminal is concerned, even in the most civilised country. The same reverence or amazement that the educated feel

for the man of genius, the uneducated feel for the criminal.

The Romans gave the name of Hercules to great criminals after death, and dedicated a distinct cult to them. If we go back to a still more primitive phase of life as preserved in folk-lore, and still to some extent perpetuated, we find that all that belongs to an executed criminal brings luck. A finger or other small bone kept in the purse will preserve it from ever being empty. It also keeps away vermin, and protects a thief from his victim. Buried beneath the threshold it brings perpetual blessing, and to have a thief's thumb among his goods is an excellent thing for a shopkeeper. The people came for the Marquise de Brinvilliers's bones the day after her execution; they regarded her as a kind of saint, says Mme. de Sevigné. When at Breslau the old Rabenstein (the gallows) was broken down, a great trade was done by the workmen in the bones found beneath. Precious above all is the blood of a criminal; even a few drops on a rag are most costly. Such blood, when drunk, heals fevers and other diseases, just as the blood of gladiators was among the old Romans a cure for epilepsy. It must be drunk fresh, if possible warm. Bread dipped in this blood and eaten is good against the gout. The halter with which a criminal has been hanged has much power and brings luck. When it is struck three times on the threshold, the house is preserved from lightning. The same put into a beer cask with a criminal's thumb has an excellent influence on the beer. In Franconia the fat of criminals is sometimes inquired for at the druggist's, and a substance, so called, is handed over. When in Prussia executions took place in public, there was always

friction between the armed guards and the crowd of women, who at all costs pressed forward with spoons, cups, and dishes to catch some of the blood. At the execution of a murderer at Hanau in 1861, several men leapt on to the scaffold and drank the steaming blood. At the execution of two murderers in Berlin in 1864, the executioner's assistants dipped numbers of white handkerchiefs in the blood, and received two thalers for each. The bystanders even call upon the criminal for his most powerful intercession in Heaven. According to Pitré, there is still in Sicily a fetichistic adoration for the souls of the beheaded. The criminal is a person endowed with divine force, to be treated with awe and reverence, and whose blood and flesh have something of the old sacramental power of infusing the divine one's energy into the body of him who eats of it.¹

In a less crude form, and among persons who lay claim to a somewhat higher degree of culture, the same veneration has long existed and still exists. Appert, writing immediately after the execution of Lacenaire at Paris, says:—"His portraits were displayed on quays and boulevards. From all sides exquisite meats and delicate wines reached his cell,

Lacenaire.

¹ Wuttke, *Der deutsche Volksaberglaube der Gegenwart*, § 188 ff.; and Ulrich Jahn, "Ueber den Zauber mit Menschenblut und anderen Theilen des Menschlichen Körpers," in *Zeitschrift für Ethnologie*, 1888, Heft ii., p. 130.

while, two steps away, miserable creatures driven to crime by hunger ate the black and hard bread of the gaol. Every day some man of letters visited him, carefully noting his sarcasms, his phrases composed in drunkenness or studiously calculated for effect; women, young, beautiful, and elegantly attired, solicited the honour of being presented to him, and were in despair at his refusal; a noble countess, the mother of a family, addressed verses to him, and drew upon herself a reply at which no doubt she blushed. He himself mocked at the infatuation he excited. 'They come to me,' he said, 'as they would ask a ticket from M. Geoffroy Saint-Hilaire to see the elephants' den.'" When Cartouche was in prison he was visited by many distinguished ladies and overwhelmed by their attentions. The Abbé Crozes tells us that Tropmann, the brutal murderer, when in prison received a great number of letters from ladies, full of anxiety in regard to his spiritual welfare, and asking for the most minute details concerning him. Some of these letters were reproduced in the *Figaro*. I have not seen them, but Dr. Corre says: "Their perusal stupefies one; they witness, among women who have been well brought up, to an ill-defined obsession, of the nature of which they are even themselves unaware, and which perhaps had its origin in an unavowable sentiment of love, born of mystery and the unknown." It is not only women in whom this ancient worship of the criminal still survives. In a recent newspaper I read concerning a murderer: "One of the saddest sights we have ever witnessed was the prison van going along Waterloo Place at midnight under the beautiful moonlight with a great crowd running after it cheering loudly the poor wretch within—cheering that never

ceased till the van disappeared inside the prison gate. The crowd was composed chiefly of young men, many of them well dressed, and not a few accompanied by their sweethearts. The scene suggested a convoy by the students of a favourite singer rather than that by the youth of even the lowest class in Edinburgh of a brutal murderer of a harmless English gentleman." And, again, in another newspaper: "On Monday many visitors were in Seaham for Bank Holiday and the flower show. Those who visited the cavern where the girl is supposed to have been murdered were ten times more numerous than those who went to the flower show. Nearly all were strangers to the town, and had journeyed thither for the express purpose of viewing the scene of the tragedy. Many took a memento of some sort, either a chipping of rock, a pebble, or a stone from the cave. Some went so far as to take water from the pool where deceased was found, away with them in bottles."

It is well known that when a woman has murdered her husband it is by no means unusual for a number of letters to be sent to her, before the issue of the trial is known, containing offers of marriage.

It is not possible to regard the criminal as a hero or a saint after we have once seriously begun to study his nature. He is simply a feeble or distorted person to whom it has chanced—most often, perhaps, from lack of human help—to fall out of the social ranks. It is as unreasonable and as inhuman for a whole nation to become excited over him, and to crave for the minutest details concerning him, as we now deem it to expose the miseries of any other abnormal person—man of genius or idiot, leper or lunatic—to the general and unmerciful gaze. Not that any of

these may not be studied ; they must be studied, but not delivered over to unrestrained curiosities, sentimentalities, cruelties. No external force can change this attitude ; no censorship of newspapers will avail. Only the slow influences of education, and a rational knowledge of what criminality means, can effect a permanent change. But until this has been effected, one of the most fertile sources of crime, what has been well called the contagion of crime, will remain, as it is to-day, a danger in all civilised countries, a danger which is suggesting heroic remedies. The minute details of every horrible crime are to-day known at once by every child in remotest villages. The recital of it stirs up all the morbid sedimentary instincts in weak and ill-balanced natures ; and whenever a large community grows excited over a crime, that community becomes directly responsible for a whole crop of crimes, more especially among young persons and children.¹

We have, then, to reform our emotional attitude towards the criminal. On the other hand, we have yet something to do in reforming our rational attitude towards crime. "There are no crimes ; there are only criminals." That saying of Lacassagne's indicates the direction in which practical changes must develop. "All progress in penal jurisprudence," as Salillas well says, "lies in giving consideration to the man." The question of legal methods, criteria, and tribunals is one of considerable importance from this point of view, and it is one to which sufficient attention has

¹ The popular excitement over "Jack the Ripper," and the Crown Prince Rudolph of Austria, may be specially mentioned as having produced a large number of crimes. They are, however, by no means isolated examples.

not yet been given. It is unfortunate that, in this country at all events, there seems to be a tendency to antagonism or divergence between, on the one hand, the medical and scientific side and, on the other, the judicial and executive side in the treatment of the criminal.¹ Whether this divergence is due chiefly to the lawyers or to the doctors is not quite clear, but it is essential that it should come to an end. Both lawyers and doctors exist for the sake of society, and are the servants of society; society, in its own interests, must see to it that they agree quickly. But so long as society allows antiquated laws and methods to prevail, there must be disagreement—disagreement which is disastrous to social interests. We need, before everything else, an enlightened public opinion.

A question which is constantly arising, and constantly leading to direct divergence between the exponents of science and the exponents of law, is the question of insanity. Under existing conditions it is frequently a matter of some moment whether a criminal is insane or not. Now whether a man is insane or not is largely a matter of definition. Even with the best definition we cannot always be certain whether a given person comes within the definition, but it is still possible to have a bad definition and a good definition. The definition which lawyers in England are compelled to accept is of the former character. The ruling still relied on is that of the judges in the MacNaghten case, many

¹ It does not appear to be quite the same abroad. Some of those who are most convinced in their efforts to magnify the scientific and medico-legal elements in scientific procedure are lawyers; while medical men show no wish to encroach unduly on the legal aspects. This came out very clearly at the last International Congress of Criminal Anthropology.

years ago: "That to establish a defence on the ground of insanity, it must be clearly proved that at the time of committing the act the accused was labouring under such a defect of reason from disease of the mind as not to know the nature and quality of the act he was doing, or if he did know it, that he did not know he was doing what was wrong." That this metaphysical and unpractical test will not do has been clearly recognised by some of the most eminent lawyers, who are quite in agreement with medical men. "The test of insanity which commends itself to medical men," says Sir J. Crichton-Browne, "was never more clearly and succinctly expressed than by Lord Bramwell when in the Dove case he asked, 'Could he help it?' Could he help it? That is the real practical question at issue in any case in which the defence of insanity is set up."¹ It should be added that Lord Bramwell has not always been able to maintain this position. "It ought to be the law of England," says Mr. Justice Stephen, a very great authority, "that no act is a crime if the person who does it is at the time when it is done prevented by defective mental power, or by any disease affecting his mind, from controlling his conduct, unless the absence of the power of self-control has been produced by his own default." A reasonable doctrine to lay down, no doubt, and one which medical men generally would accept; but one asks oneself at once: How many persons guilty of serious crimes—the only class in regard to whom the question is of practical importance—are to be counted sane?

The point on which we must fix our attention, however, is that it should make so much difference

¹ "Responsibility and Disease," *Lancet*, 28th July 1888.

whether a criminal is insane or not. Our law is still in so semi-barbaric a condition that the grave interests of society and of the individual are made to hinge on a problem which must often be insoluble. Practically it cannot make the slightest difference whether the criminal is sane or insane. Sane or insane, he is still noxious to society, and society must be protected from him. Sane or insane, it is still our duty and our interest to treat him humanely, and to use all means in our power to render him capable of living a social life. Under any system, at once fairly humane and fairly rational, the question of insanity, while still of interest, can make little practical difference, either to society or to the criminal. It is unreasonable and anti-social to speak of insanity as a "defence." It is an explanation, but, from the social point of view, it is not a defence. Suppose we accept the definition of insanity which, as we have seen, is now widely accepted by medical men and favoured by many eminent lawyers, that insanity is a loss of self-control, the giving way to an irresistible impulse. It cannot be unknown to any one that self-control may be educated, that it may be weakened or strengthened by the circumstances of life. If we define insanity as a loss of self-control and accept that as a "defence," we are directly encouraging every form of vice and crime, because we are removing the strongest influence in the formation of self-control. When a "defence" of kleptomania was brought before an English judge in a case of theft he is said to have observed: "Yes, that is what I am sent here to cure." We need not hesitate to accept this conception of the function of the court, provided always that the treatment is scientific, effectual, and humane.

The fact that to-day it is not so, and that lawyers and doctors are helpless to make it so, is a glaring proof of the necessity which exists for society, in its own interests and in those of its weaker members, to take intelligent cognisance of these matters, and to pave the way for reasonable action. In the first chapter of this book I noted, without calling any special attention to it, the curiously divergent way in which somewhat similar cases were treated. One girl was treated kindly and sent to a clergyman's house: she "recovered." Little Marie Schneider was sent to prison for eight years, the years during which she will develop into a woman. What will she be fit for when she comes out at the age of twenty? She may come out a human tigress, or merely the crushed and helpless product of prison routine. In either case what intelligent principle guided the society that condemned her to spend those eight years in prison? The lad who killed his little sister was sent to penal servitude for ten years. What will he be good for when he comes out? "In any case," as Dr. Savage remarks, "the boy is pretty certain to end his days either as a lunatic or a confirmed criminal, and I fancy the best course has been taken to make him the latter. So society will suffer the more, and the boy himself will be none the better."

These problems are unknown to the law, but they are beginning to stir among the community. A girl of twelve not long since murdered a child of four, as she herself subsequently confessed, in much the same manner as Marie Schneider murdered Margarete Dietrich. The jury acquitted her. They acted in defiance of the evidence and of the law. It is clear that what they said to themselves was this: The law

will send this girl to prison for some ten or fifteen years. We do not believe in the advantage of that, and we prefer to deliver her from the law altogether. They were, as the judge said, a very merciful jury. But it is not by shuffling evasions of law that civilisation progresses. We need just and reasonable laws, not merciful juries. It is not to the advantage of society that young murderesses should wander at large, though it may very possibly be better than throwing them into the prison as at present constituted. The "merciful" jury, as in the south of Italy, becomes the hysterical and too often venial jury. We cannot be too grateful for the courage and honesty with which, as a rule, English juries and judges fulfil their functions; it is to this adherence to law that many intelligent foreign observers attribute the fact that criminality in England is in some respects less serious than one might be led to expect. If, however, this attitude is to be maintained, and we are to avoid the dangers of lying and cowardly verdicts, we must see to it that our law keeps pace with our knowledge and with our methods of social progress.

The institution of the jury is well rooted in England, and on the whole very efficient. There is not likely to be any agitation for some time to come for its abolition, as there has been in Italy and France and Switzerland. But there is at all events one modification in our criminal courts which is urgently required. It is entirely opposed to the interests of justice, and therefore of society, that the scientific conclusions in a case should be thrust into a partisan position. Experts will often differ as lawyers often differ, but the lawyer is not more competent to decide on the science of the expert than the expert is

competent to decide on the law of the lawyer. It is not for the interests of justice that one expert, representing perhaps only his own opinion, should weigh against another representing perhaps the general body of scientific opinion on that subject. It is not calculated for the ends of justice that the judge, however quick and intelligent, should have to pronounce on matters concerning which he can only speak as a layman, and necessarily falls into frequent errors of judgment. Special points involving special knowledge or skill must be submitted to a commission of experts, and the verdicts of the commission on these special points must be accepted by the court, though subject to an appeal to a supreme medico-legal tribunal. Some such method as this is now being widely demanded by intelligent opinion in the interests of justice. At the International Congress on Forensic Medicine, held in Paris in 1889, this tendency came out very clearly, and was formulated in the following proposition which the Congress adopted:—"To guarantee the interests of society and of the accused in all medico-legal investigations, at least two experts shall be employed. These shall be appointed by the judge." It is to be hoped, in the interests of justice, that the pressure of public opinion will hasten the adoption of this reasonable and moderate reform in criminal procedure.

Our courts of justice are still pervaded by the barbaric notion of the duel. We arrange a brilliant tournament, and are interested not so much in the investigation of truth as in the question of who will "win." We cannot hope for any immediate radical change in this method, but it is our duty to do all that we can to strengthen those elements in our

courts which are concerned, not with the gaining of a cause, but with the investigation of truth. This and all other reforms in our methods of dealing with the criminal, as I have already pointed out, and would again insist, cannot be attained by a mere administrative *fiat*; nor is it desirable that they should be. Before any reform can be safely embodied in the law it must first be embodied in the popular consciousness. We need here, as in so many other fields of our social life, a strong body of intelligent and educated opinion. This must accompany that revival, under the inspiration of the methods of natural science, of that science of jurisprudence which is at present the most stationary and scholastic of all the sciences.

These problems are every day becoming more pressing. The level of criminality, it is well known, is rising, and has been rising during the whole of the present century, throughout the civilised world. In France, in Germany, in Italy, in Belgium, in Spain, in the United States, the tide of criminality is becoming higher steadily and rapidly. In France it has risen several hundred per cent. ; so also for several kinds of serious crime in many parts of Germany ; in Spain the number of persons sent to perpetual imprisonment nearly doubled between 1870 and 1883 ; in the United States the criminal population has increased since the war, relatively to the population, by one-third. There is, no doubt, room for fallacy in many of these statistics ; various circumstances serve to modify such figures—a greater or less intolerance of crime, more or less success in capturing criminals, and variations in the methods of dealing with them. On the whole, however, there seems to be a general agreement that the increase is real.

Insular Great Britain alone appears to be relatively unsubmerged by the rising tide of criminality; but even here there is a real increase, in proportion to the population, in the more serious kinds of crime. Crimes of passion are rarer among the Anglo-Saxon race in England, Scotland, and America than anywhere else; but crimes of interest are proportionately more common than elsewhere. The decrease is in minor offences, and is due in large measure, no doubt, to reasons connected with the police. The anomaly of the comparative freedom of Great Britain from crime has been explained by foreign observers in several ways—by the former frequency of hanging and of transportation in England, thus eliminating a large number of criminals,¹ and by the firmness with which sentences are executed. It is probable that the great stream of emigration from Great Britain, carrying away much of the finest, but also much of the most turbulent elements (the two are often connected), has had a very marked influence in this respect.

Criminality, like insanity, waits upon civilisation. Among primitive races insanity is rare; criminality, in the true sense, is also rare. Conservatism and the rigid cult of custom form as distinct a barrier against crime as they do against progressive civilisation. As the methods of enlarging and multiplying the uses of our lives increase, so do the abuses of these methods. In an epoch of stress, and of much change and readjustment in the social surroundings

¹ In New South Wales, Tasmania, and Western Australia, the colonies to which criminals were transported, there is more criminality than in the other Australian colonies. This hereditary criminality would have swelled the sum of British crime.

and relations of individuals, ill-balanced natures become more frequent, and the anti-social and unlawful instincts are more often called out than in a stagnant society. The criminality of the Irish in England is far greater than that of the Irish at home, and it is a significant fact that while the Americans are more criminal than the English, the criminality of the English-born in the United States is more than double that of the native American whites. Like insanity,¹ criminality flourishes among migrants, and our civilisation is bringing us all more or less into the position of migrants.

But the problem of criminality is not thereby rendered hopeless. Rather it is shown to be largely a social fact, and social facts are precisely the order of facts most under our control. The problem of criminality is not an isolated one that can be dealt with by fixing our attention on that and that alone. It is a problem that on closer view is found to merge itself very largely into all those problems of our social life that are now pressing for solution, and in settling them we shall to a great extent settle it. The rising flood of criminality is not an argument for pessimism or despair. It is merely an additional spur to that great task of social organisation to which during the coming century we are called.

It is useless, or worse than useless, to occupy ourselves with methods for improving the treatment of criminals, so long as the conditions of life render the prison a welcome and desired shelter. So long

¹ Thus Dr. Carriell, in a recent Report of the Central Hospital for the Insane of the State of Illinois, shows that whereas only 19 per cent. of the population are foreigners, 41 per cent. of the insanity was among foreigners.

as we foster the growth of the reckless classes we foster the growth of criminality. So long as there are a large body of women in the East of London, and in other large centres, who are prepared to say: "It's Jack the Ripper or the bridge with me. What's the odds?"¹ there will be a still larger number of persons who will willingly accept the risks of prison. "What's the odds?" Liberty is dear to every man who is fed and clothed and housed, and he will not usually enter a career of crime unless he has carefully calculated the risks of losing his liberty and found them small; but food and shelter are even more precious than liberty, and these may be secured in a prison. As things are, the asylum and the workhouse, against which there is a deep prejudice, ingrained and irrational, would have a greater deterring influence than the prison. There are every morning at Paris 50,000 persons who do not know how they will eat or where they will sleep.² It is the same in every great city; for such the prison can be nothing but a home. It is well known that the lot of the convict, miserable as it is, with its dull routine and perpetual surveillance, is yet easier, less laborious, and far more healthy than that to which thousands of honest working men are condemned throughout Great Britain. The fate reserved for a French convict is one that might well be the reward of honesty. He is sent to New Caledonia, to marry, to settle, perhaps to become rich. "I do not know," an ex-deputy, sent out to report on the condition of the convicts, is said to have declared, "any struggling peasant or small proprietor in France who would not

¹ *Pall Mall Gazette*, 4th Nov. 1889.

² Macé, *La Service de la Sûreté à Paris*.

gladly exchange his lot for that of a convict of the first class in New Caledonia." "The working classes," as Professor Prins, one of the most able and thoughtful students of this subject, remarks, "badly housed, badly nourished, vegetate at the mercy of economic crises.¹ The worker is always on the borders of vagabondage; the vagabond is always on the borders of crime. The entire working classes are thus exposed in the first line, and whether it is a question of disease or of crime, it is they who succumb first."² Crime would be much commoner than it is if it were not for the communistic practice of mutual helpfulness which rules so largely among the poorest classes, and mitigates the stress of misery. All the more thoughtful students of the criminal, among whom Ferri in this respect stands first, have seen the direct bearing on criminality of what Colajanni has called Social Hygiene. We may neglect the problems of social organisation, but we do so at our peril.

It was at one time thought that the great panacea for the prevention of crime was education. Undoubtedly education has an important bearing on criminality, but we now know that the mere intellectual rudiments of education have very little influence indeed in preventing crime, though they may have a distinct influence in modifying its forms. Such education merely puts a weapon into the hands of the anti-social man. The only education that can avail to prevent crime in any substantial degree must be education in the true sense, an education

¹ In Bavaria, for instance, it has been shown that every increase of six kreutzer in the price of corn meant one theft more per 100,000 inhabitants.

² *Criminalité et Répression*, p. 17.

that is as much physical and moral as intellectual, an education that enables him who has it to play a fair part in social life. The proportion of criminals with some intellectual education is now becoming very large; the proportion of criminals who are acquainted with any trade still remains very small; the proportion of criminals engaged in their trade at the time of the crime is smaller still. We seem to be approaching a point at which it will become obvious that every citizen must be educated to perform some useful social function. In the interests of society he must be enabled to earn his living by that function. If we close the social ranks against him he will enter the anti-social ranks, and the more educated he is the more dangerous he will then become.

All education must include provision for the detection and special treatment of abnormal children. We cannot catch our criminals too young. Taverni has found that criminals in childhood are marked especially by their resistance to educative influences. It is our duty and our interest to detect such refractory and abnormal children at the earliest period, to examine them carefully, and to ensure that each shall have the treatment best adapted to him. It is much easier, and much cheaper, to do that, than to wait until he has brought ruin on himself and shame on his friends. This is beginning to be recognised and acted upon in those countries that are most alive to the meaning of education; in Sweden, for instance, there is a careful medical supervision of schools, by medical officers who are not subordinate to the teachers, although this supervision is confined to the physical condition and capacities of the child. It is indispensable, if we are to deal effectually with the

criminal, that we should be able to refer to the record of his physical, mental, and moral dispositions during childhood. In England recently a committee, consisting of the most eminent medical men specially qualified for the task, was appointed to examine into the condition of children in primary schools. This committee, owing chiefly to the enthusiasm and labour of Dr. Francis Warner, accomplished much valuable work, but the London School Board refused to allow any access to its schools. The London School Board consists, one may suppose, of intelligent persons, genuinely interested in education, and representing the sense of the community, yet they refused to consider one of the most serious problems that the educator has to face. So true it is that every society has only the criminals that it deserves.

While a wise modification of the educative influences is here of the greatest importance, we must not forget that to a very large extent the child is moulded before birth. There is no invariable fatalism in the influences that work before birth, but it must always make a very great difference whether a man is well born and starts happily, or whether he is heavily handicapped at the very outset of the race of life; whether a man is born free from vices of nature, or buys freedom, if at all, at a great price. There is evidence to show how much of the welfare of the child depends on the general physical and emotional health of the parents, and that the child's fate may be determined by some physical weakness, some emotional trouble at conception or during pregnancy. No legislation can step in here, save at the most very indirectly. We can, however, quicken the social and individual conscience. The making of children is the

highest of all human functions, and that which carries the most widespread and incalculable consequences. It is well to remember that every falling away from health, every new strain and stress, in man or woman, may lay an additional burden on a man or woman yet unborn, and perhaps wreck a life or a succession of lives.

This is not the place to develop these various consequences which flow from our consideration of the nature and treatment of the criminal. It seemed well, however, to indicate them, if only to show how large a problem is this of criminality. Perhaps every social problem, when we begin to look into it and to turn it round and to analyse it, will be found not to stand alone, but to be made up of fibres that extend to every part of our social life.

APPENDIX A.

Explanation of Plates.

FRONTISPIECE.

Composite photograph of twenty criminals—"dullards"—in the Elmira Reformatory. It may be compared with Plates XIV. and XV. I am indebted to the kindness of Dr. Hamilton Wey for these photographs.

PLATE I.

1. S. E., age 32. Life sentence. Third time a convict, and he says "all for the same man." His story is that he was flogged by the mate of his ship at Callao, that he jumped with the mate into the water, and after a chase on shore he stabbed him. He speaks of the mate as his lifelong enemy. Height 6ft. 0 $\frac{1}{4}$ in. without boots. Very powerful. A most determined villainous expression, but a massive forehead. Small compressed mouth. Attempted suicide at Millbank. Lost left arm at Woking from disease of elbow joint.

2. T. W., murderer.

3. G. W., gardener, age 86; seven years for uttering counterfeit coin. Three previous short sentences.

4. J. C., farm labourer, from Nottingham, age 62; ten years' sentence; petty thefts many times. Fourth time a convict.

5. A. J., from Paisley, age 50; cattle stealing; two years a soldier; "could not learn the bugle-calls or anything." Weak-minded; most of life in prison; three terms of penal servitude; eleven shorter sentences.

6. P. J., charcoal burner and collier, from Hereford, age 36; unlawfully and maliciously wounding; "low type of intellect." Very troublesome at Chatham, and among the weak-minded at Millbank. One previous sentence of penal servitude.

PLATE II.

1. T. C., chemist, from Portsea, age 21. Paid his addresses to girl whose mother objected; attempted to murder latter by administering prussic acid. Eight years' penal servitude. Valvular disease of heart after rheumatic fever.

2. G. H., farm labourer, from Leeds, age 50; "very low type;" twenty years for shooting wife.
3. J. H., soldier and navvy, from Durham, age 60; conspiring to murder.
4. J. C., from Liverpool, fifteen years for manslaughter.
5. E. L., dock labourer, from Bristol. Life sentence for murdering wife's paramour; genitals undeveloped; fatty tumours on scapula.
6. W. G. H., from Lincoln, age 12. Manslaughter; fifteen years. Second and third toes webbed.

PLATE III.

1. R. W., dock labourer, from Paisley, age 18. Assault and robbery; ten years. Previous conviction for theft.
2. E. S. J., farm labourer, age 38; seven years for horse-stealing and other thefts; four previous convictions.
3. W. W., stone-masons' labourer, from Kirkdale, age 21; seven years and flogged for robbery with violence. Three previous shorter sentences.
4. G. W., puddler, from Salford, age 21; five years for wounding.
5. W. S., cook and steward, from Liverpool; ten years for larceny; five years previously for ditto.
6. W. C., age 25. Robbery with violence; ten years. Two shorter sentences.

PLATE IV.

1. J. J., hawkker, from Hull; seven years for theft.
2. J. M., age 28; eight years a tailor, "rest of life a thief." Seven years for larceny, housebreaking, and receiving.
3. V. M., maker of pearl ornaments, from Birmingham, age 20. Thief chiefly; twelve times in prison.
4. J. W., collier, from Durham; seven years for felony; seven shorter sentences previously. Right eye destroyed.
5. W. T., farm labourer, from Hereford, age 21; ten years for receiving stolen goods.
6. N. K., collier, from Gloucester; seven years for receiving joint of a sheep, stolen and cut up by another; previous conviction for stealing fellow-labourer's dinner. "Low type; history told as if it was all a joke."

PLATE V.

1. J. H., from Chester, age 21; five years for burglary. In reformatory and seven times in prison. "Very prominent forehead; small eyes nearly concealed by upper lid."
2. J. C. E., age 25; seven years for housebreaking. "Low type."

3. S. P., age 35 ; weaver, from Wakefield ; ten years' penal servitude for felony ; five years previously.

4. J. P., costermonger ; seven years ; house and general thief.

5. D. M., a Greek, age 16 ; letter sorter ; five years for stealing parcels. His father had been in penal servitude for stealing bonds.

6. H. S., letter-sorter, age 21. Five years for stealing a letter.

PLATE VI.

1. V. S., age 17 ; rape on girl of 13 ; "very low type."

2. W. W., age 45 ; coal miner and stoker, from Stafford ; rape on child of 10. "Strong, villainous expression."

3. H. O., groom and jockey, from Leeds, age 57. Bestiality ; fifteen years' penal servitude ; conspiracy by servant girl, he says. Threatened to destroy himself. "Eyes very close to the nose ; small head ; low type."

4. W. M., age 32, from Manchester ; nine years a soldier, farm labourer before and since ; ten years for crime *contra naturam*.

5. T. R., age 16 ; farm labourer, from Worcester ; ten years for rape ; "monkey face."

6. W. B., age 23, from Manchester ; height 5ft. 0½in. ; seven years for arson ; intellect feeble.

PLATE VII.

Relation of the age of Fathers in normal subjects, criminals, and the insane (adapted from Marro).

	Normal.	Criminals.	Murderers.	Sexual Offenders.	Thieves.	Sharpers.	Insane.
	per cent.	per cent.	per cent.	per cent.	per cent.	per cent.	per cent.
Period of immaturity . .	8.8	10.9	2.9	2.7	15.5	2.8	17.0
„ maturity	66.1	56.7	44.1	66.6	57.2	60.0	47.0
„ decadence	24.9	32.2	52.9	30.5	27.1	37.1	36.0

PLATE VIII.

Tattooed criminal from Lombroso's *Uomo Delinquente*. A French sailor, a deserter, previously condemned for an unknown crime. The various inscriptions and designs bear witness to his vicious and criminal tastes. The heart's case, for instance, is common among pæderasts.

PLATE IX.

The eight heads in this and the following Plate have been chosen, intentionally, almost at random, in order to show the average types of criminal with whom the London police at Scotland Yard have to deal.

1. F. C., age 61. A well-known London burglar; tattooed.
2. C. D., age 31. Housebreaker. "A dangerous character." Many scars on head, body, and limbs.
3. H. A. G., age 36. "A very clever swindler," "of gentlemanly appearance, and good address." Speaks French and German.
4. W. A., age 42. "A desperate burglar, and will assuredly use firearms." A smith, native of Middlesex. Several scars.

PLATE X.

1. J. C., age 32. Shoemaker by trade, native of London. "A daring burglar; will probably use firearms." Tattooed.
2. M. A. L., age 28. Factory hand, born at Sheffield. "A dangerous thief," who has had eight years' penal servitude for assault and robbery.
3. W. K., age 40. "A dangerous thief, with several convictions."
4. R. W., age 23. Born at Hartlepool. "A dangerous man." Larceny.

PLATE XI.

The heads in this and the following Plate are chiefly Italian, and taken from Lombroso's *Uomo Delinquente*.

1. Desroues, poisoner.
2. Cartouche.
3. B. S., Piedmontese forger.
4. Incendiary (and cinædus) of Pesaro, nicknamed "the woman."

PLATE XII. ITALIAN BRIGANDS.

1. A Calabrian brigand.
2. Carbone, a brigand chief.
3. A Basilicata brigand.
4. Venafrò di Caspoli, brigand.

PLATE XIII. FRENCH CRIMINALS (from Corre's *Les Criminels*).

1. Tropmann, an Alsatian mechanic, aged 19, who assassinated a family of eight persons.
2. Pranzini, thief, and murderer of three persons.

3. Oillic, age 27, Breton sailor, leader in the murder of the officers of the *Fœderis Arca*. Hair black, laughs continually, very energetic, very intemperate "without ever losing his head."

4. Carbuccia, age 26, a Corsican, who co-operated very actively in the same tragedy. Abandoned in childhood; very intelligent and very violent. Intemperate; handwriting tremulous like that of an old man.

PLATE XIV.

Composite photograph of eleven criminals undergoing physical training at Elmira.

PLATE XV.

Composite photograph of thirty-eight criminals undergoing physical training at Elmira.

APPENDIX B.

The Congress of Criminal Anthropology at Paris.

The second International Congress of Criminal Anthropology was held in August 1889 at Paris, in the large amphitheatre of the Faculty of Medicine. A very considerable audience assembled here during the week over which the Congress extended. Many distinguished representatives of science, law, medicine, and the administrative world came from very various countries, and official representatives were present from France, Italy, Russia, Holland, Belgium, the United States, Denmark, Sweden, Roumania, Servia, Brazil, Mexico, Peru, Paraguay, and Hawaii. Great Britain, it will be observed, was only conspicuous by its absence. Among those who took part in the proceedings of the Congress may be mentioned M. Thévenet, the Minister of Justice, Dr. Brouardel, the Dean of the Medical Faculty of Paris, and President of the Congress, MM. Théophile Roussel, Lombroso, Ferri, Garofalo, Moleschott, Lacassagne, Demange, Van Hamel, Semal, Ladame, Benedikt, Tarde, Wilson, Tenchini, Motet, Manouvrier, Alphonse Bertillon, Bournet, Féré, Coutagne, Letourneau, Mme. Clémence Royer, Drill, Clark Bell, Magnan, Topinard, Delasiauve, and the General Secretary of the Congress, Dr. Magitot.

In his opening discourse Dr. Brouardel remarked that the Italian school had the great merit of taking up again the study

of a question with which philosophy, law, and medicine have always been occupied. Every time in the history of a country that philosophic studies have free expansion, the desire to safeguard society, the spirit of toleration, the methods for ameliorating the fate of the guilty, of protecting them from themselves, and of taking them out of the environment which educates them to crime, have been the object of the meditation and study of great thinkers; and their conceptions have eventually conquered public opinion. It has been the honour of the Italian school—in the land where Roman law, the foundation of all law, was born—that it has again put into the crucible this problem of criminality, and that it has proceeded to the analysis of that problem by the only truly scientific method—by studying the psychology of criminals, and their pathological abnormalities. It will be its distinction to have declared against illusory enthusiasms, and to have founded a science which will contribute to the more efficacious protection of society.

The first communication came from Lombroso, as the recognised chief of the Italian school. He summarised what he believed to be the most important abnormal physical characteristics found among criminals—the presence of cranial and facial asymmetry, precocious synostosis, unusual frequency of left-handedness, large orbits, prominence of zygoma, large median occipital fossa, frequency of tattooing, etc. These characters, he considered, were all due to pathological causes. The discussion was at once commenced by M. Manouvrier. He began by declaring that he was by no means an antagonist of the Italian school. He granted that it had been proved that physical abnormalities are more common among criminals than among the ordinary population, but he claimed due consideration for the influence of environment; crime is a sociological matter much more than a physiological matter. M. Dimitri Drill said that, strictly speaking, there is no criminal type; there are, as Morel had shown, organic conditions of defect and degeneration, but criminality remained above all a social question. MM. Pugliese and Garofalo expressed very similar opinions. M. Lacassagne pointed out that we too often forget the factor of misery in the production of crime; he meant not merely social misery, but physiological misery, of which the origin was intra-uterine. As regards poverty, M. Garofalo could not share Lacassagne's views; his investigations had shown that the number of criminals furnished by the middle classes is, proportionately, quite equal to that furnished by the lower classes, while for some kinds of crime the upper classes gave a higher figure than the lower. Mme. Clémence Royer called attention to the importance of hybridism in the genesis of crime. The recrudescences of criminality, she remarked, correspond to the great epochs of the mingling of races.

Benedikt spoke of the relation between insanity and crime; the criminal is a diseased person, he held, or a lunatic, and we must consider the molecular troubles of the cerebral substance as well as the external physical signs. After M. Tarde, speaking as a *juge d'instruction*, had admitted the existence both of the organic predispositions to crime, and the influence of the social environment, M. Brouardel joined in the discussion. Crime should not, he said, be regarded as the result of any single isolated cause, physical, moral, or social, but of all those causes at once. The diagnosis of the criminal must be subordinated to the same rules as the diagnosis of a disease; that is to say, it is made up of related and simultaneous conditions. A single sign is insufficient to reveal the criminal, just as a single symptom will not prove typhoid fever. Professor Ferri well summed up the morning's discussion. Crime, he admitted, is a very complex phenomenon; it is a sort of polyhedron, of which every one sees a special side. All the points of view maintained that day were, at the same time, true and incomplete. Lombroso had brought to light the biological side of crime, but that was not the whole of it. Drill, Dekteren, and Manouvrier had shown the social side; Pugliese the legal side, which is a more special aspect of the social side. Tarde, the sympathetic critic of criminal anthropology, had not left out of sight the physiological side of crime. We must, like Moleschott and Brouardel, proceed synthetically, for crime is at once a biological and a social phenomenon. He recalled a saying of Lacassagne's at the previous Congress, that the criminal is a microbe which only flourishes in a suitable soil. Without doubt it is the environment which makes the criminal; but, like the cultivation medium, without the microbe it is powerless to germinate crime. Both biological and social aspects are fundamental in criminality, and they constitute the two essential data of criminal anthropology.

Dr. Semal, Director of the Mons Lunatic Asylum, and the official delegate of the Belgian Government, presided at the afternoon session, when various communications of a somewhat miscellaneous character were brought forward.

On the following morning Professor Van Hamel, of Amsterdam, presided, and M. Manouvrier brought forward again the question of anatomical criminal characteristics and their illusory character. M. Lombroso defended himself with his usual energy and spirit, pointing out the distinction between the instinctive criminal and the occasional criminal. He explained that he had himself given so much attention to the biological factor in criminality, although he was, above all, an alienist, because it had previously been entirely neglected. He admitted that his conclusions had sometimes been too rash, although founded on the observation of now nearly 27,000 individuals

by himself and others, but he had always been ready to give up an indefensible position. The atavism of criminals, he now believed, may largely be explained by morbid causes. The discussion was carried on by other members, and was sufficient, in the opinion of M. Garofalo, to show that the divergence of ideas was more apparent than real; those who far off seem adversaries, are found on nearer view to be partisans. On his proposition, it was decided by the Congress that it is desirable to continue on the largest scale the comparative study of criminals and normal persons, subjecting them to a severe and minute examination, in order to ascertain the physical differences which separate them. On the proposition of M. Lacassagne, it was unanimously agreed that access to prisons ought to be made easier, and that the bodies of executed criminals should be available for scientific study.

At the afternoon session, presided over by Professor Ferri, Dr. Coutagne read a paper on "The Influence of Professions on Criminality." Mr. Wilson followed on "The Statistics of Crime in the United States," in which he referred to the necessity of creating international criminal statistics, permitting of the comparative study of crime among different nations. M. Laschi brought forward an interesting communication on "Political Crime from the point of view of Anthropology," in which he spoke of the bearing of race on politics, and also on genius; and M. Giampietro dealt with "The Moral Responsibility of Deaf-mutes in relation to Legislation."

On Wednesday morning Baron Garofalo read an important paper on the question whether, when an individual's guilt has been recognised, the class of criminals to which he belongs can be determined by criminal anthropology. This question was discussed from, necessarily, a somewhat legal point of view, with Garofalo's customary ability and clearness. He was not concerned, he said, with the recognition of the criminal, but with his classification, and in criminal anthropology we must give the first place to psychology. He insisted on the necessity for the careful psychical examination of the criminal, although it is necessary also to consider his physical nature; while sometimes even the character of the crime is sufficient to class the criminal. Uniformity of punishment is a manifest absurdity; and he referred to the progress already made in France by the recognition of the gravity of incorrigible recidivism. The old criminal law only recognised two terms, the *offence* and the *punishment*. The new criminology recognises three terms, the *crime*, the *criminal*, and the *method of repression*. Criminal law, he concluded, must not be treated as a detached and isolated science; it must be subordinated to psychology and to anthropology, or it will be powerless to interpret and to determine, in any enlightened legislation, the

true classification of criminals. M. Alimena, a young Italian lawyer, thought that the considerations brought forward by Garofalo furnished presumptions only, and not judicial certainties. After a lively episode between M. Benedikt and M. Lombroso, M. Brouardel, bringing the discussion back to the point, remarked that the problem proposed by Garofalo—the classification of criminals—can only be resolved by the totality of the evidence. The complete investigation of the criminal can alone enlighten justice. The crime by itself is insufficient to class the criminal, just as the most senseless act is not enough to characterise a lunatic. The morning session was closed by some remarks from M. Herbetto, the official director of the *Administration Pénitentiaire*. The Administration, he observed, were following the results of criminal anthropology with close attention, ready to adopt all conclusions that were proved, as they had already adopted some. While recommending zeal and confidence in the pursuit of these studies, he urged that the conclusions should be as mature and as assured as possible, or criminal anthropology would risk its authority and *prestige*.

At the afternoon session, presided over by Professor Ladame (Geneva), M. Ferri read a paper on the determining conditions of crime—individual, physical, and social—and their relative value. M. Ferri is one of the most accomplished and philosophic advocates of the new criminal anthropology, and his paper, and its subsequent eloquent elucidations, were listened to with great attention. Crime, he said, is at once biological and social. Out of 100 persons living in the same conditions of misery and abandonment, 60 commit no crimes; of the other 40, 5 commit suicide; 5 become insane, 5 are beggars, 25 commit crimes; therefore the social environment is not the exclusive cause of crime. But, again, we must not neglect the social environment, for, to mention one piece of evidence only, the maximum of crimes against property is reached in winter. And, again, the most delicate biological modifications must be considered, for rapes and crimes of violence are most common when the temperature is high, and climate and barometrical pressure play a certain part. If the thermometer had marked ten degrees less, or the barometer a few millimetres more, perhaps such and such a crime would not have been committed. The conclusion is that, on the one hand, we must ameliorate social conditions for the natural prevention of crime, and on the other hand exercise measures of temporary or perpetual elimination of individuals, according as the biological conditions in each case seem more or less curable. M. Alimena attached great importance to education, especially to its hereditary effects. The criminal ought not to be able to say to his judge: “Why have you not made me better?” He agreed with the

words of Lacassagne at the former Congress at Rome: "Societies have the criminals that they deserve." M. Manouvrier considered that Ferri did not attach enough importance to the social factor; no two persons lived in the same social environment. This was also the opinion of M. Drill. M. Tarde expounded his views as to the characteristics of criminals being due to the professional exercise of crime. M. Féré would not believe in any professional type until it had been established by precise measurements. The discussion on the whole showed that, as M. Van Hamel said, society to defend itself must have an eye on every side.

On Thursday the members of the Congress visited Sainte-Anne, where M. Magnan demonstrated the subject of degeneration. They also visited the Prefecture of Police, where M. Alphonse Bertillon showed his anthropometrical method of identifying criminals in action, and M. Moleschott succeeded with little trouble in identifying a man who had given a false name.

On Friday morning M. Tarde presided, and M. Pugliese, of Trani (Italy), read a report on the criminal trial from the sociological point of view. The evidence which demonstrates the existence of a crime and of a criminal can only be duly weighed by a magistrate possessing much technical knowledge. It is not enough for him to be a judge or a jurist; he must be well acquainted with anthropological and sociological science; he must know the environment in which crime is produced, and the people who are born to live and die in this environment. He advocated the establishment by the State of a college for the education of magistrates. At present there is great confusion, and the magistrate is called upon to decide complex questions of which he is quite ignorant. The duty of the judge to demand the decision of science with the power to tread it under foot was a manifest contradiction. It was not reasonable that a medico-legal judgment should be over-ridden by a jury, and it was time to reverse the ancient maxim that the judge is the expert of experts. When it is a question of legal medicine, the medico-legal expert must be the judge. There should be a medico-legal commission, whose duty it would be not to express opinions, but to give decisions. That is the only way to avoid many scandals. M. Brouardel, from the medico-legal standpoint, said he was not able to accept the present which Pugliese offered him. Every trial had issues which were not medical, and here the medico-legal expert would be incompetent. Apart from this, he would be cautious as to using anthropological data at all. It was still premature, and to go too fast was to risk compromising everything. M. Benedikt agreed with M. Brouardel, and advocated the scientific education of lawyers, which M. Lacassagne also considers desirable.

The next paper was by MM. Taverni and Magnan on the childhood of criminals, and the natural predisposition to crime. M. Taverni had made a number of investigations on children in reformatories—a study which he called pedagogic biology—and had traced backwards the childhood of criminals, and forwards the career of unpromising children. The chief indications he had found in the childhood of criminals were inaptitude to education, resistance to family order, and the revolt against social conventions. Among adult criminals one found in childhood the same characters of inaptitude and resistance. For M. Magnan the child was often already a complete criminal, as the result of physical and moral degeneration, due to nervous, insane, or alcoholic heredity. He regarded the matter as a purely clinical one (following Moreau, of Tours, and Morel). He brought forward many interesting examples, and pointed out that in all of them sexual aberration played a very prominent part. An interesting discussion followed. MM. Motet, Dalifol, Roussel, and Herbette regretted that the State did not undertake the care of children at an earlier age, when there was greater hope of the favourable influence of physical, moral, and intellectual education. M. Lombroso, while expressing his great esteem for M. Magnan (the Charcot of alcoholism, as he called him), was not able to agree with him. What he had himself said about children was founded on the observations of Perez, Taine, and Spencer. Moral sense was often lacking in the child. He was an embryonic criminal. MM. Moleschott and Van Hamel spoke in defence of the child who is unconscious. He was not chaste, because he had no ideas of modesty. He had no respect for truth, and the destructive instinct is strong in him. M. Moleschott referred to the anecdote in which Goethe recorded the delight with which, as a child, he once produced a terrible carnage among the crockery. But we must not confuse a phase of evolution with the conditions of disease or criminality. M. Rollet, the advocate who pleads before the tribunals at Paris the cause of all children who are arrested (about 20 to 30 boys and 8 to 10 girls every day), said that he always pleaded irresponsibility, and demanded an acquittal. The child was then either handed over to its parents, or to the philanthropic society of which Th. Roussel is president. If the child appeared vicious, he demanded that he should be sent to a reformatory until the age of 20. He judged by the physiognomy and the history, but thought it would be a great advantage to have the competent advice of a criminal anthropologist. This wish was immediately satisfied. M. Manouvrier offered to come to the Palais de Justice every day. Mme. Pigeon said that in her experience she had never met a child of five or six, however perverted and vicious, who was refractory to education. It was, however, a

task requiring great care and devotion. The regeneration of the child, M. Eschenauer said, could only be by love. M. Roussel, who has devoted his life to the cause of the disinherited children of society, spoke of the progress that had been made, and said that the tendency was to enlarge more and more the sphere of the State.

At the afternoon session, presided over by M. Drill, M. Brouardel called the attention of the Congress to troubles of development appearing at puberty. He drew a vivid picture of lively and intelligent Paris *gamins* whose precocious development is arrested at puberty, both physically and mentally. The sexual organs do not develop, hair does not appear on the body. Instead of this, at 16 or 18 they become plump and feminine in appearance and manners, and there is sexual impotence. Previously brilliant at school, they now become lazy, and incapable of sustained attention or effort. In later life they may become artists, poets, or painters, if born in easy circumstances, but their work does not give proof of the higher artistic qualities. Their devotion to those who surround them is often of almost feminine tenderness. The chief factors in producing this acquired degeneration are complex, such as overwork, unhealthy dwellings, precocious sexual habits, and early alcoholism. M. Herbette then described the efforts of the French Government in what he described as moral orthopædics. They endeavoured to remove from the child every idea of fatalism. M. Bérillon said he had been very successful in treating vicious children by suggestion, and had succeeded in curing bad sexual habits at one sitting.

M. Tarde then gave a summary of his report on the old and the new foundations of moral responsibility. In this interesting and ingenious paper, of a somewhat metaphysical character, he tried to show how moral responsibility harmonises at once with the human conscience and with contemporary science. Responsibility rests on identity, and by identity he meant individual identity and social identity. This responsibility rests on the determination of our actions, and is only relative. Mme. Clémence Royer replied from a strictly scientific standpoint. All our acts are determined by our physical nature. M. Coutagne refused to enter the domain of metaphysics. The question was a practical one, and every individual, sane or insane, must be treated as responsible. M. Motet said the question was a clinical one. If the individual is normal, his responsibility is complete; if he is abnormal or degenerated, his responsibility is limited; if he is insane, his responsibility is *nil*. M. Manouvrier would reject metaphysics absolutely. M. Ferri said that we must not accept the conceptions of merit and demerit. All men are responsible before society, but society has no right to punish. It has only the right to protect itself.

M. Tarde, in a spirited speech, defended his position. He protested against the confusion of the criminal and the insane. There is a profound reason for the fibres of indignation and contempt that is rooted in us, and as long as they persist we shall turn them against the criminal who acts in accordance with his native and not morbid character.

On Saturday morning Professor Lombroso presided. A proposition declaring that it is desirable that every Government should adopt Bertillon's anthropometric method for the identification of recidivists was unanimously adopted. M. Semal then read a paper on conditional liberation and conditional detention. The beginnings of these have already appeared in several countries, but to carry them on safely on a more extended scale it is necessary to practise the most careful physical and psychical examination of the prisoner. This would create, under the shield of medical science, a clinical field of the bar. It would also necessitate the spread of knowledge which is now lacking, and a re-organisation of the administration and medical inspection of prisoners. M. Bertillon trusted that anthropological considerations would not lead the prison administration to neglect its duties of moral reformation. M. Benedikt said that prison chaplains agreed with medical men in recognising the incorrigibility of certain criminals. M. Drill thought that we must clearly distinguish judgment from punishment. Reference had been made to the sentiments of hatred and revenge, but those sentiments were the outcome of habit or atavism. Formerly they were exercised in the same way against the insane. The change of feeling towards the insane is due to a true appreciation of the nature and causes of insanity. We do not sufficiently consider the conditions under which criminals are placed. It is not without reason that our Russian people speak of prisoners as "unfortunates." M. Vesnitch (the official representative of Servia) desired that the legal side of the question should not be lost sight of. The study of anthropology and of law ought to be compulsory for all those who desire to become governors of prisons.

M. Sarraute then read a paper on the judicial applications of criminal sociology. Law students should be examined in criminal anthropology and legal medicine. Imprisonment should be for an indefinite period, and the prisoner carefully observed and examined. The jury should be modified. M. Tarde observed that advocates were already using the results of criminal anthropology, and it was necessary that magistrates should be in a position to appreciate the bearings of such arguments.

M. Taladriz then read a paper on "Criminality in its relations with Ethnography," drawing his illustrations largely from Spain, where crime differs greatly in different parts of the peninsula.

He desired the establishment of an international penal code, protecting the rights of nationalities.

In the afternoon Professor Benedikt presided, and M. Van Hamel read his report on the "Cellular System from the point of view of Biology and of Criminal Sociology." He concluded that there should be a very careful selection of cases for cellular isolation, subject to psychical and medical examination. The results depended quite as much on the treatment adopted during the cellular confinement as on the confinement itself.

On the proposition of M. Garofalo a commission was appointed to carry on a series of observations on 100 criminals and 100 honest persons whose antecedents were perfectly well known. On the proposition of M. Semal, the Congress affirmed the necessity of a psycho-moral examination of the prisoner as a preliminary to conditional liberation. It was resolved also that it is desirable that law students should be instructed and examined in legal medicine; and, on the proposition of M. Eschenauer, that the direction and instruction of young children in reformatories should be confided to experienced women.

In his closing discourse Professor Brouardel remarked how various and complex are the issues raised by criminal anthropology. They were dealing with one of the most interesting and profound of all problems—a problem which had in all ages exercised the human mind. The Congress had brought together some of the materials for a future edifice, although they were not yet able to raise it.

The *Archives de l'Anthropologie Criminelle* was the official journal of the Congress, and the number for September 1889 was entirely devoted to its proceedings. The next Congress will be held at Brussels in 1892.

APPENDIX C.

The International Association of Penal Law.

This association was founded in 1889 on the initiative of Professor von Liszt. Its success was immediate, especially among lawyers, professors of law, and magistrates; and this success is a remarkable proof of the great movement for penal reform which is now everywhere making itself felt. Nearly twenty countries in Europe and America are represented by the association. It is truly international; no attempt is made to discuss national modifications, or to advocate the doctrine of any school. The conditions of membership involve adherence to the following propositions:—

I.—The mission of penal law is to combat criminality regarded as a social phenomenon.

II.—Penal science and penal legislation must therefore take into consideration the results of anthropological and sociological studies.

III.—Punishment is one of the most efficacious means which the state can use against criminality. It is not the only means. It must not, then, be isolated from other social remedies, and, especially, it must not lead to the neglect of preventive measures.

IV.—The distinction between accidental criminals and habitual criminals is essential in practice as well as in theory; it must be the foundation of penal law.

V.—As repressive tribunals and the penitentiary administration have the same ends in view, and as the sentence only acquires value by its mode of execution, the separation, consecrated by our modern laws, between the court and the prison is irrational and harmful.

VI.—Punishment by deprivation of liberty justly occupying the first place in our system of punishments, the association gives special attention to all that concerns the amelioration of prisons and allied institutions.

VII.—So far as short imprisonments are concerned, the association considers that the substitution of measures of equivalent efficacy is possible and desirable.

VIII.—So far as long imprisonments are concerned, the association holds that the length of the imprisonment must depend not only on the material and moral gravity of the offence, but on the results obtained by treatment in prison.

IX.—So far as incorrigible habitual criminals are concerned, the association holds that, independently of the gravity of the offence, and even with regard to the repetition of minor offences, the penal system ought before all to aim at putting these criminals for as long a period as possible under conditions where they cannot do injury.

“The association,” it is elsewhere stated, “starts from this point of view, that in order to combat criminality we must know criminality.” As Professor von Liszt said, “That which guides us and brings us together is the conviction that penal science must rest on the firm basis of facts, must attach itself to the realities of social and individual life, and not be content with the purely intellectual development of purely legal notions.” This is the only sound and rational foundation for criminal law, and it is because the association has adopted this foundation that I desire to call special attention to its valuable and fruitful work.

The first session was held at Brussels, in August 1889. Berne was selected for the second, in 1890. The bulletins of

the association (printed both in French and German) contain the reports presented at these meetings, as well as the subsequent discussions. They may be obtained, for a small sum, from the publisher, J. Guttentag, Berlin, or from C. Muquardt, Librairie Européenne, Brussels. The annual subscription is four shillings, and is payable to Professor G. A. Van Hamel, Amsterdam, Holland.

APPENDIX D.

Some Cases of Criminality.

I have here brought together a few cases of fairly ordinary and representative criminality, chiefly in order to show how such cases are generally investigated. It has not seemed desirable to lay down any definite system of examination. Elaborate schemes have been prepared; it is more difficult to settle on a definite scheme on a small scale. At present it seems best to leave much to the judgment of the individual investigator. The six cases here given will serve to show how criminality is usually investigated, and may be useful as a guide.

I.—B. A., aged 18, carpenter; weight, kilog. 69.3; height, m. 1.77. Complexion pale. In various parts of body scars from wounds by knife, dagger, stones, and glass, received in various quarrels. Head also covered by scars. Hair on head very abundant; entirely without beard. Prominent superciliary arches. Enormous frontal sinuses, lower jaw voluminous; lemurian appendix present; forehead low and narrow; head normal.

Esthesiometer: left, $1\frac{1}{2}$; right, $1\frac{1}{2}$; tongue, $1\frac{1}{2}$. Dynamometer: left, 42; right, $40\frac{1}{2}$. Tendon reflexes normal. General sensibility: right, 52; left, 50. Sensibility to pain: right, 28; left, 30. Slow to distinguish colours.

Drunkard; began at age of 12, led on by his mother. Has thieved frequently, but only found out once at the end of two years, and condemned. Is irreligious.

When he is drunk feels melancholy. Has epileptic convulsions, in which he falls down, and is frequently wounded. He has had similar fits for six years; they are followed by complete amnesia. The first came on in an educational institute, after being compelled to take a cold bath in January.

Three or four hours before the fit he is so stupid that he cannot reckon two coppers that he holds in his hand; and that he cannot recognise the people around him, though he may have known them for some time.

After the fit he does not know where he is, and for two or three days cannot drink water or bathe, on account, he says, of the cold bath that brought on his disorder.

Is not easily affected; has no aspirations; does not concern himself with politics.

Cannot say anything of his parents, except that his mother was a drunkard. (V. Rossi.)

II.—D., age 18, of Turin, smith. A woman's head tattooed on his right arm, and the beginning of a name (record of love); in epigastric region a transfixed heart (to recall a revenge to be accomplished). A scar in left frontal region; cannot, or will not, say how he got it, but has ever since suffered from giddiness.

Complexion very pale; vasomotor reaction more marked on the left; pupils react slowly; facial asymmetry; ears prominent. Hair sparse, dry, and very dark. Fingers very long and slender. Has tremors; suffers from hypertrophy of heart. Head acrocephalic, flattened at the nape.

Cranial measurements: longitudinal diameter, 177; transverse, 151; longitudinal curve, 360; transverse, 300; maximum circumference, 530. Dynamometer: both hands, 34; right, 14; left, 17. Esthesiometer: right, 1.8; left, 1.2; tongue, 0.4. Topographic sensibility erroneous in both hands. General electrical sensibility: right, 49; left, 43. Sensibility to pain: right, 20; left, 27. (Normal person gives: general, 53; to pain, 38.) Temperature in axilla, 37°5. Slow to distinguish colours.

Vicious from a child; very precocious sexual habits.

At eight years commenced at school to steal certificates of merit in order to get a prize. At fourteen, at the invitation of a friend who was a thief, robbed a jeweller; from that time committed numerous robberies whenever he could. Willingly gets drunk, but his chief passion is travel.

In politics he would prefer a Republic, but without police or prisons; but confesses that in winter, when work is scarce, "it is not bad in prison."

His parents affirm they are honest, but not the other relations. Mother suffers from palpitation of the heart. One sister is leading a bad life; another is very religious. A maternal cousin was in prison. (V. Rossi.)

III.—Certa Fil, condemned to four years' imprisonment for thefts of fur cloaks and similar articles. Age 56. Circumference of head, 545. Right eye placed rather low. Tendon reflexes normal.

From a child she has suffered from illness caused by fear, owing to a fall into the water. From fifteen to thirty suffered from frequent headaches. Eight years ago, about three years before thefts, had typhoid fever, and also contracted syphilis

from her husband. She had frequent and severe pain in the temples. No children. Her mother suffered from arthritis, which caused melancholy, which is said to have contributed to her death. She had fourteen children, mostly twins, who all died at birth except one, who is very extravagant and dissolute.

Sensibility.—With esthesiometer: on the hand, 3 mm. on left, 2 mm. on right; head, 16 mm.; tongue, 9 mm. With faradic current: general sensibility, 70 mm.; on the hands, while a student has pain on palm at 55, on dorsum at 60, she has pain on right palm at 50, left at 50; right dorsum at 60, left at 55. Strength with dynamometer slight: right, 28 cg.; left, 38 cg.; with both hands, 58 cg.

Psychological Examination.—Married at age of nineteen, she lived happily with husband for twenty years, *i.e.*, until age of thirty-nine. Then the husband began to lead a dissolute life, and infected his wife with syphilis. Driven wild by her husband's continual ill-treatment, she began to steal furs and other articles from a neighbouring shop. She was always afraid of being discovered, and experienced remorse which took away sleep and appetite, and she planned methods for restoring the things without being discovered.

During her four years of imprisonment she did not learn the *gergo* or prisoner's slang, would not associate with her companions, and was always crying. She blushed slightly when questioned concerning her periods.

Diagnosis.—This woman, under the stress of illnesses and need of money, was drawn to theft; she was not, however, predisposed to crime, and (excepting the dissolute conduct of one brother) there were no marked signs of hereditary degeneration. When we add that she was never given to orgies, that she did not care to associate with her criminal companions, that she did not learn the *gergo*, that she blushed when spoken to without due consideration, we must conclude that she is an occasional criminal. If she had been in a comfortable social condition, and in good relation with her husband, she would probably not have become a delinquent. (Giuseppe Abradi, *Archivio di Psichiatria*, vol. x. Fasc. I.)

IV.—R. S., of Naples, age 23; height, m. 1.68; weight, kilog. 82.5. Soldier.

Traces on skin of wounds from fire-arms and knives; one on the abdomen given him by a woman.

Colour of skin is dark.

Tattoo marks on legs and arms: initials, daggers in memory of revenges to be accomplished, arrows as records of love; on his hand a sun; also bears the signs of the *camorra*, of which, but only as a great secret, he revealed the significance.

He declares that for him, and for the *camorrista* in general, tattooing is "a passion, an ambition, like that, for example, of

students for their collars and ties." "The more one is tattooed," he said, "the more one is esteemed and feared by comrades, because it shows how far one has gone in the road of crime."

Hair on head thick and dark; complete absence of beard. Prognathism: forehead small and narrow (165 × 48), lower jaw voluminous; eyes small and very mobile; frontal sinuses prominent. Has a certain air of *bonhomie* in his face which contrasts with the cynicism with which he narrates his criminal achievements.

Cranial measurements: longitudinal diameter, 187; transverse, 150; longitudinal curve, 364; transverse, 310; maximum circumference, 557. Dynamometer: with both hands, 84; with right, 54; with left, 43. Supports with extended arm a weight of kilog. 5 for fourteen minutes. Esthesiometer: right, 3.5; left, 4.5. Electrical sensibility: right, 40; left, 45. Sensibility to pain: right, 0; left, 0. Slow to distinguish colours, confusing blue and green. Thermometer: right, 37°5; left, 37°9.

Fond of wine; vicious since he was a child. Natural and unnatural sexual habits.

Except venereal disorders and a cyst, which he had as a child, has never been ill.

He has indeed been sent to a hospital as insane, but it was feigned, as he was then under trial, in order to obtain "attenuating circumstances."

By him and his family religion is regarded as merely imposture, and politics does not exist. In the newspapers he only reads the police news, as that which alone concerns him.

At age of 10 was "sent to college" (*i.e.*, house of correction), because he was found taking the impression of a lock. There he was initiated in the *camorra*, exercised by the lads clandestinely.

On coming out, he committed numerous offences, of which more than one remained unpunished. He wounded a prostitute whom he found with another lover. Thieved with dexterity, and was once condemned to twenty-five months' imprisonment. He robs from houses, and when opportunity offers picks pockets. At a penal establishment he joined with others to rob the director. He confesses that in his family, except one sister who is honest, all are rogues of his own stamp.

Maternal grandfather died at 60 in the hospital. Mother is healthy, but drinks; lost all her hair at 50; condemned for fraud and wounding. Father had five years' imprisonment for attempting to wound his brother, a priest, who refused to give him money; also drinks, and when drunk is very lively. A paternal uncle was condemned for "qualified" robbery. The maternal uncles are all *camorristi*.

He has five brothers and one sister. One, G., was four times in hospital, because when he committed a grave offence he

feigned madness ; so far this game has always succeeded, and he has been acquitted or punishment diminished. When he has money he is an angel, says R. S., but when he has none, he flies from him like the plague, for he becomes furious. He is a drunkard, and once when drunk severely wounded his mistress without cause.

Another brother, G., is a *camorrista* and sharper.

Another brother, E., does the elegant, and steals from "aristocrats" ; suffers from dizziness, especially in summer, or when near a fire.

A brother, N., calls himself an artist, takes impressions of locks, and makes false keys, for which he demands a more or less elevated price, according to the amount of the booty. Also studies padlocks, and makes facsimiles ; does not rob on his own account, nor is he *camorrista* ; and does not use the knife even when drunk.

The last of the brothers, Gia., has been condemned more than once for robbery and picking pockets. Is *camorrista*. (V. Rossi.)

V.—The following carefully-taken case (by Professor Angelo Zuccarelli, of Naples) of incorrigible insubordination in a soldier is translated from *L'Anomalo* of January 1889, and is a model of careful and systematic examination :—

Habitual conduct in the army, from 1881-1888, both on and off duty, is reported as bad ; frequently guilty of theft, insubordination and destruction of military effects. [Details here given of 59 offences, with resulting punishments, during this period.]

The following facts are all that can be obtained as to his family and previous history :—

Among the ancestors of his parents some eccentricity.

Mother hysterical, with nymphomania, and deafness due to chronic otitis.

Father, a drunkard and irascible.

One sister imbecile, and another scrofulous.

A brother, instinctive thief, imprisoned for "qualified" theft.

All the family given to thieving.

Our subject, now 28 years old, had no education from his parents ; was a shoemaker at Stilo (Reggio, Calabria), his native place, where he had a bad reputation for idleness and thieving.

PHYSICAL EXAMINATION.

Head.

Inspection and Palpation.—A considerable depression in the lambdoid region.

External occipital protuberance scarcely perceptible.

Markedly plagiocephalic on the right side, anteriorly ; with plagio-prosopia on the same side.

Ears small; the right planted further back.

Prognathism of the superior maxilla.

Absence of the two upper middle incisor teeth, from a fall in childhood. Inferior dental arch, with parabolic and oblique margin to the right; depressed on the right.

Colour of face, yellowish, pale.

Beard thin.

<i>Measurements.</i> —Circumference at the base ...				cent.	54
Anterior semi-circumference	„	28½
Posterior „ „	„	25½
Antero-posterior curve	„	31
Transverse „	„	31½
Approximate cranial capacity (results of three curves),					1165.
Maximum antero-posterior diameter	mill.	182
„ transverse diameter...	„	147
Cephalic index, 80.76 (cranial type, sub-brachycephalic).					
Bi-auricular diameter	mill.	128
Bi-mastoid „	„	126
Maximum frontal diameter	„	104
Bi-orbital „	„	108
Bi-maxillary „	„	102
Height of the forehead	„	56
„ „ face	„	128
Length of nose (to tip)	„	54½
Width „ (base)	„	32

Trunk and Limbs.

Body slender. Height medium.

Left mammary region depressed, and nipple lower than on right side. Posteriorly the left base of the thorax rather less developed than the right.

Hands thin, with long and pointed fingers.

Tattoo marks on the two fore-arms: on the right a transfixed heart, a woman's head, the letters F. and B.; on the left two stars, one large, the other small, the letters L. and A. (his initials), a cross, and nearer the wrist an indistinct sign ending in a B.

On the feet the two little toes are small, especially the left, out of proportion to the development of the rest of the foot.

Hair sparse.

Superficial veins healthy, but varicose in left popliteal region. Genital organs little developed.

PHYSIOLOGICAL EXAMINATION.

Dynamometer.—Right hand, 90; left hand, 85.

Tactile sensibility.—On the tongue the two points of the *esthesiometer* are perceived only at a distance of five mill. In

general the sensibility is very feeble. Localisation very inaccurate; impressions on one side often referred to the other.

Sensibility to pain.—Advanced hypoaesthesia, while reiterated punctures fetching blood are felt as slight touches. Burns with a lighted cigar are little if at all felt; but there is some dissimulation on the part of the subject.

Thermal and meteoric sensibility.—Apparently abolished.

There has been no opportunity for electrical examination.

Sight.—Does not distinguish colours well; sees red best. Pupils react imperfectly.

Hearing.—On the right side says he cannot hear a watch in immediate contact; on the left only at a short distance. In other ways his hearing has been found to be defective.

Smell.—Does not distinguish odours, of which in many cases he has no knowledge. Ammonia alone, deeply inhaled for a few seconds, causes slight lachrymation on the right side.

Taste.—Perceives vinegar, but not salt, bitter or sweet substances. On offering him half a glass of decoction of cinchona, and telling him that it is wine, and then another of vinegar, he swallows it all eagerly without any indication of disagreeable sensations. On giving him a bitter substance, and telling him it is sweet, he repeats that it is sweet, and *vice versâ*.

Appetite voracious; digestive functions normal. Circulation and respiration weak.

PSYCHICAL EXAMINATION.

Ideas very limited. No imagination or æsthetic sense. Memory very weak, limited to the most elementary and primitive cognitions. Will feeble, in the absence of any morbid impulse.

Moral and affective sentiments almost entirely absent.

No disposition to occupy himself in any way; tendency to idleness and vagabondage.

Unrestrained onanism, to which he formerly gave way four or five times a day, now only about twice a day, because, as he says, he is no longer strong enough. He confesses this without the least shame, with complacency, almost with pleasure.

He is not without a certain shrewdness, which is, however, easily discovered. He seems to have learnt from fellow-prisoners to pretend to feel nothing, and to be ready for anything.

He is capable of dissimulation, and of simulating at certain moments a state of feebleness beyond what he feels.

In his cell he usually walks up and down with short, bent head, and surly look. He is only aroused in moments of anger and violent impulsion.

He is often discontented with his food, and throws it away, breaking out into howls rather than cries, and destroying everything—table, stools, etc. In this condition any opposition only renders him more savage. Gentle methods often succeed better, especially when the stage of exhaustion sets in.

At other times the cause is some limitation to his tendency to free vagabondage. The animal-like howls are set up; then comes the destruction of everything that surrounds him, and violences of all sorts.

When he is interrogated in his calmer moments as to the reason of this, he replies that it is what they do in his country.

DIAGNOSIS.

Advanced physical and psycho-physical degeneration. Phrenasthenia. Moral idiocy. Instinctive criminality.

MEDICO-LEGAL AND SOCIAL CONSIDERATIONS.

This is the case of an instinctive criminal, a person fatally and immutably impelled to vagabondage, theft, and violence.

He bears the characters, physical and psycho-physical, of degeneration, of aberration, of constitutional abnormality, sufficient for recognition. Especially noteworthy are the lambdoidal depression, the marked plagioccephalia and plagioprosopia, the superior prognathism, and the inferior dental irregularities, the thoracic asymmetry, the pallid complexion, the hypoalgesia, the weakness and perversion of some of the special senses, the unrestrained onanism, the predominant love of vagabondage, the furious and animal-like anger, the destructive tendencies.

It is clear that all the admonitions and punishments inflicted during seven years, besides failing to produce any good effects, succeeded in exercising, so to speak, the natural mechanism of his violent impulses, and thus brutalised him still further. He is, therefore, incorrigible.

Of this the Military Tribunal of Naples were, as the result of this examination, convinced, declared that our subject is irresponsible, and acquitted him.

But does the duty of science end here? Is this verdict sufficient for order and social security?

Surely not.

This individual, thus constituted, must be regarded as a perpetual source of danger. It is therefore necessary to adopt a mode of treatment which, instead of brutalising him, will endeavour to obtain from him the maximum social utility of which he is capable, while at the same time it will render it

impossible for him to injure other persons who are unlike himself.

For this purpose sequestration is necessary, the method of moral treatment and the watchful care obtained within a criminal asylum.

VI.—The following report, by O. Hotzen (here abbreviated), appeared in the *Vierteljahresschrift für gerichtliche Medicin*, and in the *Archivio di Psichiatria* for 1889, fasc. 2.

Maria Köster died at the age of 22 of tuberculosis; at the age of 18 she had killed her mother with a hatchet; sixty wounds were found in the mother's body, some of them penetrating the skull.

As until then the girl had always been of good character, quiet and hard-working, and on account of her youthful age, she was examined by medical experts in order to ascertain if any morbid conditions had limited her free will.

No mental alienation was recognised, especially at the time of the deed, but certain preceding morbid phenomena and other subsequent circumstances led the experts to an opinion which resulted in the commutation of the death penalty to which she had been condemned.

Among her maternal ancestors, and in the mother herself, there had been extreme avarice; they were most eager of money, and possessed by the fury of gain; it was proved that this impulse had in some members of the family paralysed the sentiments of equity and honesty.

The father was a drunkard.

The girl had a certain amount of education; she wrote, in an exact style, a diary of her impressions. She had acted as a servant, as an assistant in a printing-office, as a sempstress. She was thin, and slightly developed; menstruated at 19; had a very high opinion of herself.

Apparently of tranquil disposition, she was declared by some to be envious, a liar, and a thief.

Notwithstanding simulated indifference, she coveted the savings which her mother had scraped together; she cherished hatred against her parents; continual quarrels and unworthy calumnies revealed a heart apparently good, in reality selfish and depraved.

There was slight asymmetry of the face, due to flattening on the right side; there was no perceptible lack of cranial symmetry.

The right pupil was larger than the left; both movable and perfectly sensitive.

She had hysterical attacks, which became rare before the deed, and were interpreted as a sexual neurosis of puberty. These attacks began with præcordial anxiety and oppression of breathing, and usually ended with a strong desire for

movement, to which she yielded with only partial consciousness. She was sometimes for hours in a semi-conscious condition, with extravagant movements, vociferations, senseless talk, etc. Sometimes she exaggerated the attacks ; at other times opposed them. From papers that she wrote in prison, it appears that some of these attacks were entirely simulated.

The sexual functions were very irregular ; she pretended a want of inclination towards the other sex ; the hymen was found lacerated.

She wrote a romance of her life, leaving out everything that might cause disgust, and expressing penitence for the attacks that she confessed to be simulated.

On her death-bed she developed attacks which were certainly not simulated.

She was very excitable, and her life was overspread by nervous tempests which, in spite of herself, she was not able to dominate.

She had little love for her mother, who was avaricious and hard-hearted, and refused her the slightest help.

In one of her papers, dating from the time of her most severe hysterical phenomena, there are religious expressions marked by undoubted sincerity ; but when religion did not afford the consolation she expected, her zeal cooled and she went to the opposite extreme.

After a brief mental struggle, she quietly selected the necessary instruments, and studied her criminal design to its smallest details, taking care to avoid discovery. After having formed her plans, she passed the night in quiet sleep, and on the following day committed the deed.

In appearance everything was the work of premeditation and clear consciousness. After the deed she astutely made insinuations against her father, who was entirely innocent of complicity ; on her knees, by her mother's body, she declared her own innocence.

She carried simulation to a fine point of art, displaying during these days an energy and resolution astonishing in a person so weak. It is clear that her deed had for the time raised her above herself.

She had a strange avidity for her mother's goods. Her great desire was separation from the paternal house and an independent position.

After the deed she said that she was no longer in the hands of Satan.

In prison she lived for more than three years without giving any sign of mental or of physical disease. She bore herself in an unchanging, composed manner, depressed, free from all eccentricity ; it was a consolation to her to know that her father and her sister had forgiven her.

At the end of 1886 appeared signs of rapid tuberculosis, to which she succumbed. She died penitent, feeling sure of reconciliation with God.

At the autopsy advanced tuberculosis was found in both lungs, also in the kidneys ; this was the cause of death.

The brain could not be examined immediately, and was therefore preserved.

The dura mater, adherent to the cranium externally, was white and lacking in lustre ; internally there were bright spots with red maculæ as distinct as in hemorrhagic pachymeningitis.

The brain was soft, humid, and very anæmic. Its weight, after the serum in the cavities had flowed away, was 1164 grammes. The occipital lobes did not entirely cover the cerebellum.

The form of the brain was elliptic. The sulci appeared deep and large. The parietal and temporal lobes were very large, with great development of the convolutions and numerous atypic clefts. The frontal lobe was small compared to the parietal, and its convolutions compressed. The frontal and occipital convolutions were not atypic except by their slight development.

There was scanty development of the frontal and occipital lobes, especially on the left side.

Conclusions.—We have here a real atrophy of the cerebral cortex, which has the characters of a congenital hereditary degeneration. This atrophy is manifested in the insufficient development of the frontal and, still more, the occipital convolutions, in the smallness of the convolutions, in the incomplete covering of the cerebellum by the cerebrum, and by the number of atypical segmentations in the cerebral cortex, representing (at all events in the opinion of Benedikt) a true aplasia.

These sulci were not the result of superior development ; in their neighbourhood there was no increase in the cerebral substance ; they are connected with a true atrophy of the cerebral mass. It is impossible to admit the idea of atavistic regression. The connections found between the frontal and inter-parietal fissures cannot be considered as the re-crystallisation of the primitive convolutions and the longitudinal fissures which characterise especially the carnivorous type. All these deviations are found separately in brains which have for the rest a normal structure. That which gives the morbid character is the extraordinary amount of irregularity.

It cannot be denied that the left hemisphere was the most irregular, although there was no cranial asymmetry ; facial asymmetry only being recognisable.

This matricide suffered from a grave neurosis at puberty, which left traces up to near the time of the homicide ; her judgments of life were affected by a permanent and powerful morbid influence.

We cannot put into exact causal relation the degenerative changes in Maria Köster's brain, and the perturbations of her psychical activity during life, but we are justified in considering her not completely responsible for all her actions.

APPENDIX E.

Elmira.

In the Report for 1885 the Secretary of Schools writes:—

Like Practical Morality, English Literature was at the beginning voted a nuisance by the selected members and greeted by them as a fresh infliction for the purpose of making more difficult the earning of marks. Distaste was varied by positive anger; here and there a man suffered his first bewilderment to pass into sullen unwillingness to make an attempt to understand the new study. Several on receiving a play or an essay, opened the book and closed it, doggedly declaring they had not the remotest idea of what was expected of them. Encouraging advice was given in every case of this sort that came to light, and when the pressure of the approaching examination began to act, nearly every man, willing or unwilling, attacked his author and his outlines. This first examination was sufficiently creditable and the historical part at least was well done; but expected signs were not wanting of mental confusion, of indifference, of ineffectual groping after an author's very palpable meaning, signs which revealed a likely material for mental discipline of the most valuable kind. The only means of removing these difficulties seemed to lie in repeated doses of the same medicine, a conclusion soon warranted by experience. Whatever could be was now done in the way of artificial illumination, and when it appeared that examinations could be and actually were passed by many men in the new subject, confidence began to dawn, and the authors were taken up for the next test with less ugliness and far more of tolerance. In a little while the class gathered momentum and became thoroughly a fact. The change was accompanied by phenomena which are unique from an educational and psychological point of view.

Any one passing along our corridors and galleries might now have witnessed a curious spectacle—that of a student of literature reading by gaslight, not the accustomed novel or light history, but the *Prologue* of the *Canterbury Tales*, the tragedy of *Hamlet*, Emerson's *May-Day*, or the story of *Evangeline*;

pondering over the weighted pages of Bacon, or keenly trying to read between the lines of Browning's *Paracelsus*; not rarely with a note-book at hand filled with private comments wrought out against the coming examination. At the examinations, be it remembered, the pupil was required to answer historical questions and, more important than this, to write out extemporaneously an essay or report dealing with some topic, more or less extensive, growing out of the text of his author—which topic was selected not by himself but by the Instructor on the day of the test. If one could realise the mental process of a "tough" from the slums of the metropolis, who, after passing up from class to class of our school, is forced to apply his intellectual faculties for the first time to the careful reading of an essay of Macaulay or a poem of Goldsmith, to enter in short upon the *terra incognita* of good literature; and if one could then conceive of the state of this same "tough" when, after six months of application with growing susceptibility, he reads up *for pure pleasure* the history of the Renaissance, searches the pages of Dante for illustrations of the text of Chaucer, ransacks our reference library for specimens of early English;—if one could do this he would comprehend in some measure what has been done by our class in English Literature. Our students, of course, were not wholly without intellectual culture at the start. A few possessed a large amount of it. All had been imbued with some sense of the excellence of culture by the labours of our lecturers in science, philosophy, and history. The discussions in the Practical Morality class had awakened our argumentative powers and developed a sharp relish for ethical questions. We had all had experience, too, in the reading of standard works of fiction and even of books of utility; but the formal study of an English, often of an old English, author, involving an examination, was something wholly new. A direct movement towards pure æsthetic culture was unprecedented for men who generally demanded that books should be amusing, should help to kill time in prison. The first effect was, as already remarked, discouraging. English literature did not immediately "take." But necessity made it take, and the inevitable love of literature which quickly sprang up did the rest. The essays and poems were conned over and over, and minds heretofore innocent of culture became saturated with the drinkable gold of the classics. A change of feeling came over us; distaste passed into satisfaction as the intrinsic beauty of the masters leavened our minds; indifference gave way to zeal and the study became delightful. An interest feeble at first had grown rapidly. Among the early favourable indications were the requests for information as to the lives of authors and the eager reading of biographies and literary notices. Then arose the desire to read other works of a given

author, or to be allowed to spend another month in more minute study of a masterpiece already absorbed in the rough. Notes poured steadily in upon me exhibiting in countless ways the growth of a sentiment which can be termed nothing else than enthusiasm. It was a true *naissance* or birth of letters. Like the scholars of the Revival period in England, our students, inspired by the simple love of learning, sought culture everywhere. Every available source of enlightenment, every volume of classic English in our reference library, was in its journey from hand to hand of our students a testimony to their enthusiasm. Books which had long remained unused suddenly became very popular, and the delight in reading expanded so as to include not merely literature but other lines as well—ethics, economics, sociology, history, the ancient classics, natural science. Thus on a very small scale, but none the less truly, our revival followed an instinctive development entirely similar to the great Renaissance. As we write the interest is undiminished, but rather grows by its own great energy of motion. The new spirit penetrates the whole life of the institution. In their social intercourse our inmates make regular topics of books and authors; informal debates diversify the Dining Hall exercises, and the instructor is gratuitously made the arbiter of frequent discussions of the “new learning.” Even with incorrigible and indifferent men, who remain uninfected by enthusiasm, the simple strain of inexorable requirement has proved and is proving valuable.

In the Report for 1888 Mr. Z. R. Brockway, the General Superintendent, writes of the literary training of criminals:—

After many years' experience in efforts to educate young criminals as a means of their reformation I am more and more impressed with its importance. To progress from illiteracy to a good common school education involves such changes, and increase of mind-power, that the prisoner, under similar circumstances to those of his crime, will be likely to differently govern his conduct. Possessing more of intelligence, he instinctively sees the consequences of misconduct more clearly than was possible for him previously, and he will, even without consciously willing to follow good moral conduct for the sake of morality, be more likely to follow it as the path of wisdom. It is, as the rule, idle to expect a change of character without a change of mind; and without new habitudes, which are the result of educational training, there cannot be confidently predicted any permanent change of mind. To advance a young man from the habit of blind obedience to his instincts to habitual conduct, that is self-regulated by more or less of reason, is to insure some change of character, and usually a change for the better. The general library, although of but moderate proportions, contributes not a little to such an

educational advancement. The small reference library has, the year past, been well used under pressure of a demand occasioned by the lectures, which are followed with examinations, affecting the date of the prisoner's release. The books in this library division are mainly of philosophical, mechanical, historical, and biographical character, with a few poetical works from standard authors. The librarian's distribution receipt book shows that, of these reference library books, there have been issued, by request during the year, 7588 books besides the issue of the general library books, and a weekly issue of 400 magazines and periodicals. The taste for and habit of reading that many have acquired while here, have, as we have reason to believe, followed and remained with them at home after their release. Letters from parents and friends have been received expressing their surprise and gratification that he who previous to his course of training here was restless at home, hurrying to the street after the day's work and evening meal, now since his return from the reformatory, hurries home from his work, finding for himself, and imparting to others, happiness with his books and quiet domestic enjoyments.

In the same Report Mr. Marvin, the instructor of the class in Practical Ethics, writes:—

The nature of the lessons may be expressed roughly by saying that the moral life has been taken up as the subject of study, just as wealth is taken up in political economy, but no strictly theological questions have been brought in. Such difficulties of thought regarding moral distinctions, motives good and bad, conflicts of conscience, the justice and expediency of laws and governments, as usually arise as people begin to reflect seriously upon the ways of the better social life, have been considered, besides many practical questions regarding self-control, elevation of feeling and thought, and the part of wisdom in every-day affairs. To provide a thread by which the lectures might be connected into a systematic series, they have been thrown into the form of reviews of the views in turn of the various master-minds in the department of ethical knowledge, as to the leading purpose of the wise man. Many quotations from these writers have been given, so that the instruction has afforded some information to the man of a historical or semi-philosophical character aside from its main purpose.

The aim has been not so much to impart a knowledge of stereotyped facts and ideas as to stimulate the minds of the men to obtain for themselves a true conception of the moral order of the world of which they are members, and to form true convictions as to their relations to it. On this account both sides of doubtful questions have been noticed and a decision called for. The leading consideration in the selection of lecture topics from week to week has been the needs and

interest already shown. Free discussion has always been allowed, and in some cases it has seemed profitable to devote almost the whole lesson period to it. This method not only holds the interest of the learners, even causing it at times to run quite high, but enables the instructor to carry them along more readily to desired conclusions.

The intelligence of the class is, I think, on the whole best compared to that of an advanced class in a high school, some, of course, rising above this standard, others falling below. In general, as compared with persons of similar age in the better classes outside, they seem to be bright and quick rather than deep or close students. Their remarks in the class frequently bring forth applause or signs of disapproval from their responsive fellows, and occasionally a vein of purer metal and greater depth is touched. Without much liking for books, they seem to take naturally and successfully to the study of human nature. As might be expected, they do not evince much previous reflection upon ethical matters—not as much, I think, comparing them again to those of similar age outside, as upon economic topics.

In what degree the purpose of this course of instruction has been accomplished cannot of course be determined. The examination papers as a whole, taken with the conduct of the men in class and elsewhere in the prison, seem to warrant the belief that considerable moral obscurity has been removed. There is abundant evidence that cant and hypocrisy have less to do with answers in examination than might be supposed, as the most superficial and refractory views are there expressed with almost unbounded confidence in their truth, and are marked the same as more approved views when the question calls for opinions.

In the Report for 1889 Mr. Brockway writes as follows of military drill and of physical training:—

The military drill of the inmates, which commenced a year ago, has been continued until now, and a good degree of perfection has been reached. Ten companies compose a regiment of 803 men. Every day the unemployed inmates are drilled in the forenoon; and all are drilled on Wednesday and Saturday afternoons; there is a dress parade every evening at 4 o'clock, and once a month a competitive examination is held, when all the companies compete for a set of badges to be worn for the month by the commissioned officers of the successful company. Gradually the government of the whole place is becoming a military government, largely by inmate military officers. The military organisation was made possible, indeed made necessary, by the cessation of labour in August 1888, in obedience to the Act of July of that year; but it has been found to be most serviceable in every way. The health and bearing of the men

is better, their habitual mental tone is improved, common disciplinary difficulties have been diminished or well-nigh removed, and the military government of a reformatory seems now almost indispensable to satisfactory management. Holding this view, I have, by the authority of the managers, appointed a competent military instructor, Mr. Claude F. Bryan, making thus what at first was but an experiment of military drill and government in a prison a permanent department of training and a distinguishing feature of its disciplinary regime. The regiment is fully officered with line and company officers, a good brass band with drum corps is provided, and is in daily attendance at dress parade. Courts-martial and a weekly officers' class for the study of tactics are held under the guidance of Colonel Bryan, and, in all things, Upton's tactics are closely followed.

The building for the scientific physical renovating treatment of a considerable class of the inmates is now nearly completed from funds provided by the legislature of 1888. It is 80 × 140 feet, with an open trussed roof over the whole space. The exercising hall is 80 × 100 feet, and has suspended upon the walls a gallery for pedestrian exercise. A space 40 × 80 feet of the eastern end is devoted to baths, hot, warm, and plunge, and with rooms for massage treatment, etc., etc. Complete scientific apparatus has been purchased, to be erected about the first of December, when, with the enlarged opportunities and improved facilities, as well as with the added experience and study of the physician and instructor, a most interesting, and, it is believed, valuable experiment will be made, intended to demonstrate what possible improvement may be wrought with defectives and dullards, in their mental and moral habitudes, by an improved physical tissue accomplished by wise and thorough physical treatment.

THE
CONTEMPORARY SCIENCE SERIES.

EDITED BY HAVELOCK ELLIS.

Illustrated Volumes containing between 300 and 400 pp.

THE CONTEMPORARY SCIENCE SERIES will bring within general reach of the English-speaking public the best that is known and thought in all departments of modern scientific research. The influence of the scientific spirit is now rapidly spreading in every field of human activity. Social progress, it is felt, must be guided and accompanied by accurate knowledge,—knowledge which is, in many departments, not yet open to the English reader. In the Contemporary Science Series all the questions of modern life—the various social and politico-economical problems of today, the most recent researches in the knowledge of man, the past and present experiences of the race, and the nature of its environment—will be frankly investigated and clearly presented.

First Volumes of the Series:—

THE EVOLUTION OF SEX. By Prof. PATRICK GEDDES and J. ARTHUR THOMSON. With 90 Illustrations.

ELECTRICITY IN MODERN LIFE. BY G. W. DE TUNZELMANN. With 88 Illustrations.

THE ORIGIN OF THE ARYANS. By Dr. ISAAC TAYLOR. With numerous Illustrations.

PHYSIOGNOMY AND EXPRESSION. By P. MANTEGAZZA. Illustrated.

EVOLUTION AND DISEASE. By J. B. SUTTON. 130 Illust.

THE VILLAGE COMMUNITY IN BRITAIN. BY G. L. GOMME. Numerous Illustrations.

THE CRIMINAL. By HAVELOCK ELLIS. Numerous Illustrations.

SANITY AND INSANITY. By Dr. C. MERCIER. Illustrated. [May 25.]

The following Writers, among others, are preparing

Volumes for this Series:—

Prof. E. D. Cope, Prof. G. F. Fitzgerald, Prof. J. Geikie, E. C. K. Gonner, Prof. J. Jastrow (Wisconsin), E. Sidney Hartland, Prof. C. H. Herford, Sidney Webb, Dr. Sims Woodhead, Dr. C. M. Woodward (St. Louis, Mo.), Dr. Albert Moll (Berlin), etc., etc.

LONDON: WALTER SCOTT, 24 Warwick Lane, Paternoster Row.

GREAT WRITERS.

A NEW SERIES OF CRITICAL BIOGRAPHIES.

Edited by Professor ERIC S. ROBERTSON, M.A.

MONTHLY SHILLING VOLUMES.

VOLUMES ALREADY ISSUED—

- LIFE OF LONGFELLOW.** By Prof. Eric S. Robertson.
"A most readable little work."—*Liverpool Mercury*.
- LIFE OF COLERIDGE.** By Hall Caine.
"Brief and vigorous, written throughout with spirit and great literary skill."—*Scotsman*.
- LIFE OF DICKENS.** By Frank T. Marzials.
"Notwithstanding the mass of matter that has been printed relating to Dickens and his works . . . we should, until we came across this volume, have been at a loss to recommend any popular life of England's most popular novelist as being really satisfactory. The difficulty is removed by Mr. Marzials's little book."—*Athenæum*.
- LIFE OF DANTE GABRIEL ROSSETTI.** By J. Knight.
"Mr. Knight's picture of the great poet and painter is the fullest and best yet presented to the public."—*The Graphic*.
- LIFE OF SAMUEL JOHNSON.** By Colonel F. Grant.
"Colonel Grant has performed his task with diligence, sound judgment, good taste, and accuracy."—*Illustrated London News*.
- LIFE OF DARWIN.** By G. T. Bettany.
"Mr. G. T. Bettany's *Life of Darwin* is a sound and conscientious work."—*Saturday Review*.
- LIFE OF CHARLOTTE BRONTË.** By A. Birrell.
"Those who know much of Charlotte Brontë will learn more, and those who know nothing about her will find all that is best worth learning in Mr. Birrell's pleasant book."—*St. James' Gazette*.
- LIFE OF THOMAS CARLYLE.** By R. Garnett, LL.D.
"This is an admirable book. Nothing could be more felicitous and fairer than the way in which he takes us through Carlyle's life and works."—*Pall Mall Gazette*.
- LIFE OF ADAM SMITH.** By R. B. Haldane, M.P.
"Written with a perspicuity seldom exemplified when dealing with economic science."—*Scotsman*.
- LIFE OF KEATS.** By W. M. Rossetti.
"Valuable for the ample information which it contains."—*Cambridge Independent*.
- LIFE OF SHELLEY.** By William Sharp.
"The criticisms . . . entitle this capital monograph to be ranked with the best biographies of Shelley."—*Westminster Review*.
- LIFE OF SMOLLETT.** By David Hannay.
"A capable record of a writer who still remains one of the great masters of the English novel."—*Saturday Review*.
- LIFE OF GOLDSMITH.** By Austin Dobson.
"The story of his literary and social life in London, with all its humorous and pathetic vicissitudes, is here retold, as none could tell it better."—*Daily News*.

LIFE OF SCOTT. By Professor Yonge.

"This is a most enjoyable book."—*Aberdeen Free Press*.

LIFE OF BURNS. By Professor Blackie.

"The editor certainly made a hit when he persuaded Blackie to write about Burns."—*Pall Mall Gazette*.

LIFE OF VICTOR HUGO. By Frank T. Marzials.

"Mr. Marzials's volume presents to us, in a more handy form than any English or even French handbook gives, the summary of what is known about the life of the great poet."—*Saturday Review*.

LIFE OF EMERSON. By Richard Garnett, LL.D.

"No record of Emerson's life could be more desirable."—*Saturday Review*.

LIFE OF GOETHE. By James Sime.

"Mr. James Sime's competence as a biographer of Goethe is beyond question."—*Manchester Guardian*.

LIFE OF CONGREVE. By Edmund Gosse.

"Mr. Gosse has written an admirable biography."—*Academy*.

LIFE OF BUNYAN. By Canon Venables.

"A most intelligent, appreciative, and valuable memoir."—*Scotsman*.

LIFE OF CRABBE. By T. E. Kebbel.

"No English poet since Shakespeare has observed certain aspects of nature and of human life more closely."—*Athenæum*.

LIFE OF HEINE. By William Sharp.

"An admirable monograph . . . more fully written up to the level of recent knowledge and criticism than any other English work."—*Scotsman*.

LIFE OF MILL. By W. L. Courtney.

"A most sympathetic and discriminating memoir."—*Glasgow Herald*.

LIFE OF SCHILLER. By Henry W. Nevinson.

"Presents the poet's life in a neatly rounded picture."—*Scotsman*.

LIFE OF CAPTAIN MARRYAT. By David Hannay.

"We have nothing but praise for the manner in which Mr. Hannay has done justice to him."—*Saturday Review*.

LIFE OF LESSING. By T. W. Rolleston.

"One of the best books of the series."—*Manchester Guardian*.

LIFE OF MILTON. By Richard Garnett, LL.D.

"Has never been more charmingly or adequately told."—*Scottish Leader*.

LIFE OF BALZAC. By Frederick Wedmore.

LIFE OF GEORGE ELIOT. By Oscar Browning.

LIFE OF JANE AUSTEN. By Goldwin Smith.

LIFE OF BROWNING. By William Sharp.

Complete Bibliography to each volume, by J. P. ANDERSON, British Museum.

Volumes are in preparation by Arthur Symonds, W. E. Henley, Hermann Merivale, H. E. Watts, Cosmo Monkhouse, Frank T. Marzials, W. H. Pollock, John Addington Symonds, Stepniak, Moncure Conway, Professor Wallace, Lloyd Sanders, etc., etc.

Library Edition of "Great Writers," Demy 8vo, 2s. 6d.

London: WALTER SCOTT, 24 Warwick Lane, Paternoster Row.

London : WALTER SCOTT, 24 Warwick Lane, Paternoster Row.

NEW BOOKLETS.

*Crown 8vo, in White Embossed Boards, Gilt Lettering,
One Shilling each.*

By COUNT LEO TOLSTOÏ.

WHERE LOVE IS, THERE GOD
IS ALSO.

THE TWO PILGRIMS.

WHAT MEN LIVE BY.

Published originally in Russia, as tracts for the people, these little stories, which Mr. Walter Scott will issue separately early in February, in "booklet" form, possess all the grace, naïveté, and power which characterise the work of Count Tolstoï, and while inculcating in the most penetrating way the Christian ideas of love, humility, and charity, are perfect in their art form as stories pure and simple.

ADAPTED FOR PRESENTATION AT EASTER.

London: WALTER SCOTT, 24 Warwick Lane.
